The mean pressure, temperature, etc., are deduced from the traces of the Kundsen's Barograph and from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables compiled at the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

a, dew; o, overcast; d, drizzling rain; p, passing temporary showers.

The average fall of the corresponding period for 24 years, Surveyor-General's Office		5·25

The mean pressure, temperature, etc., are deduced from the traces of the Kundsen's Barograph and from observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for the 24 hours preceding 8 A.M. of that day.

c, overcast; t, thunder; ≤, lightning; K thunderstorm; d, drizzling rain; p, passing showers; ↗ strong wind; ⊕, solar corona.

General Summary.—There was practically little or no rain throughout the Province during the week under review. In the 24-Parganas, Nadia, Jessore and Darjeeling, the rainfall was nominal. Moderately heavier rain fell only in Burdwan, Bankura, Hooghly and Cooch Behar. More rain is reported to be wanted in the districts of Burdwan, Hooghly, the 24-Parganas, Nadia, Champaran and Bhagalpur. The ploughing of lands for the next season's crops is still continuing in some districts. The sowing of paddy, jute and other *bhadoi* crops is still in progress. The prospects of standing crops are fair. In Darbhanga the number of persons on test-works is 1,715, on gratuitous relief 11,505, and on famine-relief works 23,525. Cattle-disease prevails in nine districts. The fodder and water-supply is generally sufficient. The price of common rice has risen in ten and fallen in six districts, and has remained stationary in the remaining eighteen districts of the Province.

SUMMARY OF THE RAINFALL OBSERVATIONS TAKEN IN BENGAL FOR THE MONTH OF APRIL 1907.

During April, the rainfall was fairly general over the Province. It was above the average only in the districts of Birbhum, Nadia, Murshidabad, Jessore and Khulna in South-West Bengal.

With the exception of Monghyr, all the Bihar districts received more than their normal amounts.

In Orissa the fall was well above the average, the excess varying from about ·20 inch at Angul to about 4 inches at Cuttack.

In Chota Nagpur the rainfall was slightly in excess of the normal in the districts of Hazaribagh and Palamau.

On an average South-West Bengal received 2·21 inches, Bihar 0·94 inch, Orissa 4·98 inches and Chota Nagpur 0·95 inch of rain.

Expressed in percentage figures, South-West Bengal received 118 per cent. of the normal, Bihar 154 per cent., Orissa 408 per cent. and Chota Nagpur 105 per cent.

The following table gives a summary of the rainfall data of each of the four Meteorological Divisions of the Province of Bengal for the month of April 1907:—

The mean pressure, temperature, etc., are deduced from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

≏, dew; o, overcast; t, thunder; ≤, lightning; K, thunderstorm; ⁄, strong wind; p, passing temporary showers.

RESOLUTION ON THE HOWRAH BRIDGE BUDGET ESTIMATE FOR THE YEAR 1907-1908.

No. 1339 Marine.

Government of Bengal.

MARINE DEPARTMENT.

Dated Calcutta, the 15th May 1907.

RESOLUTION.

Howrah Bridge Budget Estimate for the year 1907-08.

READ—

Letter No. 13515, dated the 28th March 1907, from the Vice-Chairman of the Commissioners of the Port of Calcutta, submitting the Budget Estimate of the Howrah Bridge for the year 1907-08.

RECEIPTS.

THE receipts for the year 1907-08 have been estimated at Rs. 2,22,000, against Rs. 2,03,594 of the previous year. The increase of Rs. 18,406 in the income is based on the expected improvement in the receipts from Railway Traffic.

EXPENDITURE.

2. The expenditure has been estimated at Rs. 2,10,600, against Rs. 1,92,772 of the preceding year. The increase in expenditure, viz., Rs. 17,828 is chiefly on account of the extra cost to be incurred on Establishment, Police, Electric Lighting, &c., required for the night openings of the bridge.

3. As a net result there is an estimated surplus of Rs. 11,400, against Rs. 10,822 in the last year.

4. The Lieutenant Governor sanctions the estimate under section 21 of Act IX (B.C.) of 1871.

By order of the Lieutenant-Governor of Bengal,

W. A. INGLIS,

Secretary.

REPORT ON THE STATE OF THE SALT MARKET FOR THE FOURTH QUARTER OF 1906-1907.

No. 2704B., dated Calcutta, the 8th May 1907.

From—Pandit Rama Ballabha Misra, M.A., Offg. Secretary to the Board of Revenue, L. P.,

To—The Secretary to the Government of Bengal, Financial Department.

I am directed to submit the following report on the state of the salt market for the fourth quarter of the year 1906-1907, comprising the months of January, February and March 1907.

Member in charge :
The Hon'ble Mr. W. C. Macpherson, C.S.I.

2. The quantity of salt of every description cleared during the quarter amounted to 28,00,087 maunds, as compared with 28,33,025 maunds in the previous quarter, and 23,76,672 maunds in the corresponding quarter of the previous year. The net amount of duty levied thereon was Rs. 35,47,980, as against Rs. 38,33,752 in the previous quarter, and Rs. 32,87,095 in the corresponding quarter of the previous year.

3. The subjoined Table I shows in detail the importations into the port of Calcutta and the total clearances of sea-imported salt during the quarter, as compared with the figures of the corresponding quarters of the two previous years :—

Compared with the corresponding quarter of the previous year and the same quarter of 1904-1905, importations were less by 23·5 per cent. and 10·3 per cent., respectively, but clearances were greater by 17·9 and 9·9 per cent.

4. Table II shows the quantity of sea-imported salt remaining in the warehouses at the close of the quarter, as compared with the preceding four quarters :—

The stocks remaining in the golas at the close of the quarter were less than in any of the previous four quarters.

5. The figures showing the despatches of salt from Calcutta by different routes during the quarter under report will be published as usual in the *Calcutta Gazette* by the Director-General of Commercial Intelligence when they are available.

6. The quantity of salt despatched during the quarter by the East Indian Railway to stations beyond Buxar amounted to 405 maunds, being the same quantity as in the previous quarter and as against *nil* in the corresponding quarter of the previous year.

7. The quantity of saltpetre salt excised in the refineries of Bengal during the quarter amounted to 8,961 maunds, as compared with 2,144 maunds in the previous quarter and 6,679 maunds in the corresponding period of the previous year.

8. The shipments of Liverpool salt during the quarter for the port of Calcutta, according to the published market reports, amounted to 42,340 tons. It is reported that the vessels noted in the margin* are on the sea bound for Calcutta with cargoes of salt from Hamburg. The quantity given against each ship is approximate only.

REGULATIONS FOR THE APPOINTMENT OF PROBATIONERS TO THE INDIAN FOREST SERVICE, 1907.

NOTIFICATION.

No. 457 T.R.—The 4th May 1907.—The following is published for general information.

E. A. GAIT,
Offg. Chief Secy to the Govt. of Bengal.

Circular No. $\frac{11\text{-F}}{131\text{-}2}$.

GOVERNMENT OF INDIA.

DEPARTMEMT OF REVENUE AND AGRICULTURE.

FORESTS.

Simla, the $\frac{20th}{26th}$ *April 1907.*

Regulations for the appointment of Probationers to the Indian Forest Service, 1907.

Note.—The Regulations for **1908** *will be the subject of separate consideration by the Secretary of State in Council. An announcement will be made concerning them in due course.*

1. *Appointments.*—The Secretary of State for India in Council will, in the summer of 1907, make **not less than eighteen appointments** of Probationers for the Indian Forest Service, provided that so many candidates are considered to be in all respects qualified.

In making these appointments, he will act with the advice of a Selection Committee.

2. *Applications for Appointment.*—Applications for appointment must be made on a printed form to be obtained from the Secretary, Judicial and Public Department, India Office, Whitehall, London, S. W., and to be returned to him not later than **Monday, the 1st July 1907**.

3. *Age Limits.*—Candidates must have attained the age of 18 years on the 1st July 1907, and not have attained the age of 22 years on the 1st January 1907.

4. *Nationality, &c.*—Every candidate must be a natural-born British subject. He must be unmarried, and if he marries before reaching India he will forfeit his appointment.

5. *General Qualifications.*—Candidates must bring evidence, for consideration by the Selection Committee, to show that they have received a good general education.

Note.—This should be understood to include, at the least, a fair knowledge of English Composition, Mathematics—up to and including Plane Trigonometry,—Latin, and either German or French. A knowledge of Greek is not necessary, but is left to the option of the candidates.

The production of School Certificates granted by the examining authorities of Universities, or of certificates that a candidate has passed the Matriculation Examination of a University, in the subjects named, or of other certificates held by the Secretary of State in Council to be equivalent, will be taken to show that a candidate satisfies the requirements of this clause.

6. *Special Qualifications desirable.*—It is also desirable that candidates should possess a knowledge of Chemistry, and also of Mechanics and Physics, as indicated in the appended Syllabus.

If any candidate be selected for appointment who does not possess a knowledge of Inorganic Chemistry, he will be required to pass in it within six months after his selection.

7. *Medical Examination.*—Those candidates who are selected as Probationers will be required to undergo a strict examination by a Medical Board at the India Office, at which particular stress will be laid on good vision and hearing.

On passing this medical examination candidates will be deemed to be Probationers for the Indian Forest Service.

8. *Period of Probation.*—The period of probation will ordinarily extend over about three years. For the first two years the Probationers will be required to undergo a special course of study at Oxford and to become members of the University if not so already. During the third year of their probation they will receive practical instruction, visiting under suitable supervision such Continental forests as may be selected for the purpose. Excursions may also be made for purposes of study during the first two years, both in term-time and in the vacations.

9. *Shortened Probation in certain cases.*—In the case of any Probationer who has passed with Honours in a public examination in Natural Science held by a University in Great Britain or Ireland, the Secretary of State in Council reserves power, should he think fit, to sanction the reduction or the period of probation to two years instead of three, under such conditions as may be determined.

10. *Charges.*—The Probationers will be required to defray all expenses for lodging, board, tuition and excursions within the limits of the United Kingdom which they may incur during the period of their probation at Oxford. To meet the cost of practical instruction on the Continent, each Probationer will be required to pay the sum of 180*l.*, in such instalments as may be determined from time to time.

Note.—Ordinarily a sum of 20*l.* will be due on the 15th June of the first year, and the balance in three instalments during the third year. In the case of Probationers whose term of study has been reduced (*see* paragraph 9), the payments must be made during the two years, as may be required.

11. *Course of Study.*—The prescribed course of study for the Probationers comprises the following subjects:—

I.—*Subjects auxiliary to Forestry.*

(1) Chemistry of soils and Elementary Organic Chemistry.
(2) Geology.
(3) Elements of Zoology and Forest Entomology.
(4) Botany.
(5) Geometrical Drawing, and Elementary Engineering.
(6) Surveying.
(7) Book-keeping, in reference to Indian Forest Accounts.
(8) German or French, as required.

II.—*Forestry, Theoretical and Practical, in all its Branches.*

Conduct and Medical requirements.—Every Probationer will be required to conduct himself during the period of probation in a manner satisfactory to the Secretary of State, and to give evidence of satisfactory progress in his studies in such manner as may be required, failing which, or in the event of serious misconduct, he will be liable to have his name removed from the list of Probationers.

A Probationer may also, at the discretion of the Secretary of State, be required from time to time to appear before the Medical Board, and, should the result be unsatisfactory, he will be liable to have his name removed from the list of Probationers.

13. *Diploma of Forestry, &c.*—During the period of probation, the proficiency of the Probationers will be tested by periodical examinations.

The Probationers who satisfy the Examiners in all these examinations, and complete satisfactorily the practical course in Forestry on the Continent, will receive the Diploma of Forestry of the University of Oxford. It is desirable that they should, if possible, also obtain a degree in the Honour School of Natural Science at the University.

14. *Appointment and Seniority.*—Probationers who obtain the Diploma of Forestry, and are of sound constitution and free from physical defects which would render them unsuitable for employment in the Indian Forest Service, will be appointed Assistant Conservators in the Indian Forest Department. Their seniority will be determined by the results of the examinations held during their two years' residence as Probationers at Oxford and the manner in which they have completed the practical course on the Continent. Probationers whose term of study has been reduced (*see* paragraph 9) will rank immediately below the successful Probationers of the previous year.

They will be allowed at the end of the period of probation to state their preference in respect to the Provinces to which they desire to be allotted; but the distribution will be made to the several Provinces according to the needs of the public service, at the discretion of the Secretary of State for India. Officers are, however, at all times liable to be transferred from one Province to another at the pleasure of the Government of India.

15. *Riding.*—Every Probationer, before proceeding to India, will be required to satisfy the Secretary of State, in such manner as may be determined, of his ability to ride. It is desirable that this evidence should be forthcoming before the Probationer proceeds to the Continent for his final period of study.

16. *Articles of Agreement, &c.*—Within a month of his nomination as Assistant Conservator, each nominee must sign articles of agreement describing the terms and conditions of his appointment; he must embark for India when required to do so by the Secretary of State, and must engage his own passage. Failure to embark at the stated time will, in the absence of satisfactory explanation, lead to forfeiture of appointment.

17. *Allowance.*—An allowance will be granted to each Probationer on signature of his agreement, varying from 50*l.* to 100*l.*, according to the degree of proficiency and diligence shown by him during his practical course upon the Continent.

18. *Salary.*—An Assistant Conservator of Forests will draw pay at the rate of Rs. 350 a month (equivalent to 304*l.* a year, when the rupee is at 1*s.* 4*d.*) from the date of his reporting his arrival in India.

19. *Promotion, Leave, Pension, and Provident Fund.*—Promotion, leave, and pension will be governed by the Regulations laid down by the Government of India, and made applicable to Forest officers, such regulations being subject to any modifications or alterations which may be made in them from time to time by the Government of India, and their interpretation in case of any doubt arising being left to that Government. A copy of the existing Regulations can be seen on application at the India Office.

Certain information regarding appointments in the upper controlling staff of the Indian Forest Service, the pay of which has been recently improved, will be found in Appendix II; a summary of information regarding Leave is contained in Appendix III; regarding Pensions and Provident Fund in Appendix IV.

INDIA OFFICE,
5th February 1907.

APPENDIX I.

(Referred to in paragraph 6.)

Syllabus of Special Subjects.

I.—CHEMISTRY.

The simpler chemical and physical properties of common substances, such as lime, salt, sugar, water, air.

The preparation (excluding details of technical processes) and properties of the following substances:—

The metals, tin, lead, iron, copper, zinc, magnesium, calcium, potassium, sodium; their simpler and more important compounds, especially such as occur naturally, and such compounds and alloys as are used in the Arts.

Hydrogen, oxygen, water, ozone, hydrogen peroxide.

Nitrogen, ammonia, ammonium salts, nitrous oxide, nitric oxide, nitrogen peroxide, nitrates.

Carbon, carbon dioxide, carbonates, carbon monoxide.

Chlorine, bromine, iodine, chlorides, bromides, iodides, chlorates, hypochlorites.

Sulphur, sulphuretted hydrogen, sulphides, sulphur dioxide, sulphur trioxide, sulphites, sulphates.

Phosphorus, phosphoretted hydrogen, phosphorus trioxide, phosphorus pentoxide, orthophosphates, phosphorus, trichloride, phosphorus pentachloride.

Silica.

The principles of chemical change; oxidation and reduction; combustion; flame. Allotropy. Methods of purifying bodies. Methods of determining the composition of air and of water. Laws of chemical combination. Diffusion of gases. The atomic and molecular hypotheses. The simpler methods of determining equivalents. General considerations used in determining molecular weights and atomic weights. Chemical notation.

Alcohol ethane, and the simpler ethylic compounds, considered in detail as typical bodies. Methylic alcohol and methane, and benzylic alcohol and toluene, considered briefly as analogues of alcohol and ethane. Characters of primary normal alcohols in general, and of their corresponding hydrocarbons.

Acetic acid, aldehyd and the simpler acetic compounds, considered in detail as typical bodies. Benzoic acid and benz-aldehyd, and formic acid and form-aldehyd, considered briefly as analogues of acetic acid and aldehyd. Characters of normal mon-acids in general and of their corresponding aldehyds.

Oxalic acid and the simpler oxalic compounds. Characters of normal di-acids in general.

Processes (i) for the detection of carbon, hydrogen, nitrogen, sulphur in organic compounds; (ii) for the estimation of carbon, hydrogen, nitrogen, inorganic componnds; (iii) for the production and analysis of the silver-salts of organic acids and the platinum-salts of organic bases; (iv) for the determination of vapour densities by the V. Meyer method.

The determination of the formula of an organic compound.

Practical Work.

The Practical Work should include:—

Simple experiments and preparations illustrating the properties of the inorganic substances named above.

Simple quantitative experiments, such as, the determination of the loss of weight on heating a body, the determination of the volume of gas evolved on the solution of zinc in acid. The volumetric estimation of acids and alkalies.

The qualitative analysis of simple salts containing not more than one of the following metals, and one of the following acid radicals:—Sodium, potassium, ammonium, calcium, magnesium, zinc, copper, iron, lead, tin, oxide, carbonate, chloride, sulphate, nitrate sulphide.

II.—MECHANICS AND PHYSICS.

Mechanics.

The principles of the lever, the inclined plane, the composition of forces, and virtual work, their experimental investigation and application to machines and other simple cases of equilibrium. Centre of gravity, couple, torque, velocity ratio, mechanical advantage, efficiency. Application to liquids and gases. Density, Boyle's law. Pump, siphon, barometer, manometer. Body moving in a straight line so that its velocity changes proportionally with the time. Body moving uniformly in a circle. Motion of pendulum-bob. Momentum, force, impulse of a force, energy, conservation of energy.

Heat.

Simple thermometry. Simple methods of determining latent heats; specific heats; expansion of gases, liquids and solids; vapour pressures. Change of state. Simple experiments on conduction, convection and radiation. Mechanical equivalent of heat.

Sound.

Direct determination of the velocity of sound in air and in water; the effect of change of temperature on the velocity of sound in air; mode of propagation of sound in air. Simple methods of determining the pitch of a note. Chracteristics of musical sounds.

Light

Laws of reflection and refraction. Simple methods of determining refractive indices, and the focal lengths of mirrors and lenses. The simplest form of the compound microscope and of the astronomical telescope. Dispersion, the spectroscope, spectra of different kinds. Simple photometry. Elementary notions of the determination of the velocity of light.

Electricity and Magnetism.

Properties of electrified bodies. Methods of electrification. Electric induction The gold leaf electroscope. Elementary quantitative notions of electrical quantity, capacity, potential and specific inductive capacity. Condensers. Properties of magnets. Methods of magnetization. Magnetic induction. Simple methods of determining the declination and dip at a place and of comparing magnetic fields and moments. The construction of the batteries of Volta, Daniell, and Leclanche, and their theory. The secondary battery. The physical and chemical action due to a current. Simple galvanometers, ammeters, and voltmeters. Measurement of current-strength, electromotive force and resistance. The production of currents by electro-magnetic induction. The broad principles of the induction-coil and dynamo.

Practical Work.

Simple experiments illustrating the principles stated above.

APPENDIX II.

LIST OF APPOINTMENTS IN THE UPPER CONTROLLING STAFF OF THE INDIAN FOREST SERVICE.

NOTE.—*This list shows only the existing number of sanctioned appointments which is liable to alteration at any time. APPENDIX III.

LEAVE.

1. The following is a summary of the principal regulations relating to the leave admissible to officers appointed to the Indian Forest Service by the Secretary of State from the United Kingdom:—

Long Leave.

2. Furlough is admissible to an aggregate amount of six years during the service. The amount "earned" is one-fourth of an officer's active service, and the amount "due" is that amount less any enjoyed.

* These 267 appointments are assigned to the various provinces as follows:—Burma, 71; Madras, 39; Bombay, 31 Central Provinces, 26; Bengal, 18; United Provinces, 18; Punjab, 14; and Eastern Bengal and Assam, 10.

† These draw an allowance of Rs. 150 a month in addition to their salary.

NOTE.—Under the improved scale of salary shown above, no Exchange Compensation Allowance is granted.

3. Furlough without medical certificate can, if due, be generally taken, after eight years' active service, and again after three years' continuous service. It is limited to two years at a time.

4. Furlough on medical certificate may be granted (*a*) to an officer who has rendered three years' continuous service, for not more than two years, but capable of extension up to three years; and (*b*) to an officer who has not rendered three years' continuous service, up to one year in any case, and up to such longer period, if any (but not exceeding two years in all), as the officer may have furlough "due" to him.

5. The allowances admissible during furlough are :—

(1) During the first two years of furlough without medical certificate and during so much of furlough with medical certificate as may be "due,"—half average salary, subject to certain maximum and minimum limits.

(2) After the expiration of the period for which the foregoing allowances are admissible,—one quarter of average salary, subject to certain maximum and minimum limits.

Short Leave.

6. Privilege Leave is a holiday which may be granted to the extent of one-eleventh part of the time that an officer has been on duty without interruption; and it may be accumulated up to three months, earned by 33 months' service. During privilege leave, the officer retains a lien on his appointment, and receives the salary which he would have received if on duty. An interval of not less than six months must elapse between two periods of absence on privilege leave.

Privilege Leave may be prefixed to furlough special leave, or extraordinary leave without allowances The whole period of leave thus taken in combination is known as combined leave. Combined leave may not be granted for a period of less duration than six months, nor, except on medical certificate, may it be extended beyond two years.

7. Special Leave may be granted at any time for not more than six months, with intervals of six years' service; allowances, calculated as during furlough, are given during the first six months only, whether taken in one or more instalments. This leave is included in the aggregate of six years' furlough admissible.

8. Extraordinary Leave without allowances may be granted in case of necessity, and, except in certain specified cases, only when no other kind of leave is by rule admissible. It may be granted in continuation of other leave.

9. Subsidiary Leave in India for a minimum of 10 days, usually with half average salary, is granted to an officer proceeding on or returning from leave out of India, or on retirement, to enable him to reach the port of embarkation or to rejoin his appointment. It is admissible only at the end and not at the beginning of combined leave.

10. Short Leave is also granted to enable officers to appear at examinations, etc.

General Rules.

11. Leave of absence, whether on furlough or on privilege leave, can never be claimed as of right and is given or refused at the discretion of Government.

12. After five year's continuous absence from duty, an officer is considered to be out of the employment of Government.

13. When leave allowances are paid at the Home Treasury, or in a Colony where the standard of currency is gold, rupees are converted into sterling at the rate of exchange fixed for the time being for the adjustment of financial transactions between the Imperial and Indian Treasuries, unless any other rate has been exceptionally authorised. But for the present the rate of conversion is subject to a minimum of 1*s.* 6*d.* to the rupee.

APPENDIX IV.

Pensions and Provident Fund.

1. The following is a summary of the principal pension rules applicable to officers of the Indian Forest Service appointed by the Secretary of State from the United Kingdom.

An officer of the Indian Forest Service is eligible for a pension on voluntary retirement after completing 20 years' qualifying service or attaining the age of 55 years. If at an earlier date he is compelled to retire from the service through ill-health not occasioned by irregular or intemperate habits, he becomes eligible for an invalid pension or a gratuity according to the length of his service.

The amount of pension or gratuity is regulated as follows:—

After a service of less than 10 years an invalid gratuity not exceeding one month's emoluments for each completed year of service.

After a service of not less than 10 years an invalid pension not exceeding the following amounts:—

Years of completed Service.	Maximum Limit of Pension.	
	Rs.	Rs.
10	1,000 a year or	83⅓ a month.
11	1,400 „ „	116⅔ „
12	1,800 „ „	150 „
13	2,200 „ „	183⅓ „
14	2,690 „ „	216⅔ „
15, 16, 17, 18, 19	3,000 „ „	250 „

After service of not less than 20 years, a retiring pension not exceeding the following amounts.—

Years of Completed Service.	Scale of Pension. Sixtieths of average Emoluments.	Maximum Limit of Pension	
		Rs.	Rs.
20 to 24	30	4,000 a year or	333⅓ a month.
25 and above		5,000 „ „	416⅔ „

Officers who have shown special energy and efficiency during an effective service of three years as Inspector-General of Forests or Conservator (First Grade) may, at the discretion of the Government of India, be allowed an additional pension of Rs. 1,000 a year.

Subject to certain prescribed conditions rupee pensions are now issued to pensioners residing in countries where the Indian rupee is not legal tender at the rate of exchange of 1s. 9*d.* the rupee.

2. A Provident Fund has also been established on the following basis:—

(*a*) The contribution is compulsory up to 5 per cent. on salaries, with voluntary contributions of a further 5 per cent.; while on leave, an officer may subscribe any sum he pleases, subject to a minimum of 5 per cent., on his leave allowances and a maximum of 10 per cent. on his salary.

(*b*) Compound interest on such payments is annually credited by Government to each officer subscribing, the rate being at present 4 per cent. per annum.

(*c*) Receipts and payments are made in rupees only.

(*d*) The sum which will thus accumulate to the credit of an officer to be his absolute property, to be handed over to him unconditionally on quitting the service; or, in the event of his death before retirement, to his legal representatives.

For Office use only.

FINAL FORECAST OF THE OILSSED CROPS OF BENGAL, 1906-1907.

THE following note is published for general information.

E. A. GAIT,
Offg. Chief Secy. to the Govt. of Bengal.

The 17th May 1907.

DEPARTMENT OF AGRICULTURE, BENGAL.

FINAL FORECAST OF THE OILSEED CROPS OF BENGAL, 1906-07.

[On an average of the five years ending 1904-05, the areas under linseed, rape and mustard and *til* in the territory to which this forecast relates, have represented some 22·7, 13·4 and 5·9 per cent., respectively, of the total area under these crops in British India.]

Explanatory.—The present forecast deals with the final estimates of the area and outturn of different kinds of oilseeds, both *bhadoi* and *rabi*, grown in this Province, of which the chief are linseed, mustard, rape, sesamum (*til*), castor and niger oilseed (*sirguja*).

2. *Character of the season.*—As reported in the preliminary forecast, the rainfall in October was above the average in the Sonthal Parganas, Sambalpur, Cuttack, Puri, Ranchi, Manbhum and in all the districts of Lower Bengal, except Khulna. In the rest of the Province, it was deficient. In November, no rain fell in the districts of the Patna Division and in Purnea, but some light showers were received in the rest of the Province. In December, light showers fell only in Orissa and in parts of Chota Nagpur. There was little or no rain in January. In February the rainfall was fairly general throughout the Province, the fall being heavy in Bihar, Orissa and Chota Nagpur. In March, the rainfall was heavy. The crops suffered in Lower Bengal from excessive rain at the time of sowing, and from absence of rain in Bihar at the period of early growth. Rain accompanied with hail-storms also damaged the crops towards the harvesting time in some districts. Injury was done by insect pests in Monghyr and Cuttack. On the whole, the season was not very favourable.

3. *Area sown.*—The total normal area under different oilseeds, after revision by District Officers, is now estimated at 2,421,400 acres. The area actually sown this year is reported to have been 2,205,000 acres, against 2,203,500 acres sown last year

4. *Character of the crop.*—It will be seen from Appendix I attached that two districts, viz., the Sonthal Parganas and Sambalpur, estimate crops of 100 and 105 per cent. respectively; five districts report 90 to 99 per cent. of a

normal outturn; nine districts, 80 to 89 per cent.; seven districts, 70 to 79 per cent.; five districts 60 to 69 per cent.; and the remaining five districts, 59 per cent. or under. From the district reports, it would appear that since the publication of the preliminary forecast, prospects have improved in ten districts, remained stationary in seven, and deteriorated in the remaining districts.

The outturn of the different kinds of oilseed crops for the Province as a whole amounts, according to the district officers' figures, to 75 per cent. of an average crop, against 78 per cent. estimated in the preliminary forecast. Looking to the insufficient reasons given for the low estimates made in several cases, and to the general tendency to understate the outturn as compared with the normal, I would increase the estimate to 80 per cent. if an average outturn.

5. *Gross outturn.*—Taking the latter figure, and accepting 6 maunds per acre to be the normal rate of outturn for linseed, rape, and mustard, and $4\frac{1}{4}$ maunds per acre for other oilseeds, the gross yield of all the oilseed crops for this Province during the year 1906-07 works out to 347,000 tons, against 305,400 tons in the preceding year.

Director of Agriculture, Bengal.

FINAL FORECAST OF THE WHEAT CROP OF BENGAL, 1906-07.

THE following note is published for general information.

E. A. GAIT,
Offg. Chief Secy. to the Govt. of Bengal.

The 17th May 1907.

DEPARTMENT OF AGRICULTURE, BENGAL.

FINAL FORECAST OF THE WHEAT CROP OF BENGAL, 1906-1907.

[On an average of five years ending 1904-1905, the area under wheat in the territory to which this forecast relates has represented some 5·0 per cent. of the total area under wheat in India.

The ratio of irrigated wheat acreage to total wheat acreage (*a*) in British India and (*b*) in the territory now reported on, has, in the five years ending 1904-1905, averaged (*a*) 38·2 per cent. and (*b*) 2·4 per cent., respectively.]

Preliminary.—Wheat is grown chiefly in the Bihar districts and in Murshidabad, Nadia, Hazaribagh and Palamau.

2. *Character of the season.*—The reports received from District Officers show that the date of sowing was generally normal. There was, however, insufficient rain for the early growth of the crop in many districts, especially in Bihar. In February and March, on the other hand, when the crop was ripening and being harvested, cloudy weather, rain and hail did widespread damage. From Monghyr it is also reported that caterpillars injured the crop. The season on the whole was unfavourable.

3. *Area sown.*—The normal area under wheat, as reported by District Officers, is estimated at 1,247,300 acres, while the area sown this year is returned at 1,402,600 acres against 1,248,300 acres sown last year. This increase is partly due to the fact that wheat was sown in some districts on lands on which the rice crop has been destroyed by floods.

4. *Character of the crop.*—From Appendix I, in which the district returns have been tabulated, it will be seen that not a single district returns a normal crop; only two districts, viz., Bankura and Sambalpur, return crops between 90 and 95 per cent.; five districts report 80 to 89 per cent.; eleven districts, 70 to 79 per cent.; four districts, 60 to 69 per cent.; and five districts, 50 to 59 per cent. crops. In Nadia and Saran only 48 per cent. of an average crop is estimated. Since the publication of the preliminary forecast in February last, prospects have improved in five districts, remained unchanged in six, and deteriorated in the remaining districts. The provincial outturn, according to

the final estimates of the District Officers, amounts to 64 per cent. of a normal crop, against 77 in the preliminary forecast. The decrease of 13 per cent. is chiefly due to a large reduction in the estimates in most of the Bihar districts, where undoubtedly conditions have been particularly unfavourable. In Nadia, Murshidabad, and Palamau, however, the estimates appear to be too low. It is evident that the conception of an average crop as the basis on which to estimate the percentage of the season's outturn is not always clearly present, and it is probable that the calculation is still often made in respect not of a really average crop, but of a crop that would be regarded as satisfactory.

5. *Gross outturn.*—According to the returns now received, the gross yield of wheat in the province works out to 388,700 tons, as compared with 396,600 tons last year.

6. *Food-stocks and the prices of food-grains.*—The harvests of the year are generally reported to be below the average; and the prices of food-grains have ruled much higher than usual. The estimated outturn of the three harvests, viz., *bhadvi*, winter rice, and *rabi*, was 71, 78 and 76 per cent. respectively. From most districts the stocks in hand are reported to be not plentiful. These reports are corroborated by the figures of imports into Calcutta and exports therefrom, which show a remarkable decrease.

1	2	3	4	5	6	7	8	9	10	11	12	13
								Acres.		Acres.		
24-Parganas ...	3,102,400	1,079,200	...	300	1	100	...	...	...	...	.....	These has been no cultivation of wheat to this district this year.
Nadia ...	1,757,600	1,442,800	53,100	27,300	31,100	54	48	Not cadastrally surveyed			1st November	The sowing was normal. The decrease in the outturn as compared with the figure shown in the first forecast is due to want of timely rainfall.
Murshidabad	1,571,200	962,600	60,300	60,000	60,000	53	57	...	...	...	Latter part of October.	Want of rain in December and January affected the crop to some extent; hence the decrease in the outturn. The date of sowing was normal. The normal area has been revised.
Jessore ...	1,672,000	1,191,600	1,700	1,000	1,100	53	...	...	...	...	1st November to 15th November.	Heavy rainfall in October injuriously affected the crop. The estimate of outturn may however be raised to 70 per cent.
Pabna ...	1,338,400	1,062,100	135,600	117,800	117,800	70	57	73,104	1900-01	1,951	Early in October	The short percentage of outturn is due to the absence of rain since the time of sowing of the crop and fall of rain towards the harvesting time. The sowing was at the normal time.

Gaya	3,675,600	2,147,800	167,000	143,300	166,800	78	80	514,592	1893 to 1895 and 1903 to 1905.	23,172	1st October	The weather was favourable in the beginning, but rainfall in February and March last caused some damage to the crop, and this accounts for the decrease in the outturn. The figure given generally is 75, but from what I have seen in the district, I think the damage done is exaggerated, and have, therefore, raised it to 80 per cent. The date of sowing was normal.
Shahabad ...	2,758,720	1,841,800	122,000	122,050	170,500	75	65	...	...	...	15th October	The decrease in the outturn is due to heavy rain in February and March. The date of sowing was normal.
Saran	1,711,365	1,267,200	77,500	77,300	72,900	90	46	1,533,435	1893 to 1901	77,323	10th October	Since the submission of the preliminary forecast the weather has been cloudy and unfavourable to the crop. Constant fall of rain at the time the crop was in flower has affected the proper ripening of the crop to a considerable extent, and in the middle of March hail in some places did damage. The date of sowing was normal.
Champaran ...	2,259,240	1,447,600	106,300	95,200	98,200	73	88	2,259,240	1892 to 1899	103,360	End of September and beginning of October.	The outturn is better than that estimated in the preliminary forecast owing to the rain that fell in February and in the beginning of March.
Muzaffarpur ...	1,902,467	1,627,000	69,700	76,980	89,760	83	78	1,942,400	1892-93 to 1898-99.	69,760	October	The general condition of the crop has not been quite good owing to want of timely rain. Slight damage has also been done by rain and hail in March at places. The estimated outturn of the district may be raised to 70 per cent.
Darbhanga ...	2,142,990	1,078,600	53,760	67,200	90,300	84	50	2,142,600	1896 to 1903	53,760	October	The increase in the area sown this year is due to floods in August which destroyed the paddy crop. Want of rain injured the crops to a great extent. The date of sowing was normal.
Monghyr ...	2,810,000	1,562,800	150,000	150,000	(a) 243,000	78	69	925,552	1900 to 1904	103,625	1st week of October ...	The low outturn is due partly to damage done by caterpillars to the early sown crops in North Monghyr and partly to the unseasonableness of the weather. There was no rain in December and January when it was wanted, and there was heavy rain in February and March which did considerable damage to the ripening crops. The large increase in area is partly due to the fact that wheat was put down in fields which lost their paddy crop in the floods of August and September 1906, but Column 4 is probably an underestimate, as the cadastral figures of North Monghyr prove. (a)

(a) This area is in excess of the area reported in the Preliminary forecast. Later information showed that a larger area was sown with wheat this year.

District.	Total area of district in acres.	Total area estimated to be under cultivation in acres.	Approximate normal area under wheat in acres.	Approximate area under wheat last year (1905) in acres. General Summary.—Rain was general in Bengal Proper and in Chota Nagpur, but scattered in Bihar and Orissa. The fall was light in most places. Moderate rain was received in Midnapore, Murshidabad, Jessore, Purnea, Darjeeling and Cooch Behar. The preparation of lands for the next season's crops still continues. Sowings of paddy and jute are in progress. More rain is wanted in parts of Burdwan, Bankura, Midnapore, Hooghly, the 24-Parganas, Nadia, Champaran and Muzaffarpur. In Darbhanga the number of persons on test-works is 2,198, on gratuitous relief 11,220, and on famine-relief works 25,390. Cattle-disease is reported from six districts. Fodder and water are generally sufficient. The price of common rice has risen in thirteen and fallen in four districts.

The mean pressure, temperature, etc., are deduced from the traces of the Kundsen's Barograph from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All thermometers are verified, and the readings have been corrected to a standard constructed and verified at Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day for 24 hours preceding 8 A.M. of that day.

☁, dew; o, overcast; t, thunder; <, lightning; R, thunderstorm; ⁄, strong wind; d, drizzling rain.

RESOLUTION ON THE REPORT ON THE ADMINISTRATION OF THE JAIL DEPARTMENT FOR THE YEAR 1906.

No. 711J.—D.

JAILS.

Dated Darjeeling, the 13th May 1907.

RESOLUTION.

READ—

The Report on the Administration of the Jail Department for the year 1906.

Read also—

The Reports for the years 1904 and 1905 and the Resolutions of Government recorded thereon.

THE report under review has been submitted by Major W. J. Buchanan, who was in charge of the department throughout the year, except for the period between the 13th July to the 17th October, when he was on privilege

leave and special duty in England. During this interval, Mr. E. W. Payne, Superintendent of the Alipore Central Jail, acted as Inspector-General.

2. The total population of the jails of Bengal, which was 14,872 at the beginning of the year, amounted to 15,695 at its close. The daily average population was 15,774 as against 14,934 in 1905.

3. The death-rate calculated on the daily average numbers of all classes of prisoners stood for all the jails at 23·7 per mille. It is satisfactory to note that this figure is below the decennial average (26·5), and, excluding the figures for the years 1903 and 1904, is the lowest reported since 1899. In 1905 four jails showed a death-rate of more than 40 per mille, viz., Burdwan, Purulia, Chaibasa and Midnapore. In the past year, the death-rate of Burdwan dropped to 24·6, while in Chaibasa also there was a slight improvement on the previous year's figures. On the other hand the still further increase in the mortality of the Purulia and Midnapore Jails is to be regretted, the figures having risen from 46·6 to 53·5 per mille in the former and from 45 to 55·2 per mille in the latter. The increase in Purulia is attributed to ill-health among prisoners when brought in and still under trial, and to an outbreak of pneumonia; but it was also partly due to overcrowding; and the new barrack must be constructed without delay. The Midnapore Jail has for many years had the reputation of being the most unhealthy jail in Bengal. The principal causes of mortality are dysentery and diarrhœa, which are common diseases in the district. Improvement may be expected from the radical improvements in the ventilation of the wards and workshops, which are now being carried out. The result of the special investigation into the nature of the fatal dysentery in this jail, which is now being carried on by Captain Forster, I.M.S., will be anxiously awaited. The high percentage of mortality in the Darjeeling and Naya Dumka jails is explained in the report.

4. During the year under report 271 prisoners suffering from tuberculosis were admitted to jail hospitals, and there were 64 deaths; whereas the figures for last year were 240 and 59 respectively. The prevalence of the disease in the province is becoming more generally recognized. Prisoners bring it with them to jail. The efforts of the Inspector-General to treat patients on modern principles, and to separate them from the healthy, have the warm approval of the Lieutenant-Governor. Success cannot be obtained until the Central Lunatic Asylum is established. When this is done, the Asylum at Berhampore will be taken over for use as a central jail, and the present jail at Berhampore will be available for tuberculous patients.

5. The difficulty of inadequate accommodation had again to be contended with. In 19 jails there was an overcrowding of the convict population, and in the undertrial wards of 15 jails the capacity was found insufficient. His Honour is however pleased to notice that the experiment referred to in paragraph 50 of the Inspector-General's report for last year has been a success, and that the more rapid transfer of convicts to district jails has relieved the congestion in the subsidiary jails. The overcrowding in undertrial wards is serious, if it is at all frequent or long continued. It is especially bad to place undertrial prisoners with convicts, as was done in a few cases.

6. In the Resolution on the report for 1905 Government recognised that the demands for a better classification and separation of the various classes of prisoners had rendered the question of accommodation more intricate; but it is noteworthy that several projects for providing segregation wards have since been approved, and that a number of these wards is already under construction.

7. The manufactures on which the convicts have been employed during the year show satisfactory results, and the profit per head, after taking into consideration stock and liabilities at the beginning and close of the year, amounts to Rs. 46¾ as compared with Rs. 40½ in 1905. Against this the total cost of the jails, excluding public works charges, has increased from Rs. 12,81,908 to Rs. 14,15,540, and the cost per prisoner from Rs. 85-13-4 to Rs. 89-11-9. The increase occurred chiefly in dietary charges, being due to the prevailing high prices of grain.

8. The total number of offences committed by convicts was 25,268 as against 26,416 in 1905, while the punishments inflicted by Superintendents

numbered 25,384 as against 26,606. Three thousand and sixty-five major penalties were imposed. The Lieutenant-Governor notices with satisfaction the further decrease in corporal punishments. During the year under report there were only 113 such punishments as against 145 in 1905 and 182 in 1904. Eleven convicts escaped during the year, 3 from inside and 8 from outside the jails; but all except one are reported to have been recaptured.

9. The statistics of the past year show that out of a total of 25,237 jail offences, no less than 14,319 or 57 per cent. were committed by B class convicts, and 10,918 or 43 per cent. by A class or first offenders. The figures also show that a relatively greater proportion of the more serious offences was committed by the habituals. These facts emphasise more strongly the necessity already recognized of separating the two classes of offenders. Much has already been done to make this separation possible, but much still remains to be done. The Inspector-General raises interesting questions in dealing with this matter. The Lieutenant-Governor is at present giving his careful consideration to it as well as to the cognate subject of the treatment of juvenile and adolescent convicts. Special instructions will shortly be issued to Magistrates with reference to the detention, trial and punishment of children. The segregation of juveniles and of youths between the ages of 16 and 23 has formed the subject of suggestions by the Inspector-General aiming at the establishment of separate juvenile depôts in the central jails and the reservation of a special prison for adolescent prisoners. These suggestions are receiving careful attention.

10 The Lieutenant-Governor agrees with the suggestion of the Inspector-General that it is desirable to offer more privileges to all classes of prisoners, to be earned only by regular industry and good behaviour; and that it is especially necessary to offer such privileges to the A class prisoners or first offenders, who are often employed in jails in the capacities of watchmen and gang overseers. The detailed report of the Inspector-General on this matter is awaited; but His Honour is inclined to think that so long as the two classes of prisoners are placed side by side in the jails little can be done to ameliorate the condition of the casual offender. The Lieutenant-Governor is therefore considering the advisability of setting aside one central jail for habitual and especially dangerous criminals. If the proposal to modify the regulations for the transportation of convicts to the Andamans is carried into effect, the necessity for providing a separate jail for B class offenders will become all the more pressing.

11. In his last report the Inspector-General remarked that discontent prevailed among the warders owing to the inadequacy of their pay and the illiberal nature of the sick leave rules. The large number of resignations by this class of officers during the past year demands a reconsideration of the question of their pay and privileges. Government will examine any proposal which the Inspector-General may desire to make on the subject.

12. The average period of detention of undertrial prisoners was 15·21 days against 14·70 days in 1905. In six subsidiary jails the period exceeded 20 days, while at Gobindpur in the Manbhum district the average period of detention was 31·56 days. The variations in the statistics for the different districts are remarkable; and District Magistrates will be asked (where necessary) to take steps to prevent undue detentions in the future.

13. The Lieutenant-Governor hails with great satisfaction the establishment of a "Prisoners' Aid Society" in Calcutta. He trusts that success in the modest scheme now adopted may lead to the rapid development of its operations. He regards with warm approbation the deep interest in this subject taken by the Inspector-General, which has been greatly stimulated by what Major Buchanan saw in England of the work done by non-official agencies to assist prisoners after release.

14. The Lieutenant-Governor notices the commendations bestowed by the Inspector-General upon certain officers of the Department. He would suggest that the Inspector-General should call for full explanations from the few officers who have clearly omitted to perform prescribed duty. His Honour

thanks Major Buchanan for his successful administration of the department during the past year and for an interesting and suggestive report.

ORDER.—Ordered that a copy of this Resolution be forwarded to the Inspector-General of Prisons for information and guidance.

Ordered also that a copy of this Resolution and a copy of the Report be submitted to the Government of India in the Home Department.

Ordered also that the Resolution be published in the *Calcutta Gazette*.

By order of the Lieutenant-Governor of Bengal,

W. S. MILNE,

Offg. Secy. to the Govt. of Bengal.

RESOLUTION ON THE BUDGET ESTIMATE OF THE COMMISSIONERS OF THE PORT OF CALCUTTA FOR THE YEAR 1907-1908.

No. 1433Marine.

Government of Bengal.

MARINE DEPARTMENT.

Dated Calcutta, the 28th May 1907.

RESOLUTION.

Resolution on the Budget Estimate of the Commissioners of the Port of Calcutta for the year 1907-1908.

READ—

Letter No. 13516, dated the 28th March 1907, from the Vice-Chairman of the Port Commissioners, Calcutta, submitting for sanction the Budget Estimates of the Commissioners for the year 1907-1908.

CAPITAL ACCOUNT.

THE Budget provides Rs. 58,00,000 for capital outlay during the year. Of this amount the sum of Rs. 25,00,000, is allowed for expenditure on the acquisition of land for the future extension of the Kidderpore Docks. The sum of Rs. 33,00,000, will be spent on new works and on those that are in progress.

2. The following statement shows the principal works which are now in progress :—

4. Want of funds has compelled the Commissioners to proceed more slowly with some works than they would otherwise desire, and to defer others the desirability of which is admitted.

5. Within the last seven years the expansion of trade has been so rapid that it has been found necessary largely to increase the accommodation. The subject has received careful consideration at the hands of the Commissioners, who have expended in the above period no less a sum than Rs. 260 lakhs, of which nearly 100 lakhs has been expended in the year 1906-07. Although large additions are being made to the Capital Debt, the financial position of the Trust is strong owing to the expansion of trade and to the remunerative character of the works constructed. This may be briefly illustrated by the fact that the income of the Trust, during the current year, will be largely increased, and has been estimated at Rs. 109 lakhs while the Capital Debt on the 31st March 1907 stood in round numbers at Rs. 7,00,00,000, the assets, exclusive of the Strand Bank lands, on which a high value may be set, being taken at Rs. 9,00,00,000.

Revenue Account.

6. A general summary of the estimates submitted by the Commissioners is given below :—

	Estimate for 1907-08.
	Rs.
Income—	
I.—Control	2,800
II.—Jetties	13,97,000
III.—Tea Warehouse	1,71,500

XII.	Ferry service	66,000	
XIII.	River dues	17,66,600	
	Miscellaneous receipts	75,041	
	Total ...		1,09,15,281
Expenditure—			
I.	Control	7,16,984	
II.	Jetties	7,51,316	
III.	Tea Warehouse	1,08,953	
IV.	Petroleum wharf	36,239	
V.	Inland vessels' wharves	1,57,786	
VI.	Rentable lands and buildings	1,15,426	
VII.	Port	5,46,118	
VIII.	Port Approaches	6,63,269	
IX.	Railway	8,45,489	
X.	Wet Docks	28,87,253	
XI.	Dry Docks	73,063	
XII.	Ferry service	75,416	
	Provision against unforeseen expenditure and minor Works chargeable to Revenue	1,01,989	
	Interest and sinking fund charges	36,33,980	
	Total ...		1,07,15,281
	Estimated surplus ...		2,00,000

7. The reduction of rates charged to the trade and shipping which have been granted within the last five years would, if calculated on the present traffic excluding coal, amount to Rs. 10 lakhs per annum. The Commissioners consider that the estimated surplus of Rs 2,00,000 which is a small margin and is subject to fluctuations of trade should be allowed to stand. They therefore intend to defer the question of further reduction in rates.

8. Excluding the interest and sinking fund charges the expenditure is estimated at Rs. 70,81,301, against Rs. 59,21,403 in the previous year. An abstract comparing the estimates of the two years is given below :—

	1907-08. Rs.	1906-07. Rs.
Establishment	25,21,876	22,27,824
Stores	6,14,250	4,02,050
Maintenance	11,21,070	8,86,057
Labour	19,63,000	16,00,000
Miscellaneous charges	7,78,899	7,04,804
Police	80,217	68,668
Unforeseen expenditure	41,989	32,000
New minor works	60,000	.....
	70,81,301	59,21,403
Interest and sinking fund charges ...	36,33,980	30,30,530
Total ...	1,07,15,281	89,51,933

9. There is an increase of expenditure under all heads. This is due to the expansion of the operations of the Trust.

10. In exercise of the powers vested in him by section 71 of the Calcutta Port Act, 1890, the Lieutenant-Governor approves of the estimate of the income and expenditure of the Commissioners for the year 1907-08.

By order of the Lieutenant-Governor of Bengal,

W. A. INGLIS,

Secretary to the Government of Bengal.

ANNUAL REPORT OF THE ROYAL BOTANIC GARDEN, CALCUTTA FOR THE YEAR 1906-07.

No. 295T.—Medl., dated Darjeeling, the 20th May 1907.

From—H. J. McIntosh, Esq., I.C.S., Secy. to the Govt. of Bengal, Municipal Dept.,
To—The Secretary to the Government of India, Dept. of Revenue and Agriculture.

I AM directed to submit, for the information of the Government of India, a copy of the Annual Report of the Royal Botanic Garden, Calcutta, for the year 1906-07.

2. The thanks of the Lieutenant-Governor have been conveyed to Captain A. T. Gage, I.M.S., and his subordinates for the good work done by them during the year.

ANNUAL REPORT OF THE ROYAL BOTANIC GARDEN, CALCUTTA, AND THE LLOYD BOTANIC GARDEN, DARJEELING, FOR THE YEAR 1906-1907.

In the Royal Botanic Garden, Calcutta, the most important outdoor work has been the commencement during the latter part of the year and partial carrying out of a survey of the Garden on an adequate scale as a preliminary to the preparation of a proper catalogue and the institution of an accurate system of records of the plants cultivated in it. Beyond this no specially large work was carried out, but various minor improvements were accomplished or initiated. A considerable clearance was made in the north-west corner of the Garden, partly to allow the 'Gold-Mohur' trees, which were planted several years ago along the Roxburgh Avenue eastward of the Roxburgh Monument and were suffering from lack of space, to recover themselves, and partly to have a piece of ground available for a representative collection of economic plants. A fair amount of work still remains to be done before the Economic Garden can be started, but the immediate result has been a distinct improvement in the appearance of that part of the Garden. Through the courtesy of the Hon'ble Mr. A. A. Apcar, C.S.I., the avenue of Royal Palms between the Water-gate and Kyd's Monument was relaid with several tons of gravel-sand obtained from Kowloon. The improvement of the river bank, which is very unsightly in several places, has been taken in hand, and towards the end of the year arrangements were made for the supply of a quantity of stone-ballast to be deposited near the Superintendent's quarters, where the bank is particularly in need of repair. The scheme of improvement of the main nursery was appreciably advanced during the year, and it is hoped that the coming year will see it completed. The centre beds of the orchid-house were demolished and relaid with distinctly better effect on the general appearance of the house. The Garden roads have been kept in repair, but the advent of the motor-car with its dust-throwing propensities will render it necessary in the near future to adopt some more effective means of watering the roads than the present slow and primitive methods.

2. *Economic.*—In accordance with the intention mentioned in last year's report, the plot experiments with 'Sunn hemp' (*Crotalaria juncea*) were repeated, and this time with great success as far as development of the plants and appearance of the fibre were concerned. The fibre was sent to London for valuation, but up to the time of writing no report has been received. It is not proposed to continue this experiment longer or to initiate any similar one during the coming year. Circumstances have greatly altered since the days when the Calcutta Botanic Garden was the chief place in India for experimental economic work. Now that there are the imperial and the various local agricultural departments, each provided with an expert staff, land and laboratories for the investigation of economic problems, there does not appear to be the same necessity as formerly existed for the very restricted staff of the Calcutta Botanic Garden spending time—to the possible neglect of pure botanical research—on work which could be done now under much more satisfactory conditions elsewhere. But because there is now generally speaking no necessity for the Garden to undertake economic experiments, it is

not to be implied that it is to cease to take interest in economic plants. A large field of usefulness still remains in the exchange of seeds and plants of economic importance between India and other countries, and such exchanges formed quite a considerable part of the year's work. To mention a few instances, consignments of *Bambusa Tulda*, one of the most useful bamboos grown, were sent to the United States Department of Agriculture and to German East Africa for experimental cultivation; sweet potatoes of the best varieties obtained through the Imperial Agricultural Department were sent to several foreign countries; cinchona seeds were sent to California, lemon grass to Kew *Gynocardia odorata* to the French Colonial Bureau, etc. Amongst the useful plants or seeds introduced for cultivation in the Garden or in other parts of India were *Apocynum Venetum* a fibre yielding plant—from the Botanic Garden of Tiflis; varieties of *Sorghum* from the Bureau of Agriculture of the Philippine Islands; *Funtumia elastica*, a rubber-yielding plant—from the Botanical Department of Trinidad, *Canhamo brasiliensis*, the so-called Brazilian linen-plant—through the Director-General of Commercial Intelligence. As usual seeds of timber and other useful trees were distributed very widely.

3. *Herbarium.*—The Curatorship of the Herbarium has been vacant throughout the year. As soon as the post became permanently vacant, proposals for its filling up were submitted to Government, but so far no officer has been appointed. A Herbarium without a Curator is like a set of tools without a workman to use them, and it is not surprising that botanical work in the Herbarium has been more or less at a standstill. During the year, however, over 12,000 specimens were added to the Herbarium, comprising amongst others about 1,500 collected by the Calcutta and Lloyd Botanic Garden collectors in Bengal, Assam, Burma and Sikkim; about 600 specimens from the Coimbatore district presented by Mr. C. E. C. Fischer, Deputy Conservator of Forests; over 2,000 from the Bureau of Science of the Philippine Islands; over 2,000 European plants from Mr. A. Meebold of Heidenheim, Germany; over 800 from the University of Pennsylvania, U. S. A.; over 300 from Mr. J. C. White, C. I. E., of Gangtok, Sikhim; over 200 Indian plants from Mr. A. R. Tucker of the Imperial Revenue and Agricultural Department, and a valuable collection of N.-W. Frontier plants from Mr. James Marten of the Survey Department. The number of specimens distributed is only about 1,000, as owing to there being no Curator, this work has had to remain in abeyance.

Although botanical work in the Herbarium itself has been an impossibility, the collections have not lain entirely useless, for certain orders and genera of plants have been freely loaned for research work outside India to botanical institutions like those of Berlin and Buitenzorg.

4. *Laboratory and Museum.*—These still await the officer who will put them to use, and there is nothing to add to or qualify the last two annual reports regarding them.

5. *Library.*—About the usual number of accessions by purchase and exchange was registered. Most of the books apart from periodicals are strong individualists as regards colour and material of binding, but now in binding new and in rebinding old books some uniformity is being introduced

6. *Publications.*—Part II of Volume IX of the Annals of the Garden, entitled *The Orchidaceæ of the North-Western Himalaya*, by Mr. J. F. Duthie, B. A., F. L. S., formerly Director of the Botanical Department of Northern India, was issued after a very long delay in the Press. This monograph gives descriptions of all the orchids known to occur in the Western Himalaya, with plates of all the species not already figured. Volume XI, constituting a huge monograph of the genus *Calamus* of climbing palms by Signor Beccari of Florence, with superb plates, and Part II of Volume VI, being descriptions of Burmese algæ by Messrs. W. and G. S. West, have been in the Press for a long time, but are now practically all in type, so that their early appearance is anticipated.

Of the records of the Botanical Survey of India, No. 3 of Volume IV has been published, being the third and concluding part of Sir J. D. Hooker's *Epitome of the British Indian species of Impatiens*. Number 3 of Volume III of the same publication, embodying descriptions of new species of *Sapindaceæ* by Professor L. Radlkofer of Munich is in the Press and should issue very soon.

The Superintendent has contributed several botanical papers to various unofficial periodicals, and has written a sketch of the herbaceous vegetation of Burma for Sir George Scott's handbook to that country.

7. *Interchange of seeds and plants.*—Over a thousand packets of seeds from all parts of the world were received and 1,680 packets distributed. Over 45,000 plants were distributed and over 2,000 received. The seed-distribution list has of late been considerably increased with corresponding benefit to the Garden in the way of exchange.

8. *Arboriculture.*—In connection with the scheme for the development of arboriculture in Bengal, arrangements have been made for the Curator of the Garden to give practical instruction in the planting and care of trees to District Overseers, Sub-Overseers and Road Sarkars, who are to be sent to Sibpur in batches during August to October for that purpose.

9. *Lloyd Botanic Garden.*—The Curator reports that extensive damage was done to unprotected plants by severe hailstorms on three occasions. Alpine plants are gradually being established on the Indigenous Rockery. The Garden workshops were rebuilt during the year and a new glass propagating house and a seed-room erected in the Nursery. A second cloak-room and a 'shelter' were also built, and the boundary fencing was extended along the north of the Garden to prevent irregular entrance on that side. So far as labour was available, the gradients and alignments of some of the paths and the slope of some of the rougher banks were improved. The statistics supplied by the Curator show that the work of this Garden has increased markedly during the last few years.

10. *Financial.*—The allotments for contingencies for the Royal Botanic Garden, Calcutta, and the Lloyd Botanic Garden, Darjeeling, and the travelling allowance of the former were spent in full. There was a saving of Rs. 68-8 on the travelling allowance of the Lloyd Botanic Garden. In the Royal Botanic Garden account, owing to the Herbarium Curatorship being vacant throughout the year, the readjustment of the Superintendent's pay, the deputation of the Assistant Curator of the Garden and other minor causes, there was a saving of Rs. 11,556-13-10 under salaries. The revenue from the Royal Botanic Garden was Rs. 457-1, paid into the Calcutta Treasury. Owing to the fact that the Lloyd Botanic Garden has ceased to compete with the private nursery enterprise that has recently developed in Darjeeling, that Garden's revenue has dropped to almost nil. The total for the year was Rs. 19-2, paid into the Darjeeling Treasury.

General Summary.—Light rain fell generally in the Province except in South Bihar. The rainfall was moderate in Burdwan, Midnapore, Jessore, Khulna, Purnea, and Cooch Behar. More rain is wanted in parts of Bankura, Hooghly, the 24-Parganas, Nadia, Champaran and Bhagalpur. Sowings of the next season's crops are in progress. In Darbhanga the number of persons on gratuitous relief is 11,593, on test-works 2,415, and on famine-relief works 23,461. Cattle-disease is reported from nine districts. Fodder and water are generally sufficient. The price of common rice has risen in ten and fallen in three districts.

SUMMARY OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL AND IN EASTERN BENGAL AND ASSAM FOR THE MONTH OF APRIL 1907.

THE weather during the preceding month was dominated by depressions of the winter type entering India from the west, and at the end of the month the two Provinces experienced some rain under the influence of the last stages of one of these disturbances. At the beginning of the present month an important change commenced in the weather conditions prevailing in the two Provinces. Temperature, which had been low for some time, commenced to rise and became nearly normal, while the pressure distribution commenced to change from the winter to the summer type, an area of low pressure establishing itself in North-West India. No rain fell till the 4th of the month, when thunderstorms gave a few light falls in Eastern Bengal and Assam. During the next week a trough of low pressure extending from the Punjab to Orissa was a marked feature of the pressure distribution. It determined southerly winds at the head of the bay, which gave rise to daily rainfall in Eastern Bengal and Assam. Skies were moderately to densely clouded throughout the week, while temperature was cooler than usual, particularly in the southern districts. From the 11th to the 13th rain fell every day of the week, chiefly in Assam, and was most general on the 13th and 14th. A low-pressure area, which formed over Baluchistan and Sind and extended eastwards into the Central Provinces, gave rise to light precipitation in Orissa, Chota Nagpur and Bihar. It disappeared by the 18th. During the next week the winds appear to have been deflected more to the east than usual with the consequence that rainfall was confined chiefly to Assam. Skies were cloudy in the area of rainfall, but were nearly clear elsewhere. Temperature was in defect during the first part of the week, but at the close was normal or in slight to moderate excess. During the last week of the month scattered rain fell from the 26th to the 28th, increased on the 29th and became general on the 30th. Skies were clear or lightly clouded in the western districts and heavily clouded elsewhere. Temperature was slightly above normal at the commencement of the week; but owing to the extension eastwards of low-temperature conditions prevailing in the Central and United Provinces, temperature fell below normal, and very low values were recorded in Chota Nagpur and Orissa on the 28th and 29th.

Summary of temperature.—Mean temperature was in defect over the whole of the reporting area, the average mean temperature of the month in Chota Nagpur being 5½° below the normal mean of the month. The highest temperature recorded was 105°·6, and this was reported from Bankura. The lowest was 58°·4 reported from Dinajpur.

The following table gives the summary of the temperature of each of the seven meteorological divisions of the Provinces of Bengal and of Eastern Bengal and Assam for the month of April 1907 :—

Summary of Rainfall.—The rainfall work of the Province has been placed in the hands of the Director of Agriculture, Bengal, and the usual data regarding the actual and normal rainfall during the month are published by that Officer. A short table, however, is attached to this report, giving the rainfall recorded during the month at the head-quarters of the various districts of the Province.

The mean pressure, temperature, etc., are deduced from the traces of the Kundson's Barograph from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All thermometers are verified, and the readings have been corrected to a standard constructed and verified at Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 85, formerly at Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any d for 24 hours preceding 8 A.M. of that day.

The mean pressure, temperature, etc., are ded from the traces of the Kundsen's Barograph from eye observations.

The maximum and minimum temperatures are ed from self-registering thermometers. All thermometers are verified, and the readings have bee ected to a standard constructed and verified Kew Observatory. They are exposed under a thatche open at the sides, and are suspended four above the ground.

The barometer readings are corrected to those standard, Newman's No. 86, formerly Surveyor-General's Office.

The hygrometric elements are obtained from Tabl IV, and V of the official tables compute the Meteorological Office and based on Regnault's mo ons of August's formula.

The directions and the movement of the wind are from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot abo ground. The rainfall reported on any d for 24 hours preceding 8 A.M. of that day.

The mean pressure, temperature, etc., are deduced from the traces of the Kundsen's Barograph and from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the New Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; g, dark gloomy; t, thunder; ≤, lightning; R, thunderstorm; ⚡, strong wind; d, drizzling rain; p, passing temporary showers.

RESOLUTION—No. 1028T.—G.

READ—

The Resolution of this Government, No. 1, dated the 1st January 1901, and the papers referred to in the preamble to that Resolution.

Letter from the Government of India, Home Department, No. 468, dated the 6th November 1901, regarding the proceedings of the Educational Conference held at Simla in September 1901.

The Resolution of the Government of India, Home Department, Nos. 199—211, dated the 11th March 1904.

The Resolution of this Government, No. 658, dated the 7th February 1905.

The Report of the Committee appointed by this Government to consider the replies received from Associations and persons consulted in regard to the Resolution last referred to.

The proceedings of the Committee appointed by this Government to consider the question of the revision of the syllabuses for rural schools.

Letter from the Director of Public Instruction, Bengal, No. 86T., dated the 14th May 1906.

Letter from the Director of Public Instruction, Bengal, No. 3981, dated the 2nd March 1907.

1. The question of a curriculum of studies suited to the needs and capacities of the children of agriculturists has for a considerable time been

exercising the attention of both the Imperial and Local Governments. The Educational Conference held at Simla in September 1901 recommended the adoption of a simple and practical course of education for the children of the agricultural population whose studies would not proceed beyond the primary stage; and the Government of India in their letter No 468, dated the 6th November 1901, expressed it as their opinion that in all Provinces arrangements should be made to establish shorter and simpler courses for the children of agriculturists than are required for those who intend to use the primary stages of education as a preliminary only. The question of remodelling the lines on which vernacular education should be conducted engaged the attention of this Government during the years 1899 to 1901. The chief problem to be solved concerned the requirements of the agricultural population, but it was recognised that the educational question to be answered was not merely how to adapt education to the needs of the children of agriculturists, but how to fashion a scheme of education which would promote in the pupils the power of assimilating easily technical instruction of any kind. The result of these deliberations was the publication of Resolution No. 1, dated the 1st January 1901, which promulgated the syllabus of studies for Standards I to VI, which is still in force. It was stated that the syllabus referred to was based on the methods originally put forward by Froebel and generally known under the name of Kindergarten training, and that that system had been adapted to the circumstances and local conditions of the pupils of this Province. A separate syllabus was not prescribed for the children of agriculturists; but in the writing course forms of simple documents commonly used by cultivators were introduced as exercises.

2. The Government of India reverted to the subject of education in rural primary schools in their Resolution of the 11th March 1904, which reviewed the history and progress of education in India. They stated, in paragraph 21 of the Resolution, that the instruction of the masses in such subjects as would best fit them for their position in life involved some differentiation in the courses for rural schools, especially in connexion with the attempts which were being made to connect primary teaching with familiar objects. They further laid down that the aim of rural schools should be, not to impart definite agricultural teaching, but to give to the children a preliminary training which would make them intelligent cultivators, would train them to be observers, thinkers and experimenters in however humble a manner, and would protect them in their business transactions with the landlords to whom they pay rent and the grain-dealers to whom they dispose of their crops.

3. These remarks of the Government of India led the Lieutenant-Governor to refer the whole question of the education of children of agriculturists to a Committee of Government officers. This Committee found that the principal points in respect of which the rural schools of the Province were deficient were—

(*a*) that the courses of instruction were too long, too advanced and too diversified; and

(*b*) that the text-books prescribed were not written in simple language which the rural population could understand.

The Committee were of opinion that in purely agricultural tracts the existing lower primary schools should be converted into schools intended primarily for the sons of agriculturists with short courses of instruction specially suited to the needs of that class. It was not proposed that any change should be made in the instruction given in the lower classes of upper primary, middle and high schools or in lower primary schools in towns or in villages in which agriculturists did not predominate. The Committee recommended that the rural primary schools which they proposed to create should teach a course extending over four years and contain an infant class for children under seven years of age and three classes above it. The number of hours of instruction was to be reduced, but was not to be less than three. The Committee further suggested the lines on which the curriculum for the four classes proposed might proceed, and recommended that a Committee of

duly qualified officers should be formed to prepare model text-books. It was proposed that the text-books should in the first place be prepared in English, and that, when Government had approved them, they should be translated into the local vernaculars.

4. These proposals were summarised in Resolution No. 658, dated the 7th February 1905, which was published for general information. Public criticism was invited and various official and non-official gentlemen and associations were consulted. All the material collected was then discussed by a Committee of officials and others interested in education. This Committee did not altogether agree with the proposals made by the previous Committee. What they proposed was that the lower primary course, slightly modified, should be divided into two sections—the one to consist mainly of the "three R's" and the teaching of simple facts relating to agriculture and village life, and the other to be directed to the study of such additional matters as the training of the senses, drawing, drill and manual exercises. The first section, it was proposed, should be so arranged as to provide for imparting the rudiments of sound education to all, including the children of agriculturists, while the other would be taken up by those who aspired to a higher education. The second section was in fact to be supplementary of the first and was intended to bring the curriculum of a rural school taking both sections up to the standard of an urban primary school. The subjects of the first section were to be taught in the morning, and those of the second or supplementary section in the evening, or *vice versâ*, as circumstances might dictate. No change was proposed in regard to the existing course of studies in the lower classes of upper primary, middle and high schools or in lower primary schools in urban areas. As to the preparation of text-books, this Committee rejected the proposal of the former Committee that the books should first be prepared in English and then translated into the vernaculars, and recommended that representative Committees should be appointed to prepare text-books in the vernaculars according to a syllabus, which was to be worked out by a Committee with wider educational experience. A Special Committee was accordingly appointed to draw up the syllabus of studies for rural primary schools.

5. This Special Committee, which consisted entirely of persons actually engaged in work connected with education, found themselves called upon to prepare a detailed syllabus on lines which did not appear to them to be altogether sound. They could not, for example, admit that a scheme of instruction, which was intended for the children of agriculturists, but which relegated the training of the senses to a supplementary curriculum from which such children would be for the most part excluded, could be regarded as anything but retrograde. They were also strongly of opinion that the defects referred to at the beginning of paragraph 3 above, which had been found in the courses of instruction followed at, and in the text-books used in, rural schools, existed equally in the case of urban schools. In short, the Committee felt strongly that the existing curriculum for the lower primary standards was not satisfactory for schools of any class. It seemed to them moreover that if a syllabus could be formulated which realised the principles on which the curriculum published with Resolution No. 1, dated the 1st January 1901, was based, such a syllabus would be in its essentials equally adapted to urban and rural areas. Keeping in mind the maxim of the Government of India that the aim of rural schools should be not to impart definite agricultural teaching, but to give to the children a preliminary training which would make them intelligent cultivators, and would train them to be observers, thinkers and experimenters in however humble a manner, they did not see how it could even be hoped that this would be obtained as the result of a syllabus which confined itself mainly to the "three R's." Nor could they admit that a syllabus in which "nature study," by which is meant the actual study of natural objects, did not find a prominent place, could be regarded as a serious attempt to realise the aim of rural schools as the Government of India had defined it. In the opinion of the Committee the syllabus of 1901 had failed, because it had allowed reading about objects to be substituted for the study of the objects themselves, and had ignored the fact that the faculty of observation is not developed by reading scientific treatises. It

seemed to the Committee that the cultivation of the power of intelligent and accurate observation was, if possible, more important in the case of the cultivating classes than in that of any other section of the community; and it appeared to them that the teaching of simple facts connected with agriculture could not be considered as of much educational value, unless it was based on an attempt to teach the children to observe, compare and contrast the objects which surround them. The principles which underlie the development of a child's faculties are the same in the country as in the town: it is the application of these principles which varies with the environment.

6. As a result of these considerations the Special Committee drew up a syllabus of studies for infant classes and Standards I and II, designed to embody educational principles applicable to both rural and urban schools, and to indicate the methods by which those principles can be carried into effect. As a prelude to the syllabus an introduction is given, which is intended to illustrate the function which a school has to perform in relation to the larger life of the community in general and to emphasise the ethical aspect of all true education. Science primers have been abolished, and the basic principle of all nature study, viz., that children must be taken to the objects of nature and made to learn therefrom, has been insisted upon. The value to the future cultivator of studying plant life on these lines has been emphasised, and an extract from a Note on School Gardens recorded by Mr. F. G. Sly, when officiating as Inspector-General of Agriculture in India, has been appended to the syllabus in order to emphasise the conditions under which alone a school garden can be made of true educational value. Finally, provision has been made for the teaching of supplementary subjects. The syllabus thus drawn up was submitted for opinion to the gentlemen who constituted the Committee referred to at the beginning of paragraph 4 above. The opinions which these gentlemen recorded, which were generally favourable, were considered by the Special Committee, with the result that a few minor alterations have since been made in the syllabus.

7. The Lieutenant-Governor has considered very carefully the views expressed by the Special Committee and has decided to adopt the syllabuses which they have prepared, viz:—

(*a*) The syllabus of studies for the infant section and Standards I and II of boys' schools; and

(*b*) the syllabus of studies for the infant section and Standards I and II of girls' schools.

The revised syllabuses will apply equally to urban and rural areas, but the supplementary subjects provided for in the syllabus for boys' schools will be optional in rural and compulsory in urban areas. The syllabus of studies for girls' schools differs slightly from that prescribed for boys' schools: a different course has been laid down for hygiene and domestic economy, and needlework has been included. In the case of all girls' schools the subjects which are supplementary in the syllabus for boys' schools form part of the obligatory course. The hours of instruction in rural areas must be left to be fixed locally; but the daily number of hours of instruction will not be less than three. The further question of the revision of the course of studies and text-books for Standards III to VI on similar lines has, under the orders of the Lieutenant-Governor, been considered by the Special Committee, and the proposals made by that Committee will shortly be submitted to Government.

8. The revised syllabus for lower primary schools will necessitate the preparation of revised text-books. The Committee referred to in the beginning of paragraph 4 above recommended, as already stated, that representative Committees should be appointed to prepare text-books in the vernaculars, and that the system hitherto followed of preparing the books first in English and then of translating them should be abandoned. The Special Committee, which was appointed to draw up the syllabus, advised, however, on several important grounds, that this procedure was feasible only in regard to literary readers, and that other books should be written in one language and then translated

into the vernaculars, the translator being allowed scope sufficient to enable him to express himself in his own way in as simple language as possible. The Lieutenant-Governor has accepted this recommendation. Committees will shortly be formed to prepare the text-books noted in the margin. The Junior Teachers' Manual will be divided into eight sections, each of which will be written by a separate committee. When complete, the manual will be translated into the various vernacular languages. The sections into which the Manual will be divided will be (1) the Kindergarten method of teaching, drawing and modelling; (2) the school-room and the arrangement of children; (3) hygiene; (4) the teaching of geography; (5) scientific subjects, including nature study; (6) the method of writing up attendance registers, keeping school accounts and issuing transfer certificates; (7) education in *maktabs*; and (8) the teaching of arithmetic. The members of these committees will be remunerated by the grant of honoraria for their work, and the results of their labour will become the property of Government. It is, however, to be clearly understood that the preparation of text-books at Government expense is not intended to discourage private enterprise. Any works submitted by private authors will be considered on their merits and accepted, provided that they fulfil the required conditions. The model text-books which will be prepared at the cost of Government will be open to inspection, so that private authors may have a chance of examining them before they begin to write their books. The latter books will not be received for consideration until the former have been published.

(1) Literary readers for the second year of the infant section and for Standards I and II in the vernaculars.
(2) An Arithmetic book for Standards I and II.
(3) A Junior Teachers' Manual.

9. It now remains to consider the date from which the new syllabuses will be brought into operation. It is expected that the model text-books will be ready by June 1908, and private authors will be given one year's time to prepare their books. It has been decided that the last lower primary examination to be held according to the existing syllabus will be held at the end of 1910, and that children beginning their studies in 1910 for the lower primary examination to be held at the end of 1911 will study during 1910 according to the revised syllabuses. No further lists of approved books for the infant section and Standards I and II will be issued until books written in accordance with the new syllabuses are ready. The first list of approved books written according to the new system will be issued in July 1909. The use of books written in accordance with the syllabus now in force will not be permitted after the 1st January 1911 in any schools maintained or aided by public funds or in schools which enjoy the privilege of competing for Government scholarships or of receiving Government scholarship-holders, unless they have been approved by Government as meeting the requirements of the revised syllabuses. Books prepared in accordance with the revised syllabuses will be prescribed for the lower primary examination to be held at the end of 1911.

10. The following books will be required according to the new syllabuses:—

(1) A literary reader for the second year infant class, to contain about 32 pages. If suitable selections from standard writers cannot be procured, original composition may be resorted to. The reader should contain some illustrations, and it should be suitable both for Hindu and Muhammadan children. *Price one anna.*

(2) A literary reader for Standard I, to contain about 48 pages. Selections should be made from standard authors. The reader should contain some illustrations, and it should be suitable both for Hindu and Muhammadan children. *Price one anna six pies.*

(3) A literary reader for Standard II, to contain about 64 pages. Selections should be made from standard authors. The reader should contain some illustrations, and it should be suitable both for Hindu and Muhammadan children. *Price one anna six pies.*

(4) An arithmetic book in two parts for Standards I and II. *Price three annas.*

The use of an alphabet book will not be made obligatory in any school; but, if any books of this class are tendered, they will be considered on their merits. The price of such books should not exceed one anna.

11. A drill book will not be required, because a book of this kind has already been prescribed by Government and is available in English and the vernaculars. No drawing book will be required.

12. Reference has been made, in paragraph 7 above, to the revision o the courses of studies and text-books for Standards III to VI. It is impossible to say at present when the revised syllabuses will be approved. It must be understood, however, that, though Government will for the present continue to consider books submitted in accordance with the present syllabuses for these standards, the approval of any such books in the future will not operate so as to bind Government to keep them on the approved list for any specified period, the intention of Government being to introduce the revised syllabuses as soon as practicable.

ORDER.—Ordered that this Resolution and the revised syllabuses for boys and girls' schools be published for general information.

By order of the Lieutenant-Governor of Bengal,

H. C. STREATFEILD,

Offg. Secy. to the Govt. of Bengal.

Syllabus of Studies for the Infant Section and Standards I and II of Boys' Schools.

INTRODUCTION.

THE purpose of a school is to form and strengthen the character and to develop the intelligence of the children entrusted to it, and to make the best use of the school years available in assisting them to fit themselves for the work of life.

The formation of character must always be one of the main aims of education, and every part of school-life has some influence in this regard, whether for good or evil. It must, for example, be our constant endeavour to adapt the teaching of a school to the attainments of its pupils, and this not merely to secure due intellectual progress, but because children will acquire the bad habit of idleness both when the work demanded of them is too easy, and also when it is too hard. Moreover, the good moral training which a school should give cannot be left to chance; on this side no less than on the intellectual side the purpose of the teacher must be clearly conceived and intelligently carried out.

Something may be done through the expression and reading lessons. In these the children may be taken through the biographies of typical heroes or heroines, and these biographies should be treated in the main with a view to illustrating the action of real persons and the principles of conduct and qualities of character which promote the welfare of the individual and society.

The lives of great men and women, carefully selected from all stations in life, will furnish the most impressive examples of obedience, loyalty, courage, strenuous effort, serviceableness—indeed of all the qualities which make for good citizenship. The teacher should place in relief those actions of his heroes or heroines which exhibit their higher qualities, but should take care not to raise them too far above the level of common humanity by the omission of their faults or shortcomings. He should make the picture a life-like and instructive exhibition of character, and of the effect on the individual and on those around him, for good or evil, of the acts recorded.

A similar appeal can be made to the imagination of children by the use of music in well-chosen songs or of appropriate passages from the best literature of their mother-tongue.

Above all school-life must prevent children from forming bad habits, and this it can only do by training them in good habits and, if possible, in good conduct, by which is meant something wider than the mere cheerful observance of school regulations. In the matter of this moral training the most important factor will be the habitual conduct of the teacher in the school. If he is thorough, patient, kind but firm, and scrupulously fair, these traits will evoke similar traits in his pupils, and will give point and force to any moral instruction he may attempt. A teacher who is obviously slipshod and lazy discoursing to children about the value of industry and thoroughness is an absurdity which cannot but prove morally disintegrating to a child. Stories in readers designed to inculcate morals tend, if silly, as they frequently are, to make moral instruction ridiculous. Even if they are good they are of little value unless they are backed by personal example.

The every-day incidents of school-life will enable the teachers to impress upon the children the importance of punctuality, of good manners, of cleanliness and neatness, of cheerful obedience to duty, of consideration and respect for others, and of honour and truthfulness in word and act. Children will notice such details in the conduct of a teacher as punctuality, order, neatness and gentleness, and they will imitate what they see and hear. They are quick to observe; and if the teacher's conduct is in these respects defective, his example must almost certainly have a disastrous effect on the habits of the pupils. Thus the punctual and methodical performances of duties, even in matters of trivial routine, will impress upon the children better than any lesson the importance of orderliness, and the good habits of the teacher will be even more powerful than his express requirements in shaping his pupils for the proper conduct of life.

Syllabus of Studies for the Infant Section and Standards I and II of Boys' Schools.

INFANT CLASS.

FIRST YEAR.

Ages 5—7.

THE principal aim of any school in relation to infants should be to provide opportunities for the free development of their bodies and minds, and for the formation of habits of obedience and attention. The infants of the first-year class should be confined to the simplest lessons designed to develop in them the power to express their thoughts and feelings and to observe with some degree of accuracy. They should also be initiated into a rudimentary conception of colour, form and number, and should be taught to exercise their limbs and to sing simple songs.

Observation and Expression.—The lessons designed to develop the power of expression will generally, owing to a lack of staff, have to be combined with *those designed* to develop *the power of accurate observation.* These lessons should usually take the form of talks between the teacher and the children about familiar things. The subjects will vary with the surroundings and condition of the school; the essential point is that the themes selected should be well within the range of the children's comprehension and interest. Occasionally the children themselves should be asked to suggest a topic. When the chief aim of the lesson is the *development of the power of expression*, the subject may be a story of folklore, mythology or adventure, or even the outline biography of a striking character: when the chief aim is *the development of observation* the subject of the lesson should always be some concrete object. This object should always be placed before the children, and they should be given every opportunity of examining it. In these lessons the teacher should address himself to the children individually rather than to the class collectively, and his object should always be to make the children do most of the talking. Indeed throughout these lessons it is essential that the children should be trained and encouraged to talk individually. Collective answering or collective repetition of the words of the teacher by the class should never be allowed. These practices not only render these exercises valueless, but they are an actual hindrance to the development of genuine thought and free expression. Some children are shy, and therefore their natural curiosity, which should result in eager questioning, is repressed. These lessons, if properly conducted, will do much to remove this shyness, and to make children accustomed to speak out in class. It is undesirable to fetter or repress a child's liberty of speech more than is actually necessary. Unnecessary repression makes a child less communicative and less able to express his own thoughts, consequently less capable of clear thinking.

When an observation lesson is given on a natural object, such an object should always be treated as a living whole and in relation to its life. Even in the earliest lessons, the fact that each part of an animal or plant is what it is as contributing a necessary element to the life of the animal or plant should always be kept in view. Thus from the first the teacher should by questioning lead

his pupils to analyse the several impressions which go to make up their total impression of the object, and then bring out the relation of each to the whole. After this process of analysis the separate aspects should be reconstructed to restore the unity of the impression of the object as a whole. Great stress should not be laid on the utility to man of the natural object which is being studied.

First year.—The observation lessons of the first year of the infant class should deal with such flowers, fruits, plants, beasts, birds, insects and fish of the district as are likely to have impressed themselves most vividly on the imagination of the children. These objects will vary in the different districts, and as regards plant-life, it is essential that each object should be taken in its season: a lesson on the cotton tree flower should, for example, be given while the cotton trees are in bloom. The same principle will apply to fish and in a minor degree to other animals. The following are given merely as illustrating the kind of objects which may be selected for these lessons:—

Flowers.—Cotton tree flower, jessamine, gold mohur, champak, convolvulus, bel flower, or any other type commonly found in the locality.

Fruits.—Papaya, pomelo, litchi, mango, plums, custard apple, plantain, pineapple, jack fruit, or any other type commonly found in the locality.

Plants.—Rice, Indian-corn, cotton, mustard, pulses, jute, or any other type commonly found in the locality.

Animals.—Domestic animals; cow, goat, cat, dog, etc.; Wild animals—tiger, monkey, elephant, or any other type commonly found in the locality.

Birds.—Crow, blue jay, maina, golden oriel, kingfisher, parrot, babui bird, bák, snipe, duck, pigeon, bulbul, kite, or any other type commonly found in the locality.

Insects.—Mosquito, dragonfly, butterfly, bee, ant, beetle or any other type commonly found in the locality.

Fish.—Hilsa, vetki, topshi, pabda, rohu, mirgel, katla, or any other type commonly found in the locality.

(*a*) *Colour.*—Children should be initiated into the appreciation of colour by being given objects, pieces of wool, flowers, coloured slips of wood or paper which represent the colours red, yellow, green and blue. The children should be made to group these objects under the various colours.

(*b*) *Form.*—The children should be taught to draw on a large scale such natural objects as are simple in shape. This work should be done with chalk on blackboards.

(*c*) *Number.*—Children should be initiated into the idea of number by means of objects, which must be given to the children for them to handle. What the objects are is immaterial, so long as they are small and easily handled, but it is easier to secure a child's active co-operation, if he is not always given the same kind of object. The children should first of all be given a small number of objects, not more than 20, and having learnt numeration so far, they should be made to understand the numbers 1—10, by making sets of each, dividing them into their component parts, etc. Thorough familiarity with these numbers should be aimed at, rather than rapidity of progress. When these numbers have been grasped, the number of objects given to the children may be increased, and the process of grouping and analysis continued. In this way the principles underlying the four simple rules of arithmetic should gradually be elucidated. The infants of the first-year class should be taught the principle of addition by being made to put together sets or groups of numbers which they have made. Thus from the first children can be taught to add rather than to count by units. The infants of this class should also be taught to

construct multiplication tables up to 5 × 10. No table should be taught until it is constructed. Children should be gradually taught to write numbers from 1 to 50 in figures.

Reading and hand-writing.—The children in this class should be taught to recognize the simplest sounds of their vernacular language. This should be done by putting before them not isolated letters, but letters combined into short words. Words of two consonants should first of all be used. The order in which these sounds are taken is important, and experience has shown that it is best to begin by calling attention to the sounds that are produced by the visible organs of speech, *i.e.*, the lips, and to proceed later to those produced by organs only partially visible or wholly invisible. Labial consonant sounds should therefore be taken first, then dental, then cerebral, then palatal, and finally guttural. It should be noticed moreover that such a sound as that of ◌ু (u) can be best observed at the end of a word, where it can be easily isolated and repeated after the word has been pronounced. The teacher should from the first put small words before the children, but until the simple sounds have been mastered he should use each word to illustrate especially one consonant sound. At a very early stage, for example, he would take the word তনু (ময়), but he would partially disregard the ন (ন) sound and make the children dwell on the ◌ু (u) sound in the manner described above. When a short word has been treated in the manner described, the children should be taught to copy it on a large scale either in chalk on blackboards or in trays of sand on which they can make impressions with their finger tips. Towards the end of the year palm-leaves may be used for this purpose. After the letters have been learned in the manner prescribed, the alphabet should be taught. An alphabet book may be used, but it is not to be considered in any way compulsory.

Nursery rhymes, action songs, free physical exercises.—The children should be taught to sing nursery rhymes and simple household songs. They should also, if possible, be taught action songs, dealing with the every-day activities of village life. These action songs should be connected with games, for in this way the limbs and lungs of the children can be freely exercised at the same time. Children should also be encouraged to play such games as *hide-and-seek*, etc. In the absence of action song games, these should form the principal medium of physical exercise. The youngest infants should not be made to do set drill.

INFANT CLASS.

SECOND YEAR.

Ages 6—8.

Observation and Expression.—The lessons designed to develop the power of expression should now aim definitely at training the children to reproduce their thoughts in logical sequence. The topics of the lessons may therefore be gradually expanded into greater detail, and the conversational form of the lesson gradually give way to a system of more continuous narration on the part of the teacher. Thus towards the middle of the year the class should be able to follow a simple story as it is narrated to them by the teacher. After the story has been told individual children should be asked to reproduce the gist of it in their own words. In the transition from conversation to continuous narration great care should be taken to ensure that the children are actively following the story. If the teacher finds that individual children are not able to reproduce the gist of the story in their own words, he may assume that they have not been actively following him and have recourse again to the more conversational method. Similarly the scope of the lessons designed to develop the power of accurate observation may be extended, and should aim at giving the children definite information about some of the most familiar natural objects with which they are daily surrounded. It must be remembered however that these lessons will fail of their main object if the information is simply told to the children without their being made to discover it for themselves. The course of lessons must be systematic, one lesson leading up to the next, and the later lessons constantly requiring some of the earlier lessons for their explanation. The object of each lesson should be the discovery of some new fact, but it is quite useless to give children various items of information about a number of disconnected natural objects. The study of plant life is recommended as capable of being systematically handled easily and economically; and as it is especially adapted to rural schools, it must on no account be neglected in them. The teacher should make an especial study of at least one branch of nature study. Technical terms shall be, as far as possible, avoided. These lessons should not always be given in the school building. The children should be taken out by the teacher and encouraged to collect specimens, etc.

Second year.—In the second year of the infant class the lessons on natural objects should be continued, but some very elementary lessons on the most prominent physical phenomena should be included. The children should, for example, be made to observe the varying position of the sun at the various seasons of the year and how these different positions are accompanied by varying temperatures. It will not be possible in this class to explain many of the phenomena observed; but if the children are made to see for themselves, their observations can be made the basis of further instruction. The children can, for example, be made to see the gathering of the clouds during the rains; and thus though it may not be possible for them at this stage to understand the monsoon, they will in this way acquire material from which observations leading to a proper understanding of the monsoon can start. These lessons should centre round the seasons of the year and should be, as far as possible, brought into line with the lessons on plant-life. Thus a simple lesson on the rains might well lead to a lesson on the crops which ripen at that season, such as early rice or jute.

Object-lessons on common domestic objects may also be given both to the first and to the second year infant classes.

(*a*) *Colour.*—The children should be taught by the method indicated for the children of the first year to recognize orange, indigo and violet, and to distinguish the various colours one from the other.

(*b*) *Form.*—The drawing of natural objects on blackboards should be continued. The children should also be taught to model in clay the natural objects put before them for the observation lessons.

(*c*) *Number.*—The children should be taught by means of concrete objects the principles underlying subtraction and division; they should also be made to construct the multiplication tables up to 10 × 10. They should then be made to work out by means of the objects given to them simple calculations and problems, involving the application of the four simple rules. When the children have learnt to write figures, they should be shown occasionally how to express on paper sums which they have already worked mentally or with the aid of objects. There should be no attempt during this year to make children work calculations on paper. The calculations and problems should therefore be confined to small numbers which do not require the use of pencil and paper.

Reading and Hand-writing.—When the children have mastered the simple sounds and learnt the combination of simple sounds into words, they should be taught to recognize the more complex sounds, such as those represented by compound consonants, and the combination of consonants and vowels other than ৰ (র). These sounds should be taught by means of short words and not by letters taken by themselves. These words may be either written by the teacher on the blackboard or reading charts prepared on these principles may be used. The words put before the children should be copied by them on a large scale in one of the ways indicated in the syllabus of the Infant first-year class. A simple literary reader should be introduced into this class.

Nursery rhymes, action songs and games, physical exercises.—The infants of the second-year class should join with the infants of the first year in their nursery rhymes, action songs and games. Any child who is in the infant class, but is in the opinion of the teacher too old to profit by these childish amusements, should not be compelled to take part in them.

STANDARD I.

Age about 8 years.

Reading.—The main purpose of teaching to read is to enable the pupils to master printed or written matter for their own information. Silent reading should, therefore, be practised from the first, and the teacher will soon get the children into the way of this, if, to begin with, he gives them short pieces to read and after a short time goes round to the children individually and asks for an account in their own words of what has been read. Such pieces should be full of incident and interest. As regards reading aloud, clearness of utterance and fluency should always be kept in view, but it is also essential that the children should be taught to read intelligently. The teacher should make the gist of the piece clear before it is read, so that the general meaning may be mastered before it is read out in class. Without this the reading must be mechanical because it is unintelligent. It is advisable that the teacher should occasionally read out a passage to the class by way of illustration; but in this case also the class should go through the piece beforehand. The reading material put into the hands of the children is of the greatest importance. The Primer should contain nothing which is not written in good language and in words which will not be easily intelligible to all. The arrangement of each piece must be logical, and the language must be good in so far as each sentence must express clearly and straightforwardly the meaning which it is intended to convey. The Primer should contain stories which fall within the range of the children's comprehension and interest; descriptions of the various scenes and episodes of rural life should also be included. Provision should also be made in the Primer for acquainting the children with some of the more impressive stories of English and Indian history. The whole should be written in an easy narrative style. A passage having been prepared beforehand and the difficulties elucidated, the actual reading lesson should be as little as possible interrupted by the teacher, and all long disquisitions on points suggested by the subject-matter should be avoided. At the end of every reading lesson the children should be questioned on the subject-matter individually, and should be trained to give individually and in their own words an account of what has been read.

Arithmetic.—Notation up to 1,000. Tables up to 12×12 and the 16 times tables to be constructed and learnt. Calculations and problems involving the application of the four simple rules, the principles of which will have been learnt in the infant classes. These calculations and problems should be worked both mentally and with the aid of concrete objects. In the latter part of the year work should be done regularly on paper, but the problems and calculations set should not take the children into numbers above 1,000.

Hand-writing and spelling.—The teacher should write two or three words on the black board and the children should copy these on paper. The words copied should always be those which the children have recently seen at their reading lessons. Spelling being almost entirely a matter of the eye, the children should never be made to learn by rote long columns of words, and no spelling should be taught apart from the words contained in the writing and reading lessons. When the first difficulties of hand-writing have been mastered, children should be made to transcribe sentences from passages in the Primer which they have recently gone through in class.

Drawing and Modelling.—The drawing of natural objects with chalk on blackboards should be continued, as also the clay, modelling. This work should be kept in close connection with the nature observation work, the objects selected for drawing or modelling being invariably those with which the children are dealing in their observation lessons. Habits of observation are better cultivated by the thorough examination of a few objects than by a less careful examination of many; therefore it is desirable that the children should be made to model the objects which they have been given to draw, and *vice versâ*.

Composition.—The composition in this class should be entirely oral, and should consist to a considerable extent of the reproduction by individual children in their own words of the subject-matter of the reading lessons. Another method which may with advantage be employed is to give the class a short piece of narrative to read through to themselves, and then to require individual children to give the gist of what has been read. It should be remembered, however, that the teaching of composition does not mean more than the training of children to express what is in their minds. What is taught is not really assimilated until it can be reproduced. Therefore the teaching of composition should form a part of every lesson given in the school. It is advisable to set apart a certain amount of time for these lessons, but the principles which ought to underlie them and the object at which they ought to aim should never be lost sight of in any lesson.

Nature observation lessons—

(*a*) A definite and systematic course of these lessons should be continued on the lines and principles laid down for the second year Infant class. The drawing and modelling work should be supplementary to and illustrative of these lessons.

(*b*) A class calendar should be kept in which the children's observations of all natural phenomena and plant life should be regularly recorded.

1. *Natural Phenomena.*—Continuation of the work begun in the second year of the Infant class. The observation of sunrise, dawn, sunset, day and night, shadow, the varying length of day and night.

2. *Plant life.*—Germination, the growing of beans, peas, mustard on damp flannel, the growth to be observed and sketched at every stage; the observation of the different parts of a plant, root, stem, leaf, blossom, fruit. In these relations such common plants, as the marigold or mustard, or climbing plants, such as peas or convolvulus, should be shown to the class.

In rural schools, lessons on the following should be included:—Cereals, pulses, oilseeds, vegetables, sugar, straw, jute, hemp, bamboos, timber and spices.

Plants should be observed and talked about in relation to their natural surroundings.

Hygiene.—The object of this teaching is to try and impress upon the children some simple rules of health. If this teaching is to be of any value whatever, it must proceed not merely by precept but by example. The first essential then is that the teacher himself should be a man of healthy and clean habits; the second that the school should be well ventilated and scrupulously clean; the teacher should also insist that every child who comes to school must be clean and tidy. The lessons should take the form of talks on the following or similar topics:—

(*a*) The necessity for personal cleanliness.

(*b*) The necessity for keeping rooms clean.

(*c*) The necessity for pure water, fresh air, sunlight and ventilation, the danger of shutting up sleeping-rooms.

(*d*) The danger of insanitary and dirty habits, such as spitting.

(*e*) The necessity of exercise.

SUPPLEMENTARY SUBJECTS FOR STANDARD I.

(*a*) *Elementary Drill.*—Simple exercises. Special attention should be paid to exercises designed to counteract the effect of bad habits which may be contracted at school, such as sitting with the shoulders rounded and the chest contracted, etc.

(*b*) *Hand and eye training, including drawing*—

(1) Drawing in pencil natural objects, the drawing of which in chalk has formed part of the compulsory curriculum.

(2) Modelling in clay natural forms, such as fruit and leaves.

In addition to the above, *mat-work*, *basket-weaving* or *paper-folding* may be introduced, if considered desirable.

(*c*) *Arithmetic*—

More advanced work on the lines of the compulsory course.

(*d*) *Nature Observation Lessons—Animal life.*

See instructions (*a*) given under the head of "*Nature observation lessons.*"

A class calendar should be kept in which the children's observations of animal life should be regularly recorded.

Continuation of the lessons on the same lines as those prescribed for the second year of the Infant class, the treatment of the subject being slightly more advanced; the distinction between herbivorous and carnivorous animals.

Animals should be observed and talked about in relation to their natural surroundings.

STANDARD II.

Age about 9 years.

Reading.—The reading lessons should be continued on the lines laid down for Standard I. The stories contained in the Primer for this class should be written in the same easy narrative style as that prescribed for Standard I, and equally in this as in the lower class should the language used be such as is generally intelligible to all. The stories should be slightly more detailed and complex than those written for Standard I. In the case of rural schools the Primer should also contain short and simple descriptions of the chief crops, fruits, etc., of the district, the conditions under which they thrive, their value, use, etc. These lessons should be closely connected with the nature observation lessons, the observation lesson on a mango, for example, being followed by a reading lesson on the same subject. Stories of the more important events of Indian and English history should be included in the Primer.

Arithmetic.—Notation above 1,000. The children should continue to work mentally with the aid of concrete objects, and on paper, problems and calculations involving the application of the four simple rules. They should also be taught the value of the various coins of the currency, and the weights and measures which are in use in villages. These should not be taught merely by rote. The children should be supplied with token coins, and they should be taught to work out reductions, etc., with these coins, before abstract reductions are attempted. When the children are able to make reductions in the concrete, sums which they have worked in this way may be expressed on the blackboard or on paper, and an easy transition thus made to abstract work. Similarly, with weights, an ordinary pair of scales (*tol duri*) should, where possible, be provided and the children not only shown their use, but made to work out for themselves at the scales reductions from seers to chitaks, etc. Similarly with land measurements, the children should be taken out of the school building and made to measure out for themselves bighas, cottahs and chitaks. The school building should be measured by the children under the guidance of the teacher, and the measurements recorded. Having thus mastered the meaning of weights and measures, they can, if their capacity and time permit, be made to work out abstract calculations. As regards land measure, the essential thing is that they should be able to measure land for themselves.

As regards "*Subhankari*," while it is recognized that various tables must be learnt by heart, their practical application should be insisted upon and the arithmetical principles underlying them should be explained.

The course to be followed will include the following:—Notation and numeration of *karâ*, *ganda*, *buri*, *pan*, *chouk*, *kâthâ* and *seer* up to 100. Tables of money, weights, and measures in common use, and simple problems thereon. *Sayisi*, *deriyâ*, *arâyia*.

Hand-writing and Spelling.—The children should be taught to write by being made to copy words and sentences written by the teacher on the blackboard. They should also be made to transcribe passages which they have recently read

in the Primer. Passages from the Primer should also be written out by the children at the dictation of the teacher, this exercise being varied by the occasional repetition to the children or the reproduction in the teacher's words of a story either told or read to them for the purpose of a composition exercise. When the children have acquired some facility in writing, the teacher should show to the class various specimens of handwriting and draw attention to their peculiarities. If the teacher can in this way get the children over the initial difficulty of reading handwriting, he should occasionally give them letters, and in the case of rural primary schools easy specimens of *kabuliyats*, *jamabandis*, *khasras*, *pattas*, rent receipts, etc., to puzzle out in class and then read out individually. The difficulty involved in reading these documents can only be surmounted by practice and individual effort. A number of different *manuscripts* should therefore be distributed among the class, each child being given a different one. In connection with the handwriting work the rudiments of postal information should be imparted (*vide* Circular No. 85 of the Director of Public Instruction, Bengal, dated the 16th June 1905).

Drawing and Modelling.—The drawing on blackboards and clay modelling should be continued on the lines laid down for Standard I, it being always kept in mind that this work is to be treated as supplementary to, and illustrative of, the nature observation work.

Nature Observation Work—

(*a*) A systematic course of lessons on the lines prescribed for the lower classes should be continued, care being taken that these lessons supplemented and illustrated by the drawing and modelling work should lead up to the descriptive reading lessons about crops, etc., mentioned in the reading syllabus for this standard. Thus—to take an example of a natural object, which enters very largely into the children's lives, a mango,—by an observation lesson on a mango the several impressions which go to make up a child's total impression of the object should be analysed and the relation of each to the whole brought out. By being made to model it in clay he learns really to know its shape, in his reading lesson he learns something about the conditions under which it grows, its uses and value, and, finally, the mango can be made a subject of composition, either oral or written. If written, the composition should be illustrated and the faculty for memory drawing thus brought into play.

(*b*) A class calendar should be kept in which the children's observations of all natural phenomena and plant life should be regularly recorded.

1. *Natural Phenomena.*—The observation of such phenomena as air, wind, evaporation, rain, the rainbow, dew, the action of water on land, etc.

2. *Plant life.*—Continuation of the work prescribed for Standard I. Observation of roots, stems and leaves with a view to their simple classification.

Plants should be observed and talked about in relation to their natural surroundings.

Composition.—The teaching of composition should be continued on the same lines and principles as are laid down for Standard I. The children should also occasionally be made to reproduce in writing what they have read or heard. As regards this, however, it must be remembered that the difficulties inseparable from writing hamper a child's freedom of expression,

and that while it is important that these difficulties should be removed, it is essential that they should not be allowed to check a child's natural expansiveness, which should by this time have been developed into a certain power of expression. The easiest method of transition from oral to written composition is for the teacher to write on the blackboard at the children's dictation. This will enable him to explain the division of a passage into sentences. When the passage is written on the blackboard, the children should be made to transcribe it. Written composition however should be only an occasional exercise; oral composition must never be discontinued. Again while neatness should be insisted on, children should not be allowed to stop and rule lines, etc. Such practices are not only a waste of time, but they divert a child's attention and so hamper his power of expression. At these lessons excessive attention should not be paid to the formation of letters, etc.; for this also tends to diversion. The main object of these lessons is not the formation of hand-writing, but the development of the power of expression.

Poetry.—The Primer should contain pieces of simple but good poetry, and these should be learnt by heart by the children. Extreme care should be taken that no piece is included in the Primer which has not at least a strong claim to be considered poetry. It has been said "that learning by heart is valueless, unless in the process the memory is enriched with a store of beautiful thoughts, expressed in beautiful language, which will serve as a touchstone to the scholar's own method of expression and be a constant source of pleasure to him." When a piece of poetry has been selected for the class to learn by heart, it should always first of all be read aloud by the children individually. It should moreover always be learnt individually and never dictated to the class and then repeated in unison. Such a device is the merest mechanical drill and destroys any value recitation may have. It is not in the least necessary that all the children in the class should learn the same passages or the same amount of poetry. Capacities vary, and few, if any, poems make the same appeal to all children. It is desirable therefore that, as far as circumstances permit, the poetry taught to each child should be adapted to his capacities and tastes.

Geography.—The aim of teaching geography in these schools is to enable the children to observe for themselves the chief physical features of their actual surroundings. It will probably not be possible to take the children very far in this direction; something, however, will have been gained, if the children can be trained to an accurate apprehension of the spatial relation of the various divisions of their neighbourhood. It should be remembered that geography ought not to be regarded as an isolated part of the curriculum. It is impossible, for example, to give rational teaching about natural products without treating of the kind of places in which, for example, a particular plant, etc., grows. The children will, for instance, be told that rice will not grow in a place where there is not plenty of water attainable. From this fact the teacher would naturally pass to the reason why water lies in certain parts of the village and not in others. If he is giving an observation lesson it is not advisable for him to embark widely on side issues. The correct method is that one part of the curriculum should supplement the other. The aim of the school being to

train children to observe intelligently what they see daily around them, the teacher cannot neglect altogether the most important physical features of the locality. A rational study of these, combined with instruction designed to make the children appreciate to some extent dimension and spatial relation, can be made up into a system of geographical teaching, which, though limited, is both educationally sound and capable of almost infinite development. As a method of teaching dimension and spatial relation, it is suggested that the children should first of all be taught to notice the variation in the shadow of the sun cast by the school building at different times of the day. In this way they will learn by actual observation the cardinal points, and will thus get a fixed standard by which to arrange objects in the school, the playground, and the immediate neighbourhood. They should then proceed to actual measurements—here the teaching can be brought into line with the arithmetic work,—and these measurements should first of all be done in a small area, and by a rough-and-ready method, such as stepping. Measurements by time should also, if possible, be practised, *i.e.*, a child should be made to walk certain distances which he has already paced, and the teacher should tell him how long he took to cover each. The next step should be to measure larger areas outside the school. When the child has acquired some fairly accurate idea of distance, he must be taught to represent what he has measured. This is a difficult step. The first plan drawn must be the plan of a small space, such as the school-room, and an easy and fairly efficient method of transition is to make the child step the space of which he is going to draw a plan, record his steps and then tell him that the length of his thumb-joint is to represent one step. When he has mastered the idea of drawing by scale, he should, if possible, be shown a map of the neighbourhood or village, and gradually trained to draw plans of larger and more complicated areas, the goal being to be able to draw a large scale plan of the neighbourhood. For geography teaching the children should not be confined to the school buildings. It is essential that they should be taken out to walk distances and to see with their own eyes.

Hygiene.—These lessons should be continued on the same principles and lines as those prescribed for Standard I. The scope should be, if possible, slightly extended so as to include some information as to how simple complaints—wounds, snake-bites, burns, etc.,—should be treated, how a drowning person should be handled, and infection and contagion avoided, etc.

Supplementary subjects for Standard II.

(*a*) *Elementary Drill.*—More difficult exercises on the lines prescribed for Standard I.

(*b*) *Hand and eye training, including drawing.*—Drawing in pencil natural objects, the drawing of which has formed part of the compulsory curriculum; the drawing of natural objects from memory should occasionally be practised.

In addition to the above, *mat-work*, *basket-weaving* and *paper-folding* may be introduced, if considered desirable.

(*c*) *Arithmetic.*—Revision of the work prescribed in the compulsory course, calculations and problems in connection with the compound rules.

(*d*) *Nature Observation Work—Animal Life.*

See instructions (*a*) given under the head of "*Nature observation work.*"

A class calendar should be kept in which children's observations of animal life should be regularly recorded.

Continuation of the work prescribed for Standard I, leading to a consideration of the principal types of animal life. Vertebrate animals should be taken before Invertebrate, and the following order of treatment is suggested :—

Vertebrates.—Mammals, amphibians and fish, birds and reptiles.

Invertebrates.—Snail, bee, spider, lobster, earthworm, etc.

Animals should be observed and talked about in relation to their natural surroundings.

NOTE ON SCHOOL GARDENS.

In connection with the study of plant life, the importance of which has been insisted upon in the syllabus, the provision of school gardens should be considered as most desirable. Where a garden is impossible, plants should be grown in boxes or pots. The attention of school managers, teachers and others is invited to the following extract from some remarks on school gardens made by Mr. F. G. Sly, Officiating Inspector-General of Agriculture in India :—

"The master must use real objects, in order to cultivate in the child the habits of observing and thinking. In this matter, school gardens are of primary importance. I recognize the difficulties that in some parts stand in the way of providing each rural school with a garden, but these might be overcome more often than they are. Where this is impossible, a very great deal can be accomplished by growing plants in boxes and pots. The right use of a school garden or school pots is not always enforced. I have seen school gardens in which the whole of the work was done by the school watchman and which served the sole purpose of growing a few English vegetables for presentation to an inspecting officer. The best school gardens visited by me serve the useful purposes of beautifying the school surroundings and of giving some manual training to the children, but even these objects are of secondary importance. The real object of a school garden should be to supply materials for object-lessons in which the pupils can study the growth of plants. It should be a garden where 'nature is studied in its relations to the child, from the child's standpoint, by the teacher with the children.' If there is not room for each child to grow his own patch, each class should jointly cultivate its own plot, not in order to produce the best results, but to observe and study plant growth. Under the guidance of the teacher, the child should observe the parts of a seed, the plant food in it, the process of germination and the conditions necessary for it. In each stage of the growth of the plant he should pull up a specimen and observe the roots, their uses and their growth; the stems, their uses and structure; the leaves, their uses and structure; the flowers, their parts and uses, and methods of fertilization; the fruits and seeds, their formation and uses, methods of disposal and the like. He should observe the soil and its composition, the effect of plant food and manures. The garden should be deliberately used to give object-lessons in failures as well as in successes in connection with soils, drainage, manures, weeds and the like. School gardens need by no means be expensive; a portion of the school compound can often be utilized, and the commonest seeds obtained free in the village are as useful as those purchased from a merchant. In any case, the cost of growing some plants in pots and boxes is infinitesimal. Plants collected from the roadside and cultivator's field can never take the place of a school garden. The child must *do* the things himself; he must sow his own seed and observe the growth of his own plants."

Syllabus of Studies for the Infant Section and Standards I and II of Girls' Schools.

INTRODUCTION.

THE purpose of a school is to form and strengthen the character and to develop the intelligence of the children entrusted to it, and to make the best use of the school years available in assisting them to fit themselves for the work of life.

The formation of character must always be one of the main aims of education, and every part of school-life has some influence in this regard, whether for good or evil. It must, for example, be our constant endeavour to adapt the teaching of a school to the attainments of its pupils, and this not merely to secure due intellectual progress, but because children will acquire the bad habit of idleness both when the work demanded of them is too easy, and also when it is too hard. Moreover, the good moral training which a school should give cannot be left to chance; on this side no less than on the intellectual side the purpose of the teacher must be clearly conceived and intelligently carried out.

Something may be done through the expression and reading lessons. In these the children may be taken through the biographies of typical heroes or heroines, and these biographies should be treated in the main with a view to illustrating the actions of real persons and the principles of conduct and qualities of character which promote the welfare of the individual and society.

The lives of great men and women, carefully selected from all stations in life, will furnish the most impressive examples of obedience, loyalty, courage, strenuous effort, serviceableness—indeed of all the qualities which make for good citizenship. The teacher should place in relief those actions of her heroes or heroines which exhibit their higher qualities, but should take care not to raise them too far above the level of common humanity by the omission of their faults or shortcomings. She should make the picture a life-like and instructive exhibition of character, and of the effect on the individual and on those around him, for good or evil, of the acts recorded.

A similar appeal can be made to the imagination of children by the use of music in well-chosen songs, or of appropriate passages from the best literature of their mother-tongue.

Above all, school-life must prevent children from forming bad habits, and this it can only do by training them in good habits and, if possible, in good conduct, by which is meant something wider than the mere cheerful observance of school regulations. In the matter of this moral training the most important factor will be the habitual conduct of the teacher in the school. If she is thorough, patient, kind but firm, and scrupulously fair, these traits will evoke similar traits in her pupils, and will give point and force to any moral instruction she may attempt. A teacher who is obviously slipshod and lazy discoursing to children about the value of industry and thoroughness is an absurdity which cannot but prove morally disintegrating to a child. Stories in readers designed to inculcate morals tend, if silly, as they frequently are, to make moral instruction ridiculous. Even if they are good, they are of little value unless they are backed by personal example.

The every-day incidents of school-life will enable the teacher to impress upon the children the importance of punctuality, of good manners, of cleanliness and neatness, of cheerful obedience to duty, of consideration and respect for others, and of honour and truthfulness in word and act. Children will notice such details in the conduct of a teacher as punctuality, order, neatness and gentleness, and they will imitate what they see and hear. They are quick to observe; and if the teacher's conduct is in these respects defective, her example must almost certainly have a disastrous effect on the habits of the pupils. Thus the punctual and methodical performances of duties, even in matters of trivial routine, will impress upon the children better than any lesson the importance of orderliness, and the good habits of the teacher will be even more powerful than her express requirements in shaping her pupils for the proper conduct of life.

Syllabus of Studies for the Infant Section and Standards I and II of Girls' Schools.

INFANT CLASS.

FIRST YEAR.

Ages 5—7.

THE principal aim of any school in relation to infants should be to provide opportunities for the free development of their bodies and minds, and for the formation of habits of obedience and attention. The infants of the first-year class should be confined to the simplest lessons designed to develop in them the power to express their thoughts and feelings and to observe with some degree of accuracy. They should also be initiated into a rudimentary conception of colour, form and number, and should be taught to exercise their limbs and to sing simple songs.

Observation and Expression.—The lessons designed to develop the power of expression will generally, owing to a lack of staff, have to be combined with *those designed* to develop *the power of accurate observation*. These lessons should usually take the form of talks between the teacher and the children about familiar things. The subjects will vary with the surroundings and conditions of the school; the essential point is that the themes selected should be well within the range of the children's comprehension and interest. Occasionally the children themselves should be asked to suggest a topic. When the chief aim of the lesson is the *development of the power of expression*, the subject may be a story of folklore, mythology or adventure, or even the outline biography of a striking character: when the chief aim is *the development of observation*, the subject of the lesson should always be some concrete object. This object should aways be placed before the children, and they should be given every opportunity of examining it. In these lessons the teacher should address herself to the children individually rather than to the class collectively, and her object should always be to make the children do most of the talking. Indeed throughout these lessons it is essential that the children should be trained and encouraged to talk individually. Collective answering or collective repetition of the words of the teacher by the class should never be allowed. These practices not only render these exercises valueless, but they are an actual hindrance to the development of genuine thought and free expression. Some children are shy, and therefore their natural curiosity, which should result in eager questioning, is repressed. These lessons, if properly conducted, will do much to remove this shyness, and to make the children accustomed to speak out in class. It is undesirable to fetter or repress a child's liberty of speech more than is actually necessary. Unnecessary repression makes a child less communicative and less able to express his own thoughts, consequently less capable of clear thinking.

When an observation lesson is given on a natural object, the object should always be treated as a living whole and in relation to its life. Even in the earliest lessons, the fact that each part of an animal or plant is what it is as contributing a necessary element to the life of the animal or plant, should always be kept in view. Thus from the first the teacher should by questioning lead her pupils to analyse the several impressions which go to make up their total

impression of the object, and then bring out the relation of each to the whole. After this process of analysis, the separate aspects should be reconstructed to restore the unity of the impression of the object as a whole. Great stress should not be laid on the utility to man of the natural object which is being studied.

First year.—The observation lessons of the first year of the infant class should deal with such flowers, fruits, plants, beasts, birds, insects and fish of the district as are likely to have impressed themselves most vividly on the imagination of the children. These objects will vary in the different districts, and as regards plant-life, it is essential that each object should be taken in its season : a lesson on the cotton tree flower should, for example, be given while the cotton trees are in bloom. The same principle will apply to fish, and in a minor degree to other animals. The following are given merely as illustrating the kind of objects which may be selected for these lessons :—

Flowers.—Cotton tree flower, jessamine, gold mohur, champak, convolvulus, bel flower, or any other type commonly found in the locality.

Fruits.—Papaya, pomelo, litchi, mango, plums, custard apple, plantain, pineapple, jack fruit, or any other type commonly found in the locality.

Plants.—Rice, Indian-corn, cotton, mustard, pulses, jute, or any other type commonly found in the locality.

Animals.—Domestic animals, cow, goat, cat, dog, etc.; Wild animals—tiger, monkey, elephant, or any other type commonly found in the locality.

Birds.—Crow, blue jay, maina, golden oriel, kingfisher, parrot, babui bird, bâk, snipe, duck, pigeon, bulbul, kite, or any other type commonly found in the locality.

Insects.—Mosquito, dragonfly, butterfly, bee, ant, beetle, or any other type commonly found in the locality.

Fish.—Hilsa, vetki, topshi, pabda, rohu, mirgel, katla, or any other type commonly found in the locality.

(*a*) *Colour.*—Children should be initiated into the appreciation of colour by being given objects, pieces of wool, flowers, coloured slips of wood or paper, which represent the colours red, yellow, green and blue. The children should be made to group these objects under the various colours.

(*b*) *Form.*—The children should be taught to draw on a large scale such natural objects as are simple in shape. This work should be done with chalk on blackboards.

(*c*) *Number.*—Children should be initiated into the idea of number by means of objects, which must be given to the children for them to handle. What the objects are is immaterial, so long as they are small and easily handled, but it is easier to secure a child's active co-operation, if the same kind of object is not always given. The children should first of all be given a small number of objects, not more than 20, and having learnt numeration so far, they should be made to understand the numbers 1—10, by making sets of each, dividing them into their component parts, etc. Thorough familiarity with these numbers should be aimed at, rather than rapidity of progress. When these numbers have been grasped, the number of objects given to the children may be increased and the process of grouping and analysis continued. In this way the principles underlying the four simple rules of arithmetic should gradually be elucidated. The infants of the first-year class should be taught the principle of addition by being made to put together sets or groups of numbers which they have made. Thus from the first children can be taught to add rather than to count by units. The infants of this class should also be taught to construct multiplication tables up to 5×10. No table should be taught until it is constructed. Children should be gradually taught to write numbers from 1 to 50 in figures.

Reading and hand-writing.—The children in this class should be taught to recognize the simplest sounds of their vernacular language. This should be done by putting before them, not isolated letters, but letters combined into short words. Words of two consonants should first of all be used. The order in which these sounds are taken is important, and experience has shown that it is best to begin by calling attention to the sounds that are produced by the visible organs of speech, *i.e.*, the lips, and to proceed later to those produced by organs only partially visible or wholly invisible. Labial consonant sounds should therefore be taken first, then dental, then cerebral, then palatal, and finally guttural. It should be noticed moreover that such a sound as that of ণ্ (ণ্) can be best observed at the end of a word, where it can be easily isolated and repeated after the word has been pronounced. The teacher should from the first put small words before the children, but until the simple sounds have been mastered, she should use each word to illustrate especially one consonant sound. At a very early stage, for example, she would take the word ভণ্ (ভণ), but she would partially disregard the ভ (ভ) sound and make the children dwell on the ণ্ (ণ) sound in the manner described above. When a short word has been treated in the manner described, the children should be taught to copy it on a large scale either in chalk on blackboards or in trays of sand on which they can make impressions with their finger tips. Towards the end of the year palm-leaves may be used for this purpose. After the letters have been learned in the manner prescribed, the alphabet should be taught. An alphabet book may be used, but it is not to be considered in any way compulsory.

Nursery rhymes, action songs, free physical exercises.—The children should be taught to sing nursery rhymes and simple household songs. They should also, if possible, be taught action songs dealing with the every-day activities of village life. These action songs should be connected with games, for in this way the limbs and lungs of the children can be freely exercised at the same time. Children should also be encouraged to play such games as *hide-and-seek*, etc. In the absence of action song games these should form the principal medium of physical exercise. The youngest infants should not be made to do set drill.

Needle-work.—None.

INFANT CLASS.

SECOND YEAR.

Ages 6—8.

Observation and Expression.—The lessons designed to develop the power of expression should now aim definitely at training the children to reproduce their thoughts in logical sequence. The topics of the lessons may therefore be gradually expanded into greater detail, and the conversational form of the lessons gradually give way to a system of more continuous narration on the part of the teacher. Thus towards the middle of the year the class should be able to follow a simple story as it is narrated to them by the teacher. After the story has been told individual children should be asked to reproduce the gist of it in their own words. In the transition from conversation to continuous narration great care should be taken to ensure that the children are actively following the story. If the teacher finds that individual children are not able to reproduce the gist of the story in their own words, she may assume that they have not been actively following her and have recourse again to the more conversational method. Similarly the scope of the lessons designed to develop the power of accurate observation may be extended, and should aim at giving the children definite information about some of the most familiar natural objects with which they are daily surrounded. It must be remembered however that these lessons will fail of their main object if the information is simply told to the children without their being made to discover it for themselves. The course of lessons must be systematic, one lesson leading up to the next, and the later lessons constantly requiring some of the earlier lessons for their explanation. The object of each lesson should be the discovery of some new fact, but it is quite useless to give children various items of information about a number of disconnected natural objects. The study of plant life is recommended as capable of being systematically handled easily and economically; and as it is especially adapted to rural schools, it must on no account be neglected in them. The teacher should make an especial study of at least one branch of nature study. Technical terms shall be, as far as possible, avoided. These lessons should not always be given in the school building. The children should be taken out by the teacher and encouraged to collect specimens, etc.

Second year.—In the second year of the infant class the lessons on natural objects should be continued, but some very elementary lessons on the most prominent natural phenomena should be included. The children should, for example, be made to observe the varying position of the sun at the various seasons of the year and how these different positions are accompanied by varying temperatures. It will not be possible in this class to explain many of the phenomena observed; but if the children are made to see for themselves, their observations can be made the basis of further instruction. The children can, for example, be made to see the gathering of the clouds in the rains; and thus though it may not be possible for them at this stage to understand the monsoon, they will in this way acquire material from which observations leading to a proper understanding of the monsoon can start. These lessons should centre round the seasons of the year and should be, as far as possible, brought into line with the lessons on plant-life. Thus a simple lesson on the rains might well lead to a lesson on the crops which ripen at that season, such as early rice or jute.

Object-lessons on common domestic objects may also be given both to the first and to the second year infant classes.

(*a*) *Colour.*—The children should be taught, by the method indicated for the children of the first year, to recognize orange, indigo and violet, and to distinguish the various colours one from the other.

(*b*) *Form.*—The drawing of natural objects on blackboards should be continued. The children should also be taught to model in clay the natural objects put before them for the observation lessons.

(*c*) *Number.*—The children should be taught by means of concrete objects the principles underlying subtraction and division; they should also be made to construct the multiplication tables up to 10×10. They should then be made to work out, by means of the objects given to them, simple calculations and problems, involving the application of the four simple rules. When the children have learnt to write figures, they should be shown occasionally how to express on paper sums which they have already worked mentally or with the aid of objects. There should be no attempt during this year to make children work calculations on paper. The calculations and problems should, therefore, be confined to small numbers which do not require the use of pencil and paper.

Reading and Hand-writing.—When the children have mastered the simple sounds and learnt the combination of simple sounds into words, they should be taught to recognize the more complex sounds, such as those represented by compound consonants, and the combination of consonants and vowels other than অ (অ). These sounds should be taught by means of short words and not by letters taken by themselves. These words may be either written by the teacher on the blackboard, or reading charts prepared on these principles may be used. The words put before the children should be copied by them on a large scale in one of the ways indicated in the syllabus of the Infant first-year class. A simple literary reader should be introduced into this class.

Nursery rhymes, action songs and games, physical exercises.—The infants of the second-year class should join with the infants of the first-year in their nursery rhymes, action songs and games. Any child who is in the infant class, but is in the opinion of the teacher too old to profit by these childish amusements, should not be compelled to take part in them.

Needle-work.—Needle-drill and hemming.

STANDARD I.

Age about 8 years.

Reading.—The main purpose of teaching to read is to enable the pupils to master printed or written matter for their own information. Silent reading should, therefore, be practised from the first, and the teacher will soon get the children into the way of this, if, to begin with, she gives them short pieces to read and after a short time goes round to the children individually and asks for an account in their own words of what has been read. Such pieces should be full of incident and interest. As regards reading aloud, clearness of utterance and fluency should always be kept in view, but it is also essential that the children should be taught to read intelligently. The teacher should make the gist of the piece clear before it is read, so that the general meaning may be mastered before it is read out in class. Without this the reading must be mechanical because it is unintelligent. It is advisable that the teacher should occasionally read out a passage to the class by way of illustration; but in this case also the class should go through the piece beforehand. The reading material put into the hands of the children is of the greatest importance. The Primer should contain nothing which is not written in good language and in words which will not be easily intelligible to all. The arrangement of each piece must be logical, and the language must be good in so far as each sentence must express clearly and straightforwardly the meaning which it is intended to convey. The Primer should contain stories which fall within the range of the children's comprehension and interest; descriptions of the various scenes and episodes of rural life should also be included. Provision should also be made in the Primer for acquainting the children with some of the more impressive stories of English and Indian history. The whole should be written in an easy narrative style. A passage having been prepared beforehand and the difficulties elucidated, the actual reading lesson should be as little as possible interrupted by the teacher, and all long disquisitions on points suggested by the subject-matter should be avoided. At the end of every reading lesson the children should be questioned on the subject-matter individually, and should be trained to give individually and in their own words an account of what has been read.

Arithmetic.—Notation up to 1,000. Tables up to 12×12 and the 16 times table to be constructed and learnt. Calculations and problems involving the application of the four simple rules, the principles of which will have been learnt in the infant classes. These calculations and problems should be worked both mentally and with the aid of concrete objects. In the latter part of the year work should be done regularly on paper, but the problems and calculations set should not take the children into numbers above 1,000.

Hand-writing and spelling.—The teacher should write two or three words on the black-board and the children should copy these on paper. The words copied should always be those which the children have recently seen at their reading lessons. Spelling being almost entirely a matter of the eye, the children should never be made to learn by rote long columns of words, and no spelling should be taught apart from the words contained in the writing and reading lessons. When the first difficulties of hand-writing have been mastered, children should be made to transcribe sentences from the passages in the Primer which they have recently gone through in class.

Drawing and Modelling.—The drawing of natural objects with chalk on black boards should be continued, as also the clay modelling. This work should be kept in close connection with the nature observation work, the objects selected for drawing or modelling being invariably those with which the children are dealing in their observation lessons. Habits of observation are better cultivated by the thorough examination of a few objects than by a less careful examination of many; therefore it is desirable that the children should be made to model the objects which they have been given to draw, and *vice versâ*.

Composition.—The composition in this class should be entirely oral, and should consist to a considerable extent of the reproduction by individual children in their own words of the subject-matter of the reading lessons. Another method which may with advantage be employed is to give the class a short piece of narrative to read through to themselves, and then to require individual children to give the gist of what has been read. It should be remembered, however, that the teaching of composition does not mean more than the training of the children to express what is in their minds. What is taught is not really assimilated until it can be reproduced. Therefore the teaching of composition should form a part of every lesson given in the school. It is advisable to set apart a certain amount of time for these lessons, but the principles which ought to underlie them and the object at which they ought to aim should never be lost sight of in any lesson.

Nature observation lessons :—

(*a*) A definite and systematic course of these lessons should be continued on the lines and principles laid down for the second year Infant class. The drawing and modelling work should be supplementary to and illustrative of these lessons.

(*b*) A class calendar should be kept in which the children's observations of all natural phenomena and plant and animal life should be regularly recorded.

1. *Natural Phenomena.*—Continuation of the work begun in the second year of the Infant class. The observation of sunrise, dawn, sunset, day and night, shadow, the varying length of day and night.

2. *Plant life.*—Germination, the growing of beans, peas, mustard on damp flannel. the growth to be observed and sketched at every stage; the observation of the different parts of a plant, root, stem, leaf, blossom, fruit. In these relations such common plants, as the marigold or mustard, or climbing plants, such as peas or convolvulus, should be shown to the class.

In rural schools, lessons on the following should be included:—cereals, pulses, oilseeds, vegetables, sugar, straw, jute, hemp, bamboos, timber and spices.

Animal life.—Continuation of the lessons on the same lines as those prescribed for the second year of the Infant class, the treatment of the subject being slightly more advanced: the distinction between herbivorous and carnivorous animals.

Plants and animals should be observed and talked about in relation to their natural surroundings.

Elementary Drill.—Simple exercises. Special attention should be paid to exercises designed to counteract the effect of bad habits which may be contracted at school, such as sitting with the shoulders rounded and the chest

contracted, etc. The subject is not compulsory, but should be taken whenever possible. The Ling system of drill is one that is recommended.

Hand and eye training, including drawing.—(1) Drawing in pencil natural objects, the drawing of which in chalk has been practised in connection with the nature observation lessons. (2) Modelling in clay natural forms, such as fruits and leaves.

In addition to the above *mat-work*, *basket-weaving* or *paper-folding* may be introduced, if considered desirable.

Hygiene and Domestic Economy.—Bathing, clothing, necessity for cleanliness. Simple laws of health, such as those relating to rest, exercise, sleep, etc.

Needle-work.—Top-sewing and back-stitching.

STANDARD II.

Age about 9 years.

Reading.—The reading lessons should be continued on the lines laid down for Standard I. The stories contained in the Primer for this class should be written in the same easy narrative style as that prescribed for Standard I, and equally in this as in the lower class should the language used be such as is generally intelligible to all. The stories should be slightly more detailed and complex than those written for Standard I. In the case of rural schools, the Primer should also contain short and simple descriptions of the chief crops, fruits, etc., of the district, the conditions under which they thrive, their value, use, etc. The lessons should be closely connected with the nature observation lessons, the observation lesson on a mango, for example being followed by a reading lesson on the same subject. Stories of the more important events of Indian and English history should be included in the Primer.

Arithmetic.—Notation above 1,000. The children should continue to work mentally with the aid of concrete objects, and on paper, problems and calculations involving the application of the four simple rules. They should also be taught the value of the various coins of the currency, and the weights and measures which are in use in villages. These should not be taught merely by rote. The children should be supplied with token coins, and they should be taught to work out reductions, etc., with these coins, before abstract reductions are attempted. When the children are able to make reductions in the concrete, sums which they have worked in this way may be expressed on the blackboard or on paper, and an easy transition thus made to abstract work. Similarly, with weights, an ordinary pair of scales (*tol dari*) should, where possible, be provided, and the children not only shown their use, but made to work out for themselves at the scales reductions from seers to chitaks, etc. The school building should be measured by the children under the guidance of the teacher, and the measurements recorded. Having thus mastered the meaning of weights and measures, they can, if their capacity and time permit, be made to work out abstract calculations.

As regards "*Subhankari*," while it is recognized that various tables must be learnt by heart, their practical application should be insisted upon and the arithmetical principles underlying them should be explained.

The course to be followed will include the following:—Notation and numeration of *kará*, *ganda*, *buri*, *pan*, *chouk*, *káthá*, and *seer* up to 100. Tables of money, weight and measures in common use, and simple problems thereon. *Sayiá*, *deriyá*, *aráyia*.

Hand-writing and spelling.—The children should be taught to write by being made to copy words and sentences written by the teacher on the blackboard. They should also be made to transcribe passages which they have recently read in the Primer. Passages from the Primer should also be written out by the children at the dictation of the teacher, this exercise being varied by the occasional repetition to the children or the reproduction in the teacher's words of a story either told or read to them for the purpose of a composition exercise. When the children have acquired some facility in

writing, the teacher should show to the class various specimens of hand-writing and draw attention to their peculiarities. In connection with the hand-writing work, the rudiments of postal information should be imparted (*vide* Circular No. 85 of the Director of Public Instruction, Bengal, dated the 16th June 1905).

Drawing and Modelling.—The drawing on blackboards and clay modelling should be continued on the lines laid down for Standard I, it being always kept in mind that this work is to be treated as supplementary to, and illustrative of, the nature observation work.

Nature Observation Work.—(*a*) A systematic course of lessons on the lines prescribed for the lower classes should be continued, care being taken that these lessons supplemented and illustrated by the drawing and modelling work should lead up to the descriptive reading lessons about crops, etc., mentioned in the reading syllabus for this standard. Thus—to take an example of a natural object, which enters very largely into the children's lives, a mango,—by an observation lesson on a mango the several impressions which go to make up a child's total impression of the object should be analysed and the relation of each to the whole brought out. By being made to model it in clay, she learns really to know its shape; in her reading lesson she learns something about the conditions under which it grows, its uses and value, and, finally, the mango can be made a subject of composition, either oral or written. If written, the composition should be illustrated and the faculty for memory drawing thus brought into play.

(*b*) A class calendar should be kept in which the children's observations, all natural phenomena and plant life should be regularly recorded.

1. *Natural Phenomena.*—The observation of such phenomena as air, wind, evaporation, rain, the rainbow, dew, the action of water on land, etc.

2. *Plant life.*—Continuation of the work described for Standard I. Observation of roots, stems and leaves, with a view to their simple classification.

3. *Animal life.*—Continuation of the work described for Standard I, leading to a consideration of the principal types of animal life. Vertebrate animals should be taken before invertebrate, and the following order of treatment is suggested:—

Vertebrates.—Mammals, amphibians and fish, birds and reptiles.

Invertebrates.—Snail, bee, spider, lobster, earthworm, etc.

Plants and animals should be observed and talked about in relation to their natural surroundings.

Composition.—The teaching of composition should be continued on the same lines and principles as are laid down for Standard I. The children should also occasionally be made to reproduce in writing what they have read or heard. As regards this, however, it must be remembered that the difficulties inseparable from writing hamper a child's freedom of expression and that while it is important that these difficulties should be removed, it is essential that they should not be allowed to check a child's natural expansiveness, which should by this time have been developed into a certain power of expression. The easiest method of transition from oral to written composition is for the teacher to write on the black-board at the children's dictation. This will enable her to explain the division of a passage into sentences. When the passage is written on the black-board, the children should be made to transcribe it. Written composition, however, should be only an occasional exercise; oral composition must never be discontinued.

Again while neatness should be insisted on, children should not be allowed to stop and rule lines, etc. Such practices are not only a waste of time, but they divert a child's attention and so hamper her power of expression. At these lessons excessive attention should not be paid to the formation of letters, etc.; for this also tends to diversion. The main object of these lessons is not the formation of handwriting, but the development of the power of expression.

Poetry.—The Primer should contain pieces of simple but good poetry, and these should be learnt by heart by the children. Extreme care should be taken that no piece is included in the Primer which has not at least a strong claim to be considered poetry. It has been said "that learning by heart is valueless, unless in the process the memory is enriched with a store of beautiful thoughts, expressed in beautiful language, which will serve as a touchstone to the scholar's own methods of expression and be a constant source of pleasure to him." When a piece of poetry has been selected for the class to learn by heart, it should always first of all be read aloud by the children individually. It should moreover always be learnt individually and never dictated to the class and then repeated in unison. Such a device is the merest mechanical drill and destroys any value recitation may have. It is not in the least necessary that all the children in the class should learn the same passages or the same amount of poetry. Capacities vary, and few, if any poems, make the same appeal to all children. It is desirable therefore that, as far as circumstances permit, the poetry taught to each child should be adapted to her capacities and tastes.

Geography.—The aim of teaching geography in these schools is to enable the children to observe for themselves the chief physical features of their actual surroundings. It will probably not be possible to take the children very far in this direction; something, however, will have been gained, if the children can be trained to an accurate apprehension of the spatial relation of the various divisions of their neighbourhood. It should be remembered that geography ought not to be regarded as an isolated part of the curriculum. It is impossible, for example, to give rational teaching about natural products without treating of the kind of places in which, for example, a particular plant, etc., grows. The children will, for instance, be told that rice will not grow in a place where there is not plenty of water attainable. From this fact the teacher would naturally pass to the reason why water lies in certain parts of the village and not in others. When she is giving an observation lesson it is not advisable for her to embark widely on side issues. The correct method is that one part of the curriculum should supplement the other. The aim of the school being to train children to observe intelligently what they see daily around them, the teacher cannot neglect altogether the most important physical features of the locality. A rational study of these combined with instruction designed to make the children appreciate to some extent dimension and spatial relation can be made up into a system of geographical teaching, which, though limited, is both educationally sound and capable of almost infinite development. As a method of teaching dimension and spatial relation, it is suggested that the children should first of all be taught to notice the variation in the shadow of the sun cast by the school building at different

times of the day. In this way they will learn by actual observation the cardinal points, and will thus get a fixed standard by which to arrange objects in the school, the playground and the immediate neighbourhood. They should then proceed to actual measurements—here the teaching can be brought into line with the arithmetic work,—and these measurements should first of all be done in a small area, and by a rough-and-ready method, such as stepping. Measurements by time should also, if possible, be practised, *i.e.*, a child should be made to walk certain distances which she has already paced, and the teacher should tell her how long she took to cover each. The next step should be to measure larger areas outside the school. When the child has acquired some fairly accurate idea of distance, she must be taught to represent what she has measured. This is a difficult step. The first plan drawn must be the plan of a small space, such as the school-room, and an easy and fairly efficient method of transition is to make the child step the space of which she is going to draw a plan, record her steps and then tell her that the length of her thumb-joint is to represent one step. When she has mastered the idea of drawing by scale, she should, if possible, be shown a map of the neighbourhood or village, and gradually trained to draw plans of larger and more complicated areas, the goal, being to be able to draw a large scale plan of the neighbourhood. For geography teaching, the children should not be confined to the school buildings; it is essential that they should, whenever possible, be taken out to walk distances, and to see with their own eyes.

Elementary Drill.—More difficult exercises on the lines prescribed for Standard I. The subject is not compulsory, but should be taken whenever possible.

Hand and eye training, including drawing.— Drawing in pencil the natural objects, studied in connection with the nature observation lessons; the drawing of natural objects from memory should occasionally be practised.

In addition to the above, *mat-work, basket-weaving* and *paper-folding* may be introduced, if considered desirable.

Hygiene and Domestic Economy.—The whole method of keeping clean the hut or house and its sourroundings.

Food.—Cleanliness to be observed. Cleaning of utensils. Supply of good water for cooking food. How to ascertain when fish, vegetables, etc., are fresh. The cooking of rice and the advantage of eating it warm.

Sleep.—Regular hours of sleep. Disadvantage of excessive sleep in the daytime. Use of mosquito curtains. Airing and sunning of bedding and blankets.

Needle-work.—Running, felling and patchwork.

NOTE ON SCHOOL GARDENS.

In connection with the study of plant life, the importance of which has been insisted upon in the syllabus, the provision of school gardens should be considered as most desirable. Where a garden is impossible, plants should be grown in boxes or pots. The attention of school managers, teachers and others is invited to the following extract from some remarks on school gardens made by Mr. F. G. Sly, Officiating Inspector-General of Agriculture in India:—

"The master must use real objects, in order to cultivate in the child the habits of observing and thinking. In this matter, school gardens are of primary importance. I

recognize the difficulties that in some parts stand in the way of providing each rural school with a garden, but these might be overcome more often than they are. Where this is impossible, a very great deal can be accomplished by growing plants in boxes and pots. The right use of a school garden or school pots is not always enforced. I have seen school gardens in which the whole of the work was done by the school watchman, and which served the sole purpose of growing a few English vegetables for presentation to an inspecting officer. The best school gardens visited by me served the useful purposes of beautifying the school surroundings and of giving some manual training to the children, but even these objects are of secondary importance. The real object of a school garden should be to supply materials for object-lessons in which the pupils can study the growth of plants. It should be a garden where 'nature is studied in its relations to the child, from the child's standpoint, by the teacher with the children.' If there is not room for each child to grow his own patch, each class should jointly cultivate its own plot, not in order to produce the best results, but to observe and study plant growth. Under the guidance of the teacher, the child should observe the parts of a seed, the plant food in it, the process of germination and the conditions necessary for it. In each stage of the growth of the plant he should pull up a specimen and observe the roots, their uses and their growth; the stems, their uses and structure; the leaves, their uses and structure; the flowers, their parts and uses, and methods of fertilization; the fruits and seeds; their formation and uses, methods of disposal and the like. He should observe the soil and its composition, the effect of plant food and manures. The gardens should be deliberately used to give object-lessons in failures as well as in successes in connection with soils, drainage, manures, weeds and the like. School gardens need by no means be expensive; a portion of the school compound can often be utilized, and the commonest seeds obtained free in the village are as useful as those purchased from a merchant. In any case, the cost of growing some plants in pots and boxes is infinitesimal. Plants collected from the roadside and cultivator's field can never take the place of a school garden. The child must *do* the things himself; he must sow his own seed and observe the growth of his own plants."

RESOLUTION ON THE ANNUAL REPORT ON EMIGRATION FROM THE PORT OF CALCUTTA TO BRITISH AND FOREIGN COLONIES FOR THE YEAR 1906.

GENERAL DEPARTMENT—EMIGRATION.

Darjeeling, the 12th June 1907.

RESOLUTION—No. 1055T.—G.

READ—

The Annual Report on Emigration from the Port of Calcutta to British and Foreign Colonies for the year 1906.

No important administrative measures were adopted by this Government during the year under review. An addition was made to Rules 6 and 7 of the Rules framed under Act XXI of 1883, empowering Subdivisional Magistrates to grant certificates of character and identity to recruiters, and Rule 133 was amended in order to provide that unmarried women should be so located as to separate them from the quarters of the single men and the crew on board emigrant vessels. The Government of Fiji passed two ordinances amending the law relating to Indian immigrants. The most important of these lays down that in future the right of an immigrant to a free return passage to India shall be forfeited, unless it is exercised within two years from the date when it accrues. Several minor alterations were also made in the laws relating to Indian immigrants in Natal and Mauritius.

2. Seven emigration agencies were at work during the year, six representing the British Colonies and one the Dutch Colony of Surinam. There was a general increase in the demand and supply of labour for the Colonies, the total number of labourers requisitioned and despatched during the year amounting to 13,276 and 13,362 as against 8,157 and 8,933 respectively in 1905. In all 23,336 emigrants or 8,040 more than in the previous year were registered in 1906. This increase is attributed to the continuance of scarcity and the consequent rise in the prices of food-grains in the recruiting districts. As in previous years recruitment was most vigorous in the United Provinces of Agra and Oudh, from which 74·99 per cent. of the emigrants came: the districts of Fyzabad, Basti and Cawnpore furnished the largest numbers.

3. Of the 23,575 emigrants admitted into the sub-depôts 2,862 were rejected by the medical officers in the recruiting districts as unfit to emigrate. Twenty thousand two hundred and thirty-three emigrants arrived at Calcutta and were accommodated in the depôts at Garden Reach. This number was reduced by rejections, releases and other causes to 14,827, of whom only 14,035 were sent to the Colonies during the year, the remainder (792) being left for subsequent despatch. The figures show an increase over those for 1904 and 1905, when 7,451 and 12,651 persons respectively were admitted into the depôts and 7,135 and 9,322 embarked for the Colonies. The largest number (3,866) of emigrants was received by Natal and the smallest (619) by Mauritius.

4. Though the sanitary arrangements of the depôts were satisfactory, the amount of sickness and mortality was higher than in 1905; and this is ascribed by the Protector of Emigrants to the general unhealthiness of the year. The number of deaths caused by cerebro-spinal meningitis is a matter for grave consideration. A report on this subject was submitted by the Sanitary Commissioner, Bengal, to the Sanitary Commissioner to the Government of India in March last.

5. During the year under review 5,718 immigrants returned from the Colonies with savings amounting to Rs. 9,12,277-6-6, the average for each immigrant being Rs. 159-8-8 as compared with Rs. 171-13-4 a head in the preceding years. On the other hand, as many as 2,413 emigrants or 18·73 per cent. of the total number of returned emigrants came back with no savings at all. As in previous years, the immigrants in Natal sent the largest remittances by money orders, the total amount so sent being over 14 lakhs.

6. The accounts of the Emigration Fund show that the year closed with a balance of Rs. 14,688-11-3. This surplus is chiefly due to the increase of receipts on account of the larger number of emigrants embarked during the year.

7. The thanks of the Lieutenant-Governor are due to Dr. Banks for his careful administration and report. This officer held the office of the Protector of Emigrants throughout the year, with the exception of 40 days when he was on leave.

By order of the Lieutenant-Governor of Bengal,

H. C. STREATFEILD,

Offg. Secretary to the Govt. of Bengal.

GENERAL SUMMARY.—Rain was fairly general in the Province, the fall being light in most districts. In Cooch Behar and Darjeeling the rainfall was heavy, while in Midnapore, the 24-Parganas, Darbhanga, Purnea, Cuttack and Balasore, it was moderate. More rain is wanted in Burdwan, Hooghly, Murshidabad, Champaran, Muzaffarpur, Bhagalpur, the Santhal Parganas and Ranchi. Sugarcane is doing well, but it is reported to have been injuriously affected for want of rain in parts of Burdwan. In Darbhanga the number of persons on gratuitous relief is 11,208, on test-works 2,675, and on relief-works 20,684. Cattle-disease is reported from eight districts. Fodder and water are generally sufficient. In parts of Ranchi fodder is reported to be scarce. The prices of common rice has risen in three and fallen in five districts.

SUMMARY OF THE RAINFALL OBSERVATIONS TAKEN IN BENGAL DURING THE MONTH OF MAY 1907.

During the month of May the rainfall was in general defect throughout the whole Province. In South-West Bengal, the fall was slightly in excess of the normal in the district of Howrah. In Bihar it was normal in Bhagalpur and slightly above the average in the Santhal Parganas. In Orissa and Chota Nagpur it was in great defect. The deficiency was well marked in the districts of Birbhum and Bankura in South-West Bengal, in the districts of Patna, Gaya, Saran, Champaran and Muzaffarpur in Bihar, in the districts of Angul and Puri in Orissa, and in the districts of Hazaribagh, Ranchi, Manbhum and Singhbhum in Chota Nagpur. All the above districts recorded less than 50 per cent. of the normal. On an average South-West Bengal received 4·08 inches, Bihar 1·59 inches, Orissa 2·23 inches and Chota Nagpur 0·73 inch. The departure from the normal was (—1·30 inches) in South-West Bengal, (—0·82 inch) in Bihar, (—1·92 inches) in Orissa, and (—1·55 inches) in Chota Nagpur.

The following table gives full data for comparison of the actual and normal rainfall of the month of May for all districts of the Province. The figures are derived from the average and actual rainfall of the rain-reporting stations in each district.

The first column gives the normal or average district rainfall as determined from the observations of past years. The second column gives the actual district rainfall as determined from the actual rainfall of the month at the reporting stations in each district. The third column expresses the ratio of the actual district rainfall of the past month to the normal rainfall as a percentage. The fourth column gives the same information as the third in a slightly different form, stating as a percentage how much the district rainfall of the month varied in excess or defect from the normal:—

The total fall from 1st January to 15th June 1907	18·77
The average fall of the corresponding period for 24 years, Surveyor-General's Office	15·07

The mean pressure, temperature, etc., are deduced from the traces of the Kundsen's Barograph and from eye observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Kew Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 85, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed at the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; t, thunder; <, lightning; K, thunderstorm; d, drizzling rain; p, passing temporary showers.

SUMMARY OF THE METEOROLOGICAL OBSERVATIONS TAKEN IN BENGAL AND IN EASTERN BENGAL AND ASSAM FOR THE MONTH OF MAY 1907.

At the end of the preceding month rain had been fairly general over North-East India. Rain then decreased on the 1st and 2nd of the month, but became nearly general again in Eastern Bengal and Assam on the 3rd and 4th. Weather then improved, and no rain fell up to the 9th, except in Assam, where rain continued to fall locally. Cloud decreased with the rainfall, and from the 5th to the 9th was reported only from Assam. Temperature was approximately normal. During the next week weather was dry in Bihar, Chota Nagpur and Orissa; rainfall, however, was fairly general in the remainder of the area under report on the 11th and 14th, and occurred daily in Assam. Skies were clear in the west of the division and cloudy in the east, and temperature was generally normal or in excess. During the week ending May 23rd, rain fell over the whole division, chiefly in the eastern half, and was most widespread on the 19th. Skies were clear or only lightly clouded in Chota Nagpur and Bihar and lightly to moderately clouded elsewhere, while temperature was nearly normal except on the 19th and 20th, when it was lower than usual in the western districts. During the remainder of the month rain fell every day in Eastern Bengal and Assam, and on most days in Orissa, while occasional rain occurred in the remainder of the division. Skies were thickly clouded in the eastern half of the division, and were generally clear or only lightly clouded in the west. Temperature was approximately normal except on the 25th and 26th, when weather was cooler than usual in the western and central districts.

The weather in the Bay was marked by two cyclonic disturbances, the first being a storm of considerable intensity. On the 3rd of the month the 8 A.M. observations indicated a tendency towards the establishment of a cyclonic circulation round the Andaman sea. Special observations called for at 18 hours on the same day, showed that very heavy rain was falling all along the Tenasserim coast. Winds at that time were generally light and the direction at Rangoon was southerly. During the next few hours a storm of considerable severity but very small extent appears to have developed rapidly or possibly passed into the Andaman sea from outside the reporting area, and indicated its existence by a rapid fall of pressure at Moulmein. It crossed the coast during the next 24 hours, giving torrential rain to and inflicting considerable damage on that station. A remarkable feature of the storm was the weakness of the winds at Diamond Island and Rangoon during its existence in the Andaman sea, the rapid fall of the barometer at Moulmein and a moderate northerly wind at that station being the only indications of disturbed weather, a few hours before it crossed the coast. The second disturbance was of moderate severity and like its predecessor it formed probably in front of a temporary advance of the monsoon current. It passed from the north-west of the Andamans over Diamond Island about midnight of the 15th. It broke up rapidly after it crossed the coast, and appears to have been felt to a small extent only at Bassein, near which station its centre must have passed.

Summary of temperature.—Mean temperature was about 2° in defect over Chota Nagpur and Orissa, but not far from normal over the rest of the reporting area. The highest temperature recorded was 110·6, and this was reported from Baukura and Daltonganj. The lowest was 61·2 reported from Gaya.

The following table gives the summary of the temperature of each of the seven meteorological divisions of the Provinces of Bengal and of Eastern Bengal and Assam for the month of May 1907:—

Summary of rainfall.—The rainfall work of the Province has been placed in the hands of the Director of Agriculture, Bengal, and the usual data regarding the actual and normal rainfall during the month are published by that officer. A short table, however, is attached to this report, giving the rainfall recorded during the month at the head-quarters of the various districts of the Province.

Rainfall was in general defect over the whole reporting area, Burdwan, Gaya and a few stations in Eastern Bengal alone recording an excess.

The mean pressure, temperature, etc., are deduced from the traces of the Kundsen's Barograph and are observations.

The maximum and minimum temperatures are obtained from self-registering thermometers. All the thermometers are verified, and the readings have been corrected to a standard constructed and verified at the Observatory. They are exposed under a thatched shed open at the sides, and are suspended four feet above the ground.

The barometer readings are corrected to those of the standard, Newman's No. 86, formerly at the Surveyor-General's Office.

The hygrometric elements are obtained from Tables III, IV, and V of the official tables computed in the Meteorological Office and based on Regnault's modifications of August's formula.

The directions and the movement of the wind are taken from the trace of a Beckley's anemograph.

The mouth of the rain-gauge is one foot above the ground. The rainfall reported on any day is for 24 hours preceding 8 A.M. of that day.

o, overcast; g, dark gloomy; d, drizzling rain; p, passing temporary showers; ●, continuous rain; q, squally; ⁄, strong wind.

CHINA SEA—THE PHILIPPINE ISLANDS—LUZON, EAST COAST—ALBAY GULF.

Rapurapu strait—Beacons and buoys established.

No. 490 (first publication).—The British Admiralty has given notice (No. 1361 of 1906) that the undermentioned beacons and buoys have been established to facilitate the navigation of Rapurapu strait as follows :—

(*a*) Two beacons have been erected on Rapurapu island, the rear beacon being in the shape of a white triangle, point downwards, about 13 feet high, erected about 100 feet within the coast line, and the front beacon a white triangle, point upwards, erected on the edge of the reef 14 feet above high water, both beacons having a black vertical stripe passing through their centres.

These two beacons in line S. 6° W. lead through the channel eastward of Middle reef. They have been placed on the chart at distances of $2\frac{1}{2}$ miles and $2\frac{5}{10}$ miles S. 8° W. respectively from East point.

(*b*) A red conical buoy, marked No. 2, has been placed in a depth of 4 fathoms off the southern edge of Dickerson or Derickson reef, situated at a distance of $2\frac{5}{10}$ miles S. 28° W. from East point.

(*c*). A red conical buoy, marked No. 4, has been placed in a depth of 4 fathoms on the south-eastern edge of Columbia reef, situated at a distance of $4\frac{5}{10}$ miles S. 48° W. from East point.

CHINA SEA—NATUNA ISLANDS.

Devonport reef—Probable position.—Montrado (Menterado) breakers—Non-existence of.

No. 491 (first publication).—The British Admiralty has given notice (No. 1366 of 1906) that a search has been made for Devonport reef in approximately lat. 3° 54½′ N., long. 108° 31½′ E., without any indication of its existence being discovered.

It is thought probable that the ship *Devonport* was lost on the easternmost of the Penungul reefs, on which a depth of 2½ fathoms has been recently found to exist in approximately lat. 3° 52¾′ N., long. 108° 29′ E. From this position the bearing of Kanodi island (S.W by W.) is the same as that given to fix the position of the Devonport; and if the second bearing (N.W.) given by the Devonport be applied to the summit of cape Senubing instead of Senua island, for which it may have been mistaken, it would place the vessel on the easternmost of the Penungul reefs, as already described.

The name of Devonport reef has therefore been transferred to the Eastern Penungul reef, the former Devonport reef being expunged.

Also, that a search for Montrado or Menterado breakers has also been made, but that no indication of its existence could be found, depths of from 40 to 50 fathoms being found over the position assigned to it. It has therefore been expunged from the charts.

Approximate position, lat. 3° 31′ N., long. 108° 4′ E.

(2) A rock, which dries 5 feet, in approximately lat. 20° 54′ 35″ N., long. 107° 6′ 0″ E.

(3) A rock awash in approximately lat. 20° 54′ 0″ N., long. 107° 5′ 0″ E.

(4) A rock awash (between two islands), in approximately lat. 20° 55′ 0″ N., long. 107° 7′ 55″ E.

(5) A cluster of rocks, which dry 5 feet, in lat. 20° 54′ 40″ N., long. 107° 8′ 20″ E.

(6) A rock, which dries 2¼ feet, southward of Castel island, in lat. 20° 53′ 50″ N., long. 107° 8′ 45″ E.

NOTE.—The dredged channel, with a depth of 2½ fathoms to the southward of Cone and Chenal islands, is only about 40 yards wide, it is advisable, therefore, not to pass too near the line of buoys marking the channel.

This Notice affects the following Admiralty Chart:—Approaches to port Courbet, No. 1169: Also, China Sea Directory, vol II, 1906, page 486.

CHINA SEA—TONG KING GULF.

Norway islands.—Intended alteration in light.

No. 7 (first publication).—The British Admiralty has given notice (No. 1417 of 1906) that it is intended shortly to alter the character of Norway islands light from white flashing every minute to *white flashing every five seconds*. The alterations, which would be commenced on November 1st, will probably take three months, during which period two *white fixed* vertical lights, visible from a distance of 12 miles in all directions, except from the northward, would be exhibited. These two lights, which will be masked in a northerly direction, will appear as a single light outside a radius of 9 miles; they must not, therefore, be mistaken for the *white fixed* light on Hondau.

Approximate position, lat. 20° 37½′ N., long. 107° 8¾′ E.

Further Notice will be given when this alteration has been made.

This notice affects the following Admiralty Charts:—Tong king gulf, No 2062; Kua Lacht to Kao tao shan island, No. 1955; approaches to port Courbet, No. 1169; List of Lights, part VI., 1906, No. 737; Also, China Sea Directory, vol. II., 1906, page 468.

Port Wakefield—Date of alteration of lights.

No. 12 (first publication).—With reference to Notice to Mariners No. 94, dated 9th March 1906, issued by this Office, the President of the Marine Board, Port Adelaide, has given further notice (No. 25 of 1906) informing Masters of vessels, Pilots and others that the Port Wakefield lights will be altered on the 19th November 1906, and will, on and after that date, show as mentioned hereunder:—

The present White Light on the end of the Wharf will be moved about three (3) feet westward, and be changed to a Red Light. The existing Red Light at the back will be changed to a bright light. These lights in line will lead midway between the two Outer Beacons instead of along the Eastern side of the channel, as at present.

This affects Admiralty Chart 2389b and Plan 2152.

AUSTRALIA, SOUTH.—Port Adelaide River

Outer harbour.—Signals to be observed at the Occulting buoy.

No. 13 (first publication).—The President of the Marine Board, Port Adelaide, has given notice (No. 27 of 1906) that Masters of Vessels, Pilots, and others about to enter the Port Adelaide river, shall, when at the Occulting Buoy, signal the dredgers by one prolonged blast of *50 seconds duration* on the whistle or syren, and repeat it every minute until such signal is answered from the dredgers. Vessels bound outwards shall give the same signal when abreast of No. 3 Light Beacon. Every dredger will repeat the above-mentioned signals if steam is up. If steam is not up then by waving a flag *by day* or a white light *by night*, and at the same time haul to one side of the fairway, and show the proper signals.

Masters and Pilots are cautioned to keep, as near as possible, on the line of leads so as not to pass the dredgers too close, and will also reduce speed when approaching and passing them.

This affects Admiralty Charts 2389*a* and *b*, and 1750 and 1752.

CHINA SEA—THE PHILIPPINE ISLANDS—LUZON, EAST COAST—ALBAY GULF.

Rapurapu strait—Beacons and buoys established.

No. 490 (second publication).—The British Admiralty has given notice (No. 1361 of 1906) that the undermentioned beacons and buoys have been established to facilitate the navigation of Rapurapu strait as follows :—

(*a*) Two beacons have been erected on Rapurapu island, the rear beacon being in the shape of a white triangle, point downwards, about 13 feet high, erected about 100 feet within the coast line, and the front beacon a white triangle, point upwards, erected on the edge of the reef 14 feet above high water, both beacons having a black vertical stripe passing through their centres.

These two beacons in line S. 6° W. lead through the channel eastward of Middle reef. They have been placed on the chart at distances of 2½ miles and 2$\frac{5}{10}$ miles S. 8° W. respectively from East point.

(*b*) A red conical buoy, marked No. 2, has been placed in a depth of 4 fathoms off the southern edge of Dickerson or Derickson reef, situated at a distance of 2$\frac{5}{10}$ miles S. 28° W. from East point.

(*c*). A red conical buoy, marked No. 4, has been placed in a depth of 4 fathoms on the south-eastern edge of Columbia reef, situated at a distance of 4$\frac{5}{10}$ miles S. 48° W. from East point.

CHINA SEA.—Natuna islands.

Devonport reef—Probable position.—Montrado (Menterado) breakers—Non-existence of.

No. 491 (second publication).—The British Admiralty has given notice (No. 1366 of 1906) that a search has been made for Devonport reef in approximately lat. 3° 54½′ N., long. 108° 31½′ E., without any indication of its existence being discovered.

It is thought probable that the ship *Devonport* was lost on the easternmost of the Penungul reefs, on which a depth of 2½ fathoms has been recently found to exist in approximately lat. 3° 52½′ N., long. 108° 29′ E. From this position the bearing of Kamodi island (S.W. by W.) is the same as that given to fix the position of the Devonport; and if the second bearing (N.W.) given by the Devonport be applied to the summit of cape Senubing instead of Senua island, for which it may have been mistaken, it would place the vessel on the easternmost of the Penungul reefs, as already described.

The name of Devonport reef has therefore been transferred to the Eastern Penungul reef, the former Devonport reef being expunged.

Also, that a search for Montrado or Menterado breakers has also been made, but that no indication of its existence could be found, depths of from 40 to 50 fathoms being found over the position assigned to it. It has therefore been expunged from the charts.

Approximate position, lat. 3° 31′ N., long. 108° 4′ E.

(Variation 2° Easterly in 1906.)

This Notice affects the following Admiralty Charts:—China Sea, No. 2660a; Natuna islands, No. 1348: Also China Sea Directory, Vol. II, 1906, page 94.

CHINA, EAST COAST—Hong-Kong.

Wrecks in approaches.

No. 492 (second publication).—The British Admiralty has given notice (No. 1367 of 1906) that the undermentioned wrecks are reported to exist in the track of vessels in the approaches to Hong-Kong:—

Eastern approach—

A mast about 6 feet above water, apparently attached to a large vessel, lies sunk in a depth of 14 fathoms in approximately lat. 22° 14′ 30″ N., long. 114° 26′ 50″ E.

Western approach—

A mast about 5 feet above water, apparently attached to a large junk, lies sunk in a depth of 7 fathoms in approximately lat. 22° 11′ 10″ N., long. 114° 4′ 25″ E., on chart No. 1180.

Mariners are warned that, consequent on the typhoon which occurred in September last, there may be other wrecks in the vicinity of Hong-Kong.

This Notice affects the following Admiralty Charts:—Hailing to Hong-Kong harbour No. 2212; Hong-Kong to the Brothers, No. 1962; Macao to Pedro Blanco, No. 3026; approaches to Hong-Kong, No. 1180; Also China Sea Directory, vol. III, 1904, pages 65, 61, 127.

AFRICA, EAST—Zanzibar island, north coast.

Kokotoni harbour—Buoyage of entrances.

No. 493 (second publication).—The British Admiralty has given notice No. 1369 of 1906 that the entrances to Kokotoni harbour have been buoyed as follows:—

Western entrance—

(1) A red can buoy surmounted by a staff and red flag has been moored in a depth of 4 fathoms to the northward of Ras Oswawembo in a position situated at a distance of 4 1/10 miles S. 85° W. from Pale House.

(2) Two red cask buoys have been placed on the southern side of the channel situated respectively at distances of 4 1/10 miles S. 86° W., and 3½ miles S. 79° W. from Pale House.

(3) Two black cask buoys have been placed on the northern side of the channel situated respectively at distances of $3\frac{5}{10}$ miles S. 89° W. and $2\frac{1}{10}$ miles S. 82° W. from Pale House.

NORTHERN ENTRANCE—

A red barrel has been placed on the eastern edge of the reef extending from Pungo island, situated at a distance of $8\frac{1}{10}$ miles N. 6° E. from Pale House.

Approximate position, Pale House, lat. 5° 52½′ S., long. 39° 15¾′ E.

PACIFIC OCEAN—HAWAIIAN OR SANDWICH ISLANDS.

Honolulu harbour channel.—Lighting of dredged channel.

No. 489 (third publication).—The British Admiralty has given notice (No. 1360 of 1906) that, on 5th December 1906, the undermentioned lantern lights will be established to mark the dredged channel into Honolulu harbour, as follows:—

a. A *white fixed* light, on a single pile beacon (No. 3), erected in a depth of 8 feet, at a distance of $5\frac{5}{10}$ cables S. 21° W. from the Harbour light.

b. A *red fixed* light, on a single pile beacon (No. 4), erected in a depth of 25 feet; at a distance of 5½ cables S. 12° W. from the harbour light.

c. A *white fixed* light, on a single pile beacon (No. 5), erected in a depth of 14 feet, at a distance of $4\frac{1}{10}$ cables S. 23° W. from the harbour light.

d. A *red fixed* light, on a single pile beacon (No. 6), erected in a depth of 18 feet, at a distance of $4\frac{1}{10}$ cables S. 12° W. from the harbour light.

e. A *white fixed* light on a single pile beacon (No. 7), erected in a depth of 12 feet, at a distance of 505 yards S. 23° W. from the harbour light.

f. A *red fixed* light, on a single pile beacon (No. 8), erected in a depth of 20 feet, at a distance of 527 yards S 4° W. from the Harbour light.

The above lights are each elevated 11 feet above high water, the beacons being erected about 70 feet out side the edge of the channel on either side.

Approximate position, Harbour light, lat. 21° 18′ N., long. 157° 52½′ W.

The above position refer to chart No. 1378.

CHINA SEA—THE PHILIPPINE ISLANDS—LUZON, EAST COAST—ALBAY GULF.

Rapurapu strait—Beacons and buoys established.

No. 490 (third publication).—The British Admiralty has given notice (No. 1361 of 1906) that the undermentioned beacons and buoys have been established to facilitate the navigation of Rapurapu strait as follows:—

(*a*) Two beacons have been erected on Rapurapu island, the rear beacon being in the shape of a white triangle, point downwards, about 13 feet high, erected about 100 feet within the coast line, and the front beacon a white triangle, point upwards, erected on the edge of the reef 14 feet above high water, both beacons having a black vertical stripe passing through their centres.

These two beacons in line S. 6° W. lead through the channel eastward of Middle reef. They have been placed on the chart at distances of $2\frac{1}{2}$ miles and $2\frac{4}{10}$ miles S. 8° W. respectively from East point.

(*b*) A red conical buoy, marked No. 2, has been placed in a depth of 4 fathoms off the southern edge of Dickerson or Derickson reef, situated at a distance of $2\frac{2}{10}$ miles S. 28° W. from East point.

(*c*). A red conical buoy, marked No. 4, has been placed in a depth of 4 fathoms on the south-eastern edge of Columbia reef, situated at a distance of $4\frac{4}{10}$ miles S. 48° W. from East point.

Approximate position, East point, lat. 13° 15¾′ N., long. 124° 6¼′ E.

CHINA SEA—NATUNA ISLANDS.

Devonport reef—Probable position.—Montrado (Menterado) breakers—Non-existence of.

No. 491 (third publication).—The British Admiralty has given notice (No. 1366 of 1906) that a search has been made for Devonport reef in approximately lat. 3° 54½′ N., long. 108° 31½′ E., without any indication of its existence being discovered.

It is thought probable that the ship *Devonport* was lost on the easternmost of the Penungul reefs, on which a depth of 2½ fathoms has been recently found to exist in approximately lat. 3° 52¾′ N., long. 108° 29′ E. From this position the bearing of Kamodi island (S.W. by W.) is the same as that given to fix the position of the Devonport; and if the second bearing (N.W.) given by the Devonport be applied to the summit of cape Senubing instead of Senua island, for which it may have been mistaken, it would place the vessel on the easternmost of the Penungul reefs, as already described.

The name of Devonport reef has therefore been transferred to the Eastern Penungul reef, the former Devonport reef being expunged.

Also, that a search for Montrado or Menterado breakers has also been made, but that no indication of its existence could be found, depths of from 40 to 50 fathoms being found over the position assigned to it. It has therefore been expunged from the charts.

Approximate position, lat. 3° 31′ N., long. 108° 4′ E.

(*Variation 2° Easterly in 1906.*)

This Notice affects the following Admiralty Charts;—China Sea, No. 2660a; Natuna islands, No. 1548: Also China Sea Directory, Vol. II, 1906, page 94.

CHINA, EAST COAST—HONG-KONG.

Wrecks in approaches.

No. 492 (third publication).—The British Admiralty has given notice (No. 1367 of 1906) that the undermentioned wrecks are reported to exist in the track of vessels in the approaches to Hong-Kong:—

EASTERN APPROACH—

A mast about 6 feet above water, apparently attached to a large vessel, lies sunk in a depth of 14 fathoms in approximately lat. 22° 14′ 30″ N., long. 114° 26′ 50″ E.

WESTERN APPROACH—

A mast about 5 feet above water, apparently attached to a large junk, lies sunk in a depth of 7 fathoms in approximately lat. 22° 11′ 10″ N., long. 114° 4′ 25″ E., on chart No. 1180.

Mariners are warned that, consequent on the typhoon which occurred in September last, there may be other wrecks in the vicinity of Hong-Kong.

This Notice affects the following Admiralty Charts:—Huiling to Hong-Kong harbour No. 2212; Hong-Kong to the Brothers, No. 1962; Macao to Pedro Blanco, No. 3026; approaches to Hong-Kong, No. 1180: Also China Sea Directory, vol. III, 1904, pages 60, 61, 127.

This Notice affects the following Admiralty Chart:—Penang harbour, No. 1386: Also, List of Lights, part VI, 1906, No. 412; and China Sea Directory, vol. I, 1896, page 147.

PACIFIC OCEAN, SOUTH—SOCIETY ISLANDS—TAHITI.

Papiete searbour—Beacon replaced by mast.

No. 20 (second publication).—The British Admiralty has given notice (No. 1447 of 1906) that the white pyramidal beacon from which the rear leading light (*red fixed*) into Papiete harbour was exhibited has been replaced by an iron mast, painted white, from which a *red fixed* light is exhibited at an elevation of 76 feet above high water and 69 feet above the ground.

Approximate position, lat. 17° 32½′ S., long. 149° 34′ W.

This Notice affects the following Admiralty Chart:—Papieté pass to Papenu pass, No. 1158: Also List of Lights, Part VII, 1906, No. 615; Pacific Islands, vol. III, 1900, page 60; and Supplement, 1903, page 5.

KOREA, WEST COAST—YALU KIANG APPROACH.

Teifaato light—Not exhibited during winter months.

No. 21 (second publication).—With reference to Notice to Mariners No. 4, dated 4th January 1907, issued by this office, the British Admiralty has given further notice (No. 1418 of 1906) that during the winter season, from about the 15th November to about the end of March, the *white flashing* light, *every eighteen seconds*, on the western end of Teifaato, in the southern approach to Yalu kiang, will not be exhibited owing to the prevalence of ice in the locality.

Approximate position, lat. 39° 26½′ N., long. 124° 35′ E.

This Notice temporarily affects the following Admiralty Charts:—Hong Kong to Liau tung gulf, No. 1262; Nipon, etc., No. 2347; Pechili and Liau tung gulfs, No. 1356; approaches to Ping yang inlet, No. 1357: Also List of Lights, Part VI, 1905, page 149; and Sailing Directions for Japan and Korea, etc., 1904, page 89.

JAPAN—YEZO (HONSHU), SOUTH COAST.

Yerimo zaki—Non-existence of shoal reported on the south-westward.

No. 22 (second publication).—With reference to Notice to Mariners No. 58, dated 6th March 1896, issued by this office, the British Admiralty has given further notice (No. 1449 of 1906) that a careful search has been made over an area of about one mile around the assigned position of the 5-fathom shoal reported in 1895 to exist at a distance of 18 miles S. 79° W. from Yerimo zaki without success.

This area was swept over without finding any indication of the existence of rocks, the depths obtained being from 68 to 72 fathoms over a mud bottom; it is not considered therefore that this shoal exists, and it has consequently been erased from the charts.

Approximate position, lat. 41° 51′ N., long. 142° 53′ E.

(*Variation 4° Westerly in 1906.*)

This Notice affects the following Admiralty Charts:—Pacific ocean, No. 2459; Kuril islands, No. 2405: Yezo island, No. 452: Also Sailing Directions for Japan, Korea, etc., 1904, page 730.

The present White Light on the end of the Wharf will be moved about three (3) feet westward, and be changed to a Red Light. The existing Red Light at the back will be changed to a bright light. These lights in line will lead midway between the two Outer Beacons instead of along the Eastern side of the channel, ■ at present.

This affects Admiralty Chart 2589b and Plan 2159.

AUSTRALIA, SOUTH.—Port Adelaide River.

Outer harbour.—Signals to be observed at the Occulting buoy.

No. 13 (third publication).—The President of the Marine Board, Port Adelaide, has given notice (No. 27 of 1906) that Masters of Vessels, Pilots, and others about to enter the Port Adelaide river, shall, when at the Occulting Buoy, signal the dredgers by one prolonged blast of *30 seconds duration* on the whistle or syren, and repeat it every minute until such signal is answered from the dredgers. Vessels bound outwards shall give the same signal when abreast of No. 3 Light Beacon. Every dredger will repeat the above-mentioned signals if steam is up. If steam is not up then by waving a flag *by day* or a white light *by night*, and at the same time haul to one side of the fairway, and show the proper signals.

Masters and Pilots are cautioned to keep, as near as possible, on the line of leads so as not to pass the dredgers too close, and will also reduce speed when approaching and passing them.

This affects Admiralty Charts 2389a and b, and 1750 and 1752.

WEDNESDAY, JANUARY 30, 1907.

NOTICES TO MARINERS.

THE following Notices are published for general information.

W. A. INGLIS,
Secy to the Govt. of Bengal.

CALCUTTA, *the 30th January 1907.*

BAY OF BENGAL—BURMA COAST.

Volcanic eruptions.

No. 34 (first publication).—With reference to Notices to Mariners, Nos. 486 and 498, dated respectively, the 20th December 1906, issued by this office, the Bombay Government has given further notice (No. 4 of 1906) that the Surveyor in charge, Marine Survey of India, reports that he has made a survey of the newly-formed Volcanic Island to northward of Cheduba, and places the position of the summit in lat. 19° 00′ 06″ N., long. 93° 24′ 20″ E.

The summit of the island is 19 feet above high water, and the island has a greatest length of 307 yards in a S. S. W. and N. N. E. direction and a greatest breadth of 217 yards in a N. W. and S. E. direction.

There is an appearance of shoal water off the end of the island owing to mud being washed away by the sea and having a wake. But except in the close proximity of the island, there appears to be no change in the soundings in the neighbourhood.

An iron socket with a pole and flag has been erected on the summit of the island.

This notice affects Admiralty Charts Nos. 852, 821, 822, 829 and 70: Also Bay of Bengal Pilot, page 265.

CHINA—YANG TSE KIANG, NORTH CHANNEL.

The Calcutta Gazette.

WEDNESDAY, FEBRUARY 6, 1907.

NOTICES TO MARINERS.

THE following Notices are published for general information.

W. A. INGLIS,
Secy. to the Govt. of Bengal.

CALCUTTA, *the 2nd February 1907.*

BAY OF BENGAL—BURMA COAST.

Akyab harbour—Shoal water in Outer bar.

No 44 (first publication).—With reference to Notice to Mariners No. 173, dated 18th May 1905, issued by this office, the Bombay Government have given further Notice (No. 5 of 1907) that the Surveyor in charge, Marine Survey of India, reports that after having made a re-survey of the Outer Bar, Akyab, it has been found that the water has shoaled in places to the extent of two feet.

There is, however, nowhere less than 21 feet, which 21 feet can be avoided by keeping well to the eastward and not passing the buoy too close.

BRITISH POSSESSIONS.

Caution when approaching British Ports.

No. 45 (first publication).—The following Notice to Mariners (No. 1 of 1907) issued by the British Admiralty is republished—

My Lords Commissioners of the Admiralty, having taken into consideration the fact that circumstances may arise in which it may be necessary, on account of periodical exercises, manœuvres or otherwise, to forbid all entrance to the naval ports at night, this is to give Notice that on approaching the shores of Great Britain, or any British dependency, if search-lights are observed to be in constant operation, the Naval harbours should be approached with great caution, as it may be apprehended that obstructions may exist outside the port, or that the entrances may be altogether closed, and the Examination service may be in force.

In the event of relations becoming strained between this country and any Naval Power, an Examination service may come into force at the ports or localities in the United Kingdom, and His Majesty's Possessions abroad, mentioned at the end of this Notice.

Masters are warned that before attempting to enter any of these ports they must, in their own interests, strictly obey all instructions given to them by the vessels which will be charged with the duty of examining ships desiring to enter the ports, and allotting positions in which the ships shall anchor. In case of fog they should on no account attempt to enter before receiving permission from the Examination officer.

The institution of an Examination service at any port will never be publicly advertised, but at all times when the relations of Great Britain with foreign Powers are known to be in a state of tension, especial care should be taken in approaching the ports, by day or by night,

to keep a sharp look-out for the Examination steamer, and to be ready to "bring to" at once when hailed by her or warned by the firing of a gun.

If an entrance to a port is closed, three *red* vertical lights by night, or three red balls by day, will be exhibited in some conspicuous position, in or near to its approach, and as far as possible notice of this fact will be given by look-out vessels in the offing.

When the Examination service is in force the Examination steamer will be distinguished at night—

(*a*) When the port is closed, by three red vertical lights.
(*b*) When the port is open, by three white vertical lights.

The pilots attached to the ports will be acquainted with the regulations to be followed.

Gulf of Tomini—Non-existence of shoal.

No. 71 (first publication).—The British Admiralty has given notice (No. 67 of 1907) that a search has been made in the gulf of Tomini for the shoal on the chart in lat. 0° 40′ S., long. 122° 18¼′ E. without success. This shoal is locally unknown, and the authority for its existence being uncertain it has been decided to expunge it from the charts.

This Notice affects the following Admiralty Chart:—Eastern Archipelago, No. 942A: Also Eastern Archipelago, Part II, 1904, page 376.

AUSTRALIA, SOUTH—St. Vincent Gulf.

Port Adelaide—Signals to Dredgers.

No. 72 (first publication).—The British Admiralty has given notice (No. 75 of 1907) that vessels entering or leaving port Adelaide must make the following signals to give warning to the dredgers engaged at work in the channel at the entrance to port Adelaide river:—

(*a*) Inward-bound vessels when abreast of the buoy showing an occulting light at the entrance to the river must give blasts of thirty seconds' duration every minute with a whistle or siren until answered by the dredgers in a similar manner.

(*b*) Outward-bound vessels when abreast of No. 3 beacon must give the same signal as above until it is repeated by the dredgers.

If steam is not up in the dredgers, a flag will be waved by day and a white light by night, the dredgers at the same time hauling to one side of the fairway and hoisting the usual signals.

Vessels must reduce speed when approaching and passing the dredgers, and keep as nearly as possible directly on the leading lines.

Approximate position, No. 3 beacon, lat. 34° 46¾′ S., long. 138° 29′ E.

This Notice affects the following Admiralty Publication:—Australia, vol. I, 1897, page 329.

AUSTRALIA, SOUTH—St. Vincent Gulf.

Port Wakefield—Leading lights altered.

No. 73 (first publication).—The British Admiralty has given notice (No. 76 of 1907) that on November 19th the leading lights at port Wakefield would be altered as follows:—

(*a*) The front light on the wharf would be moved 3 feet to the westward and its colour changed from white to *red*.

(*b*) The colour of the rear light would be altered from red to *white*.

The above lights in line will then lead between the two outer beacons and not along the eastern side of the channel as formerly.

Approximate position, lat. 34° 11½′ S., long. 138° 8¼′ E.

This Notice affects the following Admiralty Chart:—Plan of port Wakefield on chart No. 2152: Also List of Lights, Part VI, 1906, page 205; and Australian Directory, vol II 1897, page 340.

The 8th February 1907.

BAY OF BENGAL—Burma coast.

Akyab harbour—Shoal water in Outer bar.

No 44 (second publication).—With reference to Notice to Mariners No. 174, dated 18th May 1906, issued by this office, the Bombay Government have given further Notice (No. 5 of 1907) that the Surveyor in charge, Marine Survey of India, reports that after having made a re-survey of the Outer Bar, Akyab, it has been found that the water has shoaled in places to the extent of two feet.

There is, however, nowhere less than 21 feet, which 21 feet can be avoided by keeping well to the eastward and not passing the buoy too close.

BRITISH POSSESSIONS.

Caution when approaching British Ports.

No. 45 (second publication).—The following Notice to Mariners (No. 1 of 1907) issued by the British Admiralty is republished—

My Lords Commissioners of the Admiralty, having taken into consideration the fact that circumstances may arise in which it may be necessary, on account of periodical exercises,

manœuvres or otherwise, to forbid all entrance to the naval ports at night, this is to give Notice that on approaching the shores of Great Britain, or any British dependency, if search-lights are observed to be in constant operation, the Naval harbours should be approached with great caution, as it may be apprehended that obstructions may exist outside the port, or that the entrances may be altogether closed, and the Examination service may be in force.

In the event of relations becoming strained between this country and any Naval Power, an Examination service may come into force at the ports or localities in the United Kingdom, and His Majesty's Possessions abroad, mentioned at the end of this Notice.

Masters are warned that before attempting to enter any of these ports they must, in their own interests, strictly obey all instructions given to them by the vessels which will be charged with the duty of examining ships desiring to enter the ports, and allotting positions in which the ships shall anchor. In case of fog they should on no account attempt to enter before receiving permission from the Examination officer.

The institution of an Examination service at any port will never be publicly advertised, but at all times when the relations of Great Britain with foreign Powers are known to be in a state of tension, especial care should be taken in approaching the ports, by day or by night, to keep a sharp look-out for the Examination steamer, and to be ready to "bring to" at once when hailed by her or warned by the firing of a gun.

If an entrance to a port is closed, three *red* vertical lights by night, or three red balls by day, will be exhibited in some conspicuous position, in or near to its approach, and as far as possible notice of this fact will be given by look-out vessels in the offing.

If the Examination service is in force the Examination steamer will be distinguished at night—

(*a*) When the port is closed, by three red vertical lights.
(*b*) When the port is open, by three white vertical lights.

The pilots attached to the ports will be acquainted with the regulations to be followed.

EASTERN ARCHIPELAGO—CELEBES, WEST COAST—MAKASSAR ROAD.

Hoofd reef—Buoy replaced by light-buoy.

No. 46 (second publication).—The British Admiralty has given notice (No. 5 of 1907) that the black conical buoy surmounted by ball marking Hoofd reef, Makassar road, has been replaced by a light buoy, painted black, exhibiting a *red fixed* light.

Approximate position, lat. 5° 7¼′ S., long. 119° 24′ E.

This Notice affects the following Admiralty Charts:—Approach to Makassar, No. 1895; Makassar road, No. 2662: Also Eastern Archipelago, Part II, 1904, page 567; and Supplement, 1906, page 16.

EASTERN ARCHIPELAGO—MOLUCCA ARCHIPELAGO—TANIMBAR (TENIMBAR) ISLANDS.

Yamdena strait—Shoal in western approach.

No. 47 (second publication).—The British Admiralty has given notice (No. 6 of 1907) of the existence of a shoal, with a depth of 6 fathoms over it, in the western approach to

Yamdena strait, Tanimbar islands, situated in a position from which Jojaru island bears S. 64° E., distant 4 miles, and the northern point of Sekelur islands N. 72° E.

Approximate position on chart No. 942*b*, lat. 7° 39′ S., long. 130° 51′ E.

(*Variation 2° Easterly in 1907.*)

This Notice affects the following Admiralty Chart:—Eastern Archipelago, No. 942b; Also Eastern Archipelago, Part I 1903, page 494; and Supplement, 1906, page 44.

EASTERN ARCHIPELAGO—MADURA STRAIT.

Pasuruan light—Character altered.

No. 48 (second publication).—With reference to Notice to Mariners, No. 384, dated 12th October 1906, issued by this office, the British Admiralty has given further Notice (No. 8 of 1907) that the character of the Pasuruan light in Madura strait has been altered from white fixed to *white group occulting every thirty seconds*, thus:—light, *three seconds*; eclipse, *three seconds*; light, *twelve seconds*; eclipse, *twelve seconds*.

Approximate position, lat. 7° 37′ S., long. 112° 55′ E.

The light is of the 4th order, but the distance it is visible is not stated.

This Notice affects the following Admiralty Charts:—Australia, No. 2759a; Eastern Archipelago, No. 941b; island of Java, eastern portion, No. 1654; Also, List of Lights, Part VI, 1906, No. 500; and Eastern Archipelago, Part II, 1904, page 134.

PACIFIC OCEAN—NEW GUINEA, SOUTH COAST—ARU ISLANDS, DOBBA HARBOUR APPROACH.

Wasir strait—Shoal.

No. 49 (second publication).—The British Admiralty has given notice (No. 13 of 1907) of the existence of a reef (composed of sand and stones), with a least depth of 4 fathoms over it, in Wasir strait, situated in a position from which the south point of Wasir bears S. 64° W., distant 2¼ miles, and the north-eastern point of the same island N. 26° W.

Approximate position, lat. 5° 31¾′ S., long. 134° 17¾′ E.

Discoloured water extends in a south-westerly direction from the shoals, and the soundings in the southern part of the strait are irregular. Vessels are therefore recommended to avoid passing between Ujir and Wasir islands.

Akyab harbour—Shoal water in Outer bar.

No. 44 (third publication).—With reference to Notice to Mariners No. 174, dated 18th May 1906, issued by this office, the Bombay Government have given further Notice (No. 5 of 1907) that the Surveyor in charge, Marine Survey of India, reports that after having made a re-survey of the Outer Bar, Akyab, it has been found that the water has shoaled in places to the extent of two feet.

There is, however, nowhere less than 21 feet, which 21 feet can be avoided by keeping well to the eastward and not passing the buoy too close.

BRITISH POSSESSIONS.

Caution when approaching British Ports.

No. 45 (third publication).—The following Notice to Mariners (No. 1 of 1907) issued by the British Admiralty is republished—

My Lords Commissioners of the Admiralty, having taken into consideration the fact that circumstances may arise in which it may be necessary, on account of periodical exercises,

manœuvres or otherwise, to forbid all entrance to the naval ports at night, this is to give Notice that on approaching the shores of Great Britain, or any British dependency, if search-lights are observed to be in constant operation, the Naval harbours should be approached with great caution, as it may be apprehended that obstructions may exist outside the port, or that the entrances may be altogether closed, and the Examination service may be in force.

In the event of relations becoming strained between this country and any Naval Power, an Examination service may come into force at the ports or localities in the United Kingdom, and His Majesty's Possessions abroad, mentioned at the end of this Notice.

Masters are warned that before attempting to enter any of these ports they must, in their own interests, strictly obey all instructions given to them by the vessels which will be charged with the duty of examining ships desiring to enter the ports, and allotting positions in which the ships shall anchor. In case of fog they should on no account attempt to enter before receiving permission from the Examination officer.

The institution of an Examination service at any port will never be publicly advertised, but at all times when the relations of Great Britain with foreign Powers are known to be in a state of tension, especial care should be taken in approaching the ports, by day or by night, to keep a sharp look-out for the Examination steamer, and to be ready to "bring to" at once when hailed by her or warned by the firing of a gun.

If an entrance to a port is closed, three *red* vertical lights by night, or three red balls by day, will be exhibited in some conspicuous position, in or near to its approach, and as far as possible notice of this fact will be given by look-out vessels in the offing.

If the Examination service is in force the Examination steamer will be distinguished at night—

(*a*) When the port is closed, by three red vertical lights.
(*b*) When the port is open, by three white vertical lights.

The pilots attached to the ports will be acquainted with the regulations to be followed.

No. 62 (third publication).—The British Admiralty has given notice (No. 49 of 1907) that the deepest water across the bar of English river, now named Polana channel, has been recently buoyed as follows:—

The outer end of this channel is marked by a spherical buoy, surmounted by a pyramidal frame and ball, painted in black and white horizontal bands, situated at a distance of 3¼ miles N. 86° E. from Reuben point lighthouse.

Between this buoy (which can be passed on either side) and the light-buoy off Reuben point, Polana channel, is marked by four buoys placed at about equal distances apart, those on the north side of the channel being conical, coloured red, and surmounted

by a triangle, and those on the southern side being cylindrical, coloured black and surmounted by a rectangle.

There is in this channel about 2 feet more water over the bar than in other places.

Approximate position, Reuben point light, lat. 25° 58¾ S., long. 32° 36′ E.

(Variation 20° Westerly in 1907.)

This Notice affects the following Admiralty Charts:—Delagoa bay, No. 644; English river, No. 646: Also Africa Pilot, Part III, 1905, pages 199, 200.

EASTERN ARCHIPELAGO—Borneo, South coast.

Malatajor Point—Shoal southward of.

No. 63 (third publication).—The British Admiralty has given notice (No. 50 of 1907) of the existence of a shoal, with a depth of 2¼ fathoms over it, situated about 27 miles to the southward of Malatajor or Melatoar point, in approximately lat. 3° 53½′ S., long. 113° 36′ E.

This shoal, as defined by the 3-fathom contour line, extends 4 miles to the southward of the above position.

AUSTRALIA, SOUTH—ST. VINCENT GULF.

Port Adelaide—Signals to Dredgers.

No. 72 (third publication).—The British Admiralty has given notice (No. 75 of 1907) that vessels entering or leaving port Adelaide must make the following signals to give warning to the dredgers engaged at work in the channel at the entrance to port Adelaide river:—

(*a*) Inward-bound vessels when abreast of the buoy showing an occulting light at the entrance to the river must give blasts of thirty seconds' duration every minute with a whistle or siren until answered by the dredgers in a similar manner.

(*b*) Outward-bound vessels when abreast of No. 3 beacon must give the same signal as above until it is repeated by the dredgers.

If steam is not up in the dredgers, a flag will be waved by day and a white light by night, the dredgers at the same time hauling to one side of the fairway and hoisting the usual signals.

Vessels must reduce speed when approaching and passing the dredgers, and keep as nearly as possible directly on the leading lines.

Approximate position, No. 3 beacon, lat. 34° 46¾′ S., long. 138° 29′ E.

This Notice affects the following Admiralty Publication:—Australia, vol. I, 1897, page 329.

AUSTRALIA, SOUTH—ST. VINCENT GULF.

Port Wakefield—Leading lights altered.

No. 73 (third publication).—The British Admiralty has given notice (No. 76 of 1907) that on November 19th the leading lights at port Wakefield would be altered as follows:—

(*a*) The front light on the wharf would be moved 3 feet to the westward and its colour changed from white to *red*.

(*b*) The colour of the rear light would be altered from red to *white*.

The above lights in line will then lead between the two outer beacons and not along the eastern side of the channel as formerly.

AFRICA, EAST COAST—Kilimán river entrance.

Light altered—Buoyage amended—Beacons removed.

No. 101 (first publication).—The British Admiralty has given notice (No. 156 of 1907) that the following alterations have been made in the lighting and buoyage of Kilimán river:—

Light:—

A *white fixed* light, elevated 65 feet above high water, and visible in clear weather from a distance of 11 miles, has been established in a pyramidal structure, painted white, erected on Tangalane point at a distance of 1¼ cables N. 75° E. from the site of the former lighthouse, the light of which has been discontinued and the tower removed, owing to the erosion of the coast in its neighbourhood.

The new light is 57 feet above the ground.

Approximate position, lat. 18° 1½′ S., long. 36° 58½′ E.

Buoys have been established in the undermentioned positions:—

1. A black cylindrical buoy, named "Espera," or Fairway, surmounted by a staff and white cone under a black cylinder, is moored in a depth of 33 feet at a distance of 7½ miles S. 10° W. from the lighthouse.
2. A red spherical buoy, named Tangalane I, surmounted by a staff and cone, point upwards, is moored in a depth of 11 feet at a distance of 4 7/10 miles S. 16° W. from the lighthouse.
3. A black cylindrical buoy, named Cavallos Marinhos, surmounted by a staff and cylinder, is moored in a depth of 14 feet at a distance of 3 8/10 miles S. 20° W. from the lighthouse.
4. A red spherical buoy, named Tangalane II, surmounted by a staff and cone, point downwards, is moored in a depth of 14 feet at a distance of 3 miles S. 26° W. from the lighthouse.
5. A black cylindrical buoy, named Olinda, surmounted by a staff and cylinder, is moored in a depth of 15 feet at a distance of 2 miles S. 44° W. from the lighthouse.
6. A black spindle-shaped buoy, named Militao, surmounted by a cylinder, is moored in a depth of 28 feet at a distance of 8 8/10 cables N. 83° W. from the lighthouse.

In entering, red buoys are to be left to starboard and black buoys to port, after passing the Fairway (Espera) buoy, vessels may cross the bar on which the least depth at present is 11½ feet at low water.

It is presumed the other buoys have been withdrawn, though this is not expressly stated.

The beacons on Tangalane point, which formerly led over the bar, have been removed, but a flagstaff, from which bar signals are made, and a pilot station have been established on this point, the exact position of which is not given.

BAY OF BENGAL—Chittagong coast.

South Patches—Light vessel replaced in position.

No. 107 (first publication).—With reference to Notice to Mariners No. 448, dated 22nd November 1906, issued by this office, a further telegraphic communication has been received from the Port Officer, Chittagong, stating that South Patches light vessel has been replaced in position.

The 5th March 1907.

INDIA, WEST—Bombay coast.

Bombay harbour approach.—Wreck buoy on wreck of Pilot schooner No. 1 removed.

No. 86 (second publication).—With reference to Notice to Mariners, No. 294, dated 13th August 1906, issued by this office, the Bombay Government has given further notice (No. 11 of 1907) that the wreck of Pilot Schooner No. 1 being no longer an obstruction or danger to navigation the wreck buoy has been removed.

This Notice affects the following Admiralty Charts:—Arabian Sea, No. 1012, India, West Coast, Sheet I, Vengurla to Cape Comorin, No. 826; Gulf of Kutch to Vizadrug, No. 3756, India, West Coast, Sheet III, Arnala Island to Kundari, No. 757, and Bombay Harbour No. 2621; also West Coast of Hindustan Pilot, 4th edition, 1898, page 207.

CHINA, EAST COAST—Yang tse Kiang.

Alterations in lights and buoys.

No. 87 (second publication).—The British Admiralty has given notice (No. 120 of 1907) that, on or about 1st February next, the following alterations will be made in the lights and buoys in the entrance to the Yang tse Kiang:—

North channel—

(1) Liu Chiao occulting light will be discontinued.

Approximate position, lat. 31° 30′ N., long. 121° 41½′ E.

(2) Drinkwater Point light-vessel, exhibiting a *white occulting* light, will be moved 5 miles N. 85° W. to a position situated approximately in lat. 31° 24½′ N. long. 121° 5(½′ E.

(3) Drinkwater Point light-buoy, painted in red and black horizontal bands, exhibiting an *occulting* light, will be re-established at a distance of 12⅘ miles S. 87° W from Shaweishan light.

Approximate position, lat. 31° 24½′ N., long. 122° 0′ E.

(4) Chi Yao bank light-buoy, exhibiting an occulting light, will be withdrawn.

Approximate position, lat. 31° 25¼′ N., long. 121° 49′ E.

(5) A light-buoy, painted black, and named "Middle island gas buoy," will be moored to mark the southern side of the channel, at a distance of 1½ miles S. 45° W. from the site of Liu Chiao lighthouse.

Approximate position, lat. 31° 29¾′ N., long. 121° 40¼′ E.

Middle island black can buoy, about 14 cables N. 70° W., from this position, will be withdrawn.

South channel—

(*a*) A light-buoy, painted red, will be established in a depth of 30 feet at low-water springs, at a distance of 11 cables S. 41° W. from Quarantine beacon.

(*b*) A conical buoy, painted red, will be established in a depth of 30 feet at low-water springs, at a distance of 1¾ miles S. 16° E. from Quarantine beacon.

The above buoys (*a* and *b*) will mark both the limit of the quarantine anchorage and also the northern side of the channel.

(*c*) The two white buoys at present situated at distances of 9½ cables S. 56° W. and 17 cables S. 1° E., respectively, from Quarantine beacon will be withdrawn.

Approximate position, Quarantine beacon, lat. 31° 26½′ N., long. 121° 31¾′ E.

(*Variation 5° Westerly in 1907.*)

NOTE.—Changes in the river-bed before the date given for their establishment may make it necessary to select other positions for the above buoys: the positions given above are therefore only approximate.

This Notice affects the following Admiralty Charts:—Kueshan islands to Yang tse Kiang, No. 1199; approaches to Yang tse Kiang, No. 1098; Woosung river approaches, No. 3585: Also List of Lights, Part VI, 1906, No. 814, page 153: and China Sea Directory, vol. III, 1904, pages 402, 403, 409.

EASTERN ARCHIPELAGO—BORNEO, EAST COAST.

Sibuko bay—Hand rock—Beacon erected.

No. 112 (first publication).—With reference to Notice to Mariners No. 150, dated 4th May 1903, issued by this office, the British Admiralty has given further notice (No. 185 of 1907) that a steel beacon with a top mark has been placed on Hand rock in Sibuko bay.

Approximate position, lat. 4° 8½′ N., long. 118° 11′ E.

It is presumed that the conical buoy marking this danger has been withdrawn.

This Notice affects the following Admiralty Charts :—Sulu archipelago, No. 2576; Sibuko bay, No. 1681 : Also, Eastern Archipelago, part I, 1903, page 213 ; and Supplement, 1906, page 15.

EASTERN ARCHIPELAGO—GILLOLO PASSAGE.

Ardassier island—Non-existence of—Amended positions of shoals.

No. 113 (first publication).—The British Admiralty has given notice (No. 188 of 1907) of the non-existence of the undermentioned island, and that the positions of certain shoals in Gillolo passage have been amended as follows :—

1. Ardassier island. This island was reported by the ship *Ardassier* in 1808; its assigned position, however, has been passed over by the ships *City of Hankow* in 1900, and by the *Emilia* in 1901, without any indication of land being seen; it is considered therefore that it does not exist, and it has in consequence been expunged from the charts.

Approximate position, lat. 0° 42′ N., long. 129° 1½′ E.

2. Ormsby bank is situated about five miles N. 75° E. from the position shown on the chart or in approximately lat. 0° 45′ N., long. 129° 59½′ E.

The reef reported by the *Chusan* and marked P.D. on the chart and shown at a distance of 17 miles N. 22° E. from Saiang island is situated approximately in lat. 0° 36½′ N., long. 129° 57′ E. P.D. has however been retained against this danger. In

consequence of this alteration in position, it is probable that the reef, with much less water over it, reported by the Master of the *Chusan* to exist to the northward of this (P.D.) reef, was the southern part of the Ormsby bank (*see* Eastern Archipelago, part I, 1902, page 444).

3. Hunter bank is situated about 5 miles N. 85° E. from its position as shown on the chart, or in approximately lat. 0° 20′ N., long. 129° 58½′ E.

No. 114 (first publication).—The British Admiralty has given notice (No. 189 of 1907) that Courier rock is stated to be situated at a distance of about 29 miles S. 85° E. from the northern point of Tapat island, or about 4 miles N. 26° E. from its assigned position. P.D. has been placed against it on the charts.

Approximate position, lat. 1° 14′ S., long. 127° 52½′ E.

(*Variation 2° Easterly in 1907.*)

This notice affects the following Admiralty Chart:—Eastern archipelago, No. 948a: Also, Eastern Archipelago, part I, 1902, page 438.

AUSTRALIA, SOUTH—Tasmania, south coast.

Norfolk and Blackman bays—connected by Denison canal.

No. 115 (first publication).—The British Admiralty has given notice (No. 192 of 1907), that the Denison canal which has been opened, between Norfolk and Blackman bays, is marked as follows:—

(*a*) Two beacons, structures consisting of three piles, have been erected in its approach from Dunally bay.

(*b*) Two single-pipe beacons, with diamond-shaped topmarks, have been erected on either side of the seaward entrance in Blackman bay, the northern beacon being white, and the southern beacon black.

Two similar beacons have also been erected on either side of the entrance to the canal.

(*c*) The channels from seaward in Blackman and East bay to the entrance of the canal are marked by white single-pile beacons and buoys on the northern side, and black beacons and buoys on the southern side.

A plan of Denison canal has not yet been received, and its exact position is not known, but it is stated that vessels drawing 10 feet can use this canal. There is a bridge across it, which will be opened for the passage of vessels annually from 1st April to 30th September, between sunrise and sunset, and from 1st October to 31st March, from 6 A.M. to 6 P.M.

The canal is in charge of a Superintendent, whose directions must be followed by Mariners desirous of passing through it.

Gulf of Boni—Reefs.

No. 100 (second publication).—The British Admiralty has given notice (No. 155 of 1907) of the existence of the undermentioned coral reefs in the following positions in the gulf of Boni:—

(*a*) A reef, which dries, in approximately lat. 3° 45′ S., long. 121° 2′ 45″ E. This reef is one mile long in a north-north-westerly and south-south-easterly direction.

(*b*) A reef, which dries, in approximately lat. 3° 42′ 40″ S., long. 120° 59′ 40″ E. This reef is about half a mile long in a north-north-westerly and south-south-easterly direction.

(*c*) A reef, which dries, in approximately lat. 3° 42′ 30″ S., long 120° 57′ 40″ E. This reef is about one mile long in a north-westerly and south-easterly direction, and has a sand bank about 4 feet above water on its south-eastern edge.

(*d*) The reef shown on the chart, with a depth of less than 6 feet over it, in approximately lat. 3° 40¼′ S., long. 120° 55′ E., dries, and is about 2 miles long in a north-westerly and south-easterly direction.

(*e*) A reef, which dries, in approximately lat. 3° 38′ 15″ S., long. 120° 54′ 25″ E. This reef is about 5 cables long in a northerly and southerly direction.

(*f*) A reef, which dries, in approximately lat. 3° 34′ 30″ S., long. 120° 54′ E. This reef is about half a mile long in a north-north-westerly and south-south-easterly direction. A similar reef exists at a distance of half a mile S. 19° W. from this position.

(*g*) A reef, about half a mile long, extending from the shore in approximately lat. 3° 29⅔′ S., long. 120° 53¼′ E.

(*Variation 2° Easterly in 1907.*)

This Notice affects the following Admiralty Charts:—China sea, No. 1265; Eastern Archipelago, western portion, No. 941b; Eastern Archipelago, eastern portion, No. 942a: Also, Eastern Archipelago, Part II, 1904, page 354; and Supplement, 1906, page 90.

AFRICA, EAST COAST—KILIMAN RIVER ENTRANCE.

Light altered—Buoyage amended—Beacons removed.

No. 101 (second publication).—The British Admiralty has given notice (No. 156 of 1907) that the following alterations have been made in the lighting and buoyage of Kilimán river:—

Light:—

A *white fixed* light, elevated 65 feet above high water, and visible in clear weather from a distance of 11 miles, has been established in a pyramidal structure, painted white, erected on Tangalane point at a distance of 1¾ cables N. 75° E. from the site of the former lighthouse, the light of which has been discontinued and the tower removed, owing to the erosion of the coast in its neighbourhood.

The new light is 57 feet above the ground.

Approximate position, lat. 18° 1¼′ S., long. 36° 58¾′ E.

Buoys have been established in the undermentioned positions:—

1. A black cylindrical buoy, named "Espera," or Fairway, surmounted by a staff and white cone under a black cylinder, is moored in a depth of 33 feet at a distance of 7½ miles S. 10° W. from the lighthouse.
2. A red spherical buoy, named Tangalane I, surmounted by a staff and cone, point upwards, is moored in a depth of 11 feet at a distance of 4$\frac{9}{10}$ miles S. 16° W. from the lighthouse.
3. A black cylindrical buoy, named Cavallos Marinhos, surmounted by a staff and cylinder, is moored in a depth of 14 feet at a distance of 3$\frac{9}{10}$ miles S. 20° W. from the lighthouse.
4. A red spherical buoy, named Tangalane II, surmounted by a staff and cone, point downwards, is moored in a depth of 14 feet at a distance of 3 miles S. 26° W. from the lighthouse.
5. A black cylindrical buoy, named Olinda, surmounted by a staff and cylinder, is moored in a depth of 15 feet at a distance of 2 miles S. 44° W. from the lighthouse.
6. A black spindle-shaped buoy, named Militao, surmounted by a cylinder, is moored in a depth of 28 feet at a distance of 8$\frac{4}{10}$ cables N. 83° W. from the lighthouse.

In entering, red buoys are to be left to starboard and black buoys to port, after passing the Fairway (Espera) buoy, vessels may cross the bar on which the least depth at present is 11¼ feet at low water.

It is presumed the other buoys have been withdrawn, though this is not expressly stated.

The beacons on Tangalane point, which formerly led over the bar, have been removed, but a flagstaff, from which bar signals are made, and a pilot station have been established on this point, the exact position of which is not given.

Addition to system of Typhoon and Storm signals.

No. 122 (first publication).—With reference to Notice to Mariners No. 444, dated 13th, November 1906, issued by this office, the British Admiralty has given further notice (No. 202 of 1907) that on 1st January 1907 a signal giving the time when the storm warning was issued from the Zi ka wei Observatory would be added to the code of storm signals contained in the abovementioned Notice. This time will, in future, be indicated by use of the shapes as given in the former Notice, hoisted at the masthead of the flagstaff and will have the following significations:—

	Shape.	Signification.
1.	Cone, point downwards	This afternoon.
2.	Ball	This morning.
3.	Diamond	Yesterday afternoon.
4.	Square	Yesterday morning.

EXAMPLE.—A cone point downwards at the masthead, a square under a cone point downwards, and over a cone point upwards, on the right yardarm, and a ball under a cone point upwards on the left yardarm denotes:—"A typhoon south of the Paracels travelling N.W. Warning issued this afternoon."

Arakan river—Depth over outer bar.

No. 125 (first publication).—With reference to Notice to Mariners No. 251, dated 18th July 1906, issued by this office, the following Notice to Mariners (No. 224 of 1907), issued by the British Admiralty, is republished:—

Information, dated 9th January 1907, has been received from the Officer in charge of the Marine Survey of India, that the result of a recent survey shows that though the outer bar has shoaled in places as much as 2 feet, yet nowhere is there at the present time less than 21 feet over it at low-water springs, and that by keeping Savage island light in line with Fakir point flagstaff N. 6° W., the outer bar may be crossed in a least depth of 26 feet at low water. The note respecting the shoaling of this bar has therefore been erased from the charts.

Approximate position, lat. 20° 3′ N, long. 92° 54′ E.

Trinity Opening—Existence of reefs—Amended positions of some and non-existence of others.

No. 129 (first publication).—The British Admiralty has given Notice (No. 231 of 1907) of the existence of the undermentioned reefs, and the amended positions of and non-existence of others, in Trinity opening, as follows:—

REEFS REPORTED.

(1) A sunken coral reef, about 4 cables in extent in a northerly and southerly direction, with depths of 5 to 6 feet over it at low water, is situated about 4 miles S. 38° E. from the new position of Onyx reef, as given in paragraph 3, or in approximately lat. 16° 29′ 45″ S., long. 146° 7′ 20″ E.

(2) A sunken coral reef, half a mile in extent in an easterly and westerly direction, having a depth of 2 fathoms over it at low water is situated 5$\frac{1}{10}$ miles N. 83° E. from Pixie reef, in approximately lat. 16° 32′ 50″ S., long 146° 57′ 40″ E.

AMENDED POSITIONS.

(3) Onyx reef, which is 4 cables in extent, has a least depth of 2½ fathoms over it and is situated half a mile S. 38° E. from its position as formerly shown on the chart, or in approximately lat. 16° 26′ 20″ S., long. 146° 5′ 10″ E.

(4) The 3-fathom patch shown on the chart in lat. 16° 32′ S., long. 146° 8½′ E., is situated about half a mile to the north-eastward of this position, its centre, which is its shoalest part, being in approximately lat. 16° 31′ 45″ S., long. 146° 8′ 45″ E. This reef is three-quarters of a mile in extent in a north-north-westerly and south south easterly direction.

(5) The two small reefs, shown on the chart at distances of 3½ and 4½ miles N. 30° E. respectively from Pixie reef, do not exist.

Shoals in the neighbourhood of Foul Island, north-ward of Sandoway.

No. 130 (first publication).—The Bombay Government has given Notice (No. 21 of 1907). Information has been received from the Surveyor in charge Marine Survey of India of the following shoals discovered in the neighbourhood of Foul Island, off the Burma Coast, to the southward of Sandoway. True bearings and distances are given from the summit of Foul Island as follows:

Vestal Shoal.—S. 78°½ E., distant 6·6 miles, least water is less than 6 feet—rock—
New Shoal.—N. 80° E., distant 9·1 miles, least water obtained was 3 fathoms—rock—probably less water—not fully examined
Brougham Shoal.—N. 16°½ E, distant 4·8 miles, least water is less than 6 feet—rock—

Carpenter Shoals—

No. 1.—N. 12°½ W.—distant 10·5 miles, least water 2¾ fathoms,—rock—
No. 2.—N. 23°½ W.—distant 12·5 miles, least water 3¾ fathoms,—stones—
No. 3.—N. 30°½ W.—distant 12·7 miles, least water 8 fathoms, coral.

Over all these shoals the sea breaks in rough weather.

EASTERN ARCHIPELAGO · GILLOLO PASSAGE.

Ardassier island—Non-existence of—Amended positions of shoals.

No. 113 (second publication) —The British Admiralty has given notice (No 188 of 1907) of the non-existence of the undermentioned island, and that the positions of certain shoals in Gillolo passage have been amended as follows : –

1. Ardassier island. This island was reported by the ship *Ardassier* in 1803; its assigned position, however, has been passed over by the ships *City of Hankow* in 1900, and by the *Emilia* in 1901, without any indication of land being seen; it is considered therefore that it does not exist, and it has in consequence been expunged from the charts.

   Approximate position, lat. 0° 42′ N., long. 129° 1½′ E.

2. Ormsby bank is situated about five miles N. 75° E. from the position shown on the chart or in approximately lat. 0° 45′ N., long. 129° 59½′ E.

The reef reported by the *Chusan* and marked P.D. on the chart and shown at a distance of 17 miles N. 22° E. from Saiang island is situated approximately in lat. 0° 36½′ N., long. 129° 57′ E. P.D. has however been retained against this danger. In

consequence of this alteration in position, it is probable that the reef, with much less water over it, reported by the Master of the *Chusan* to exist to the northward of this (P.D.) reef, was the southern part of the Ormsby bank (*see* Eastern Archipelago, part I, 1902, page 441).

3. Hunter bank is situated about 5 miles N. 85° E. from its position as shown on the chart, or in approximately lat. 0° 20′ N., long. 128° 58½′ E.

This notice affects the following Admiralty Chart:—Eastern archipelago, No 942a: Also, Eastern Archipelago, part I, 1902, page 438.

AUSTRALIA, SOUTH—Tasmania, south coast.

Norfolk and Blackman bays—connected by Denison canal.

No. 115 (second publication).—The British Admiralty has given notice (No. 192 of 1907) that the Denison canal which has been opened, between Norfolk and Blackman bays, is marked as follows:—

(*a*) Two beacons, structures consisting of three piles, have been erected in its approach from Dunally bay.

(*b*) Two single-pipe beacons, with diamond-shaped topmarks, have been erected on either side of the seaward entrance in Blackman bay, the northern beacon being white, and the southern beacon black.

Two similar beacons have also been erected on either side of the entrance to the canal.

(*c*) The channels from seaward in Blackman and East bay to the entrance of the canal are marked by white single-pile beacons and buoys on the northern side, and black beacons and buoys on the southern side.

A plan of Denison canal has not yet been received, and its exact position is not known, but it is stated that vessels drawing 10 feet can use this canal. There is a bridge across it, which will be opened for the passage of vessels annually from 1st April to 30th September, between sunrise and sunset, and from 1st October to 31st March, from 6 A.M. to 6 P.M.

The canal is in charge of a Superintendent, whose directions must be followed by Mariners desirous of passing through it.

AFRICA, NORTH-EAST—Gulf of Aden.

Obokh—Alteration in buoyage.

No. 117 (second publication).—The British Admiralty has given notice (No. 198 of 1907) that the following alterations have been made in the buoyage of Obokh:—

1. The light-buoy marking the eastern extremity of Laolochateria bank has been replaced by a black buoy from which a light is occasionally exhibited.
2. A white buoy has been established off the western end of Surcou (Surcouf) bank; it has been placed on the chart at a distance of 7½ cables S. 82° E. from South island centre.

There are now no other buoys except the above in the port. The white buoy marking Pearl bank, and the black buoy a quarter of a mile to the westward of it, have therefore been expunged from the chart.

Approximate position, South island, lat. 11° 57′ N., long. 43° 17′ E.

AFRICA, EAST COAST—Kiliman river entrance.

Light altered—Buoyage amended—Beacons removed.

No. 101 (third publication).—The British Admiralty has given notice (No. 156 of 1907) that the following alterations have been made in the lighting and buoyage of Kilimán river:—

Light:—

A *white fixed* light, elevated 65 feet above high water, and visible in clear weather from a distance of 11 miles, has been established in a pyramidal structure, painted white, erected on Tangalane point at a distance of 1¼ cables N. 75° E. from the site of the former lighthouse, the light of which has been discontinued and the tower removed, owing to the erosion of the coast in its neighbourhood.

The new light is 57 feet above the ground.

Approximate position, lat. 18° 1¼′ S., long. 36° 58½′ E.

Buoys have been established in the undermentioned positions:—

1. A black cylindrical buoy, named "Espera," or Fairway, surmounted by a staff and white cone under a black cylinder, is moored in a depth of 33 feet at a distance of 7½ miles S. 10° W. from the lighthouse.
2. A red spherical buoy, named Tangalane I, surmounted by a staff and cone, point upwards, is moored in a depth of 11 feet at a distance of 4$\frac{9}{10}$ miles S. 16° W. from the lighthouse.
3. A black cylindrical buoy, named Cavallos Marinhos, surmounted by a staff and cylinder, is moored in a depth of 14 feet at a distance of 3$\frac{9}{10}$ miles S. 20° W. from the lighthouse.
4. A red spherical buoy, named Tangalane II, surmounted by a staff and cone, point downwards, is moored in a depth of 14 feet at a distance of 3 miles S. 28° W. from the lighthouse.
5. A black cylindrical buoy, named Olinda, surmounted by a staff and cylinder, is moored in a depth of 15 feet at a distance of 2 miles S. 44° W. from the lighthouse.
6. A black spindle-shaped buoy, named Militar, surmounted by a cylinder, is moored in a depth of 28 feet at a distance of 8$\frac{4}{10}$ cables N. 83° W. from the lighthouse.

In entering, red buoys are to be left to starboard and black buoys to port, after passing the Fairway (Espera) buoy, vessels may cross the bar on which the least depth at present is 11½ feet at low water.

It is presumed the other buoys have been withdrawn, though this is not expressly stated.

The beacons on Tangalane point, which formerly led over the bar, have been removed, but a flagstaff, from which bar signals are made, and a pilot station have been established on this point, the exact position of which is not given.

QUEENSLAND—BARRIER REEF.

Trinity Opening—Existence of reefs—Amended positions of some and non-existence of others.

No. 129 (second publication).—The British Admiralty has given Notice (No. 231 of 1907) of the existence of the undermentioned reefs, and the amended positions of and non-existence of others, in Trinity opening, as follows:—

REEFS REPORTED.

(1) A sunken coral reef, about 4 cables in extent in a northerly and southerly direction, with depths of 5 to 6 feet over it at low water, is situated about 4 miles S. 38° E. from the new position of Onyx reef, as given in paragraph 3, or in approximately lat. 16° 29′ 45″ S., long. 146° 7′ 20″ E.

(2) A sunken coral reef, half a mile in extent in an easterly and westerly direction, having a depth of 2 fathoms over it at low water is situated 5$\frac{1}{10}$ miles N. 83° E. from Pixie reef, in approximately lat. 16° 32′ 50′ S., long 145°, 57′ 40″ E.

AMENDED POSITIONS.

(3) Onyx reef, which is 4 cables in extent, has a least depth of 2½ fathoms over it and is situated half a mile S. 35° E. from its position as formerly shown on the chart, or in approximately lat. 16° 26′ 20″ S., long. 146° 5′ 10″ E.

(4) The 3-fathom patch shown on the chart in lat. 16° 32′ S., long. 146° 8½′ E., is situated about half a mile to the north-eastward of this position, its centre, which is its shoalest part, being in approximately lat. 16° 31′ 45″ S., long. 146° 8′ 40″ E. This reef is three-quarters of a mile in extent in a north-north-westerly and south-south easterly direction.

(5) The two small reefs, shown on the chart at distances of 3¾ and 4¾ miles N. 30° E. respectively from Pixie reef, do not exist.

Shoals in the neighbourhood of Foul Island, north-ward of Sandoway.

No. 180 (second publication).—The Bombay Government has given Notice (No. 21 of 1907). Information has been received from the Surveyor in charge Marine Survey of India of the following shoals discovered in the neighbourhood of Foul Island, off the Burma Coast, to the southward of Sandoway. True bearings and distances are given from the summit of Foul Island as follows:

Vestal Shoal.—S. 78°½ E., distant 6·6 miles, least water is less than 6 feet—rock—
New Shoal.—N. 80° E., distant 9·1 miles, least water obtained was 3 fathoms rock—probably less water—not fully examined.
Brougham Shoal.—N. 15°½ E., distant 4·8 miles, least water is less than 6 feet—rock—

Carpenter Shoals—

No. 1.—N. 12°½ W.—distant 10·6 miles, least water 2¾ fathoms,—rock—
No. 2.—N. 23°½ W.—distant 12·5 miles, least water 3¼ fathoms,—stones—
No. 3.—N. 30°½ W.—distant 12·7 miles, least water 8 fathoms, coral.

Over all these shoals the sea breaks in rough weather.

EASTERN ARCHIPELAGO—GILLOLO PASSAGE.

Ardassier island—Non-existence of—Amended positions of shoals.

No. 113 (third publication).—The British Admiralty has given notice (No 186 of 1907) of the non-existence of the undermentioned island, and that the positions of certain shoals in Gillolo passage have been amended as follows :—

1. Ardassier island. This island was reported by the ship *Ardassier* in 1808; its assigned position, however, has been passed over by the ships *City of Hankow* in 1900, and by the *Emilia* in 1901, without any indication of land being seen; it is considered therefore that it does not exist, and it has in consequence been expunged from the charts.

Approximate position, lat. 0° 42′ N., long. 129° 1½′ E.

2. Ormsby bank is situated about five miles N. 75° E. from the position shown on the chart or in approximately lat. 0° 45′ N., long. 129° 59½′ E.

The reef reported by the *Chusan* and marked P.D. on the chart and shown at a distance of 17 miles N. 22° E. from Saiang island is situated approximately in lat. 0° 36½′ N., long. 129° 57′ E. P.D. has however been retained against this danger. In

consequence of this alteration in position, it is probable that the reef, with much less water over it, reported by the Master of the *Chusan* to exist to the northward of this (P.D.) reef, was the southern part of the Ormsby bank (*see* Eastern Archipelago, part I, 1902, page 444').

3. Hunter bank is situated about 5 miles N. 85° E. from its position as shown on the chart, or in approximately lat. 0° 20′ N., long. 129° 58½′ E.

No. 114 (third publication).—The British Admiralty has given notice (No. 189 of 1907) that Courier rock is stated to be situated at a distance of about 29 miles S. 85° E. from the northern point of Tapat island, or about 4 miles N. 26° E. from its assigned position. P.D. has been placed against it on the charts.

Approximate position, lat. 1° 14′ S., long. 127° 52½′ E.

(*Variation 2° Easterly in 1907.*)

This notice affects the following Admiralty Chart:—Eastern archipelago, No. 942a: Also, Eastern Archipelago, part I, 1902, page 438.

AUSTRALIA, SOUTH—Tasmania, south coast.

Norfolk and Blackman bays—connected by Denison canal.

No. 115 (third publication).—The British Admiralty has given notice (No. 192 of 1907) that the Denison canal which has been opened, between Norfolk and Blackman bays, is marked as follows:—

(*a*) Two beacons, structures consisting of three piles, have been erected in its approach from Dunally bay.

(*b*) Two single-pipe beacons, with diamond-shaped topmarks, have been erected on either side of the seaward entrance in Blackman bay, the northern beacon being white, and the southern beacon black.

Two similar beacons have also been erected on either side of the entrance to the canal.

(*c*) The channels from seaward in Blackman and East bay to the entrance of the canal are marked by white single-pile beacons and buoys on the northern side, and black beacons and buoys on the southern side.

A plan of Denison canal has not yet been received, and its exact position is not known, but it is stated that vessels drawing 10 feet can use this canal. There is a bridge across it, which will be opened for the passage of vessels annually from 1st April to 30th September, between sunrise and sunset, and from 1st October to 31st March, from 6 A.M. to 6 P.M.

The canal is in charge of a Superintendent, whose directions must be followed by Mariners desirous of passing through it.

Approximate position, Dunally, lat. 42° 53¾′ S., long. 147° 48¾′ E.

PACIFIC OCEAN—The Philippine islands—Luzon, north-east coast.

Port San Vincente—Light established.

No. 116 (third publication).—The British Admiralty has given notice (No. 197 of 1907) that a *red fixed* lantern-light, elevated 12 feet above high water, and visible in clear weather from a distance of 7 miles, has been established on a concrete pillar erected in place of the beacon on the north-eastern point of the shoal extending north-eastward from San Vincente island, port San.

Approximate position, lat. 18° 31′ 10″ N., long. 122° 7′ 20″ E.

This Notice affects the following Admiralty Chart:—Port San Vincente, No. 3398: Also, List of Lights, part VI, 1907, page 127; and Eastern Archipelago, part I, 1902, page 367; Supplement, 1906, page 29; and China Sea Directory, vol. III., 1904, page 223.

AFRICA, NORTH-EAST—GULF OF ADEN.

Obokh—Alteration in buoyage.

No. 117 (third publication).—The British Admiralty has given notice (No. 198 of 1907) that the following alterations have been made in the buoyage of Obokh:—

1. The light-buoy marking the eastern extremity of Laclocheterie bank has been replaced by a black buoy from which a light is occasionally exhibited.
2. A white buoy has been established off the western end of Surcou (Surcouf) bank; it has been placed on the chart at a distance of 7½ cables S. 82° E. from South island centre.

There are now no other buoys except the above in the port. The white buoy marking Pearl bank, and the black buoy a quarter of a mile to the westward of it, have therefore been expunged from the chart.

Approximate position, South island, lat. 11° 57′ N., long. 43° 17′ E.

CAUTION WHEN APPROACHING GERMAN COASTS AND HARBOURS.

No. 168 (first publication).—The British Admiralty has given notice (No. 348 of 1907) that it may be necessary, under certain circumstances, such as manœuvres, ordinary exercises, or for other causes to prohibit entrance into German harbours by night.

Within German coastal waters, therefore, when it is seen that search-lights are in operation or signals are being made the meaning of which is not understood, the harbours must be approached with increased caution. When possible, it is recommended to anchor until daylight, as obstructions may exist outside the harbours, or the entrances may be entirely closed.

When a harbour entrance is closed, four *red* lights, placed vertically, will be exhibited from a conspicuous place in or near the approach to the harbour, and the fact of the harbour being closed will be reported to vessels approaching by patrol-ships stationed in the offing.

It will be advisable to employ pilots when the above signals are observed, as they will be acquainted with the proper course to pursue.

CAUTION WHEN APPROACHING GERMAN COASTS AND HARBOURS.

No. 168 (second publication).—The British Admiralty has given notice (No. 348 of 1907) that it may be necessary, under certain circumstances, such as manœuvres, ordinary exercises, or for other causes to prohibit entrance into German harbours by night.

Within German coastal waters, therefore, when it is seen that search-lights are in operation or signals are being made the meaning of which is not understood, the harbours must be approached with increased caution. When possible, it is recommended to anchor until daylight, as obstructions may exist outside the harbours, or the entrances may be entirely closed.

When a harbour entrance is closed, four *red* lights, placed vertically, will be exhibited from a conspicuous place in or near the approach to the harbour, and the fact of the harbour being closed will be reported to vessels approaching by patrol-ships stationed in the offing.

It will be advisable to employ pilots when the above signals are observed, as they will be acquainted with the proper course to pursue.

BURMA—ARAKAN COAST.

Chedúba island—Shoals to the southward

No. 179 (first publication).—The following Notice to Mariners (No. 390 of 1907), issued by the British Admiralty, is republished :—

Information, dated 21st February 1907, has been received from the officer in charge of the Marine Survey of India of the existence of the undermentioned shoals to the southward of Chedúba island, and particulars of others, as follows :—

(*a*) A shoal, with a depth of 3 fathoms over it, situated at a distance of $9\frac{1}{10}$ miles N. 79° E. from Foul island summit. This shoal was not thoroughly examined. There may therefore be less water.

(*b*) A shoal, with a depth of $2\frac{3}{4}$ fathoms over it (rock), situated at a distance of $10\frac{1}{4}$ miles N. 13° W. from Foul island summit.

(*c*) A shoal, with a depth of $3\frac{3}{4}$ fathoms over it (stones), situated at a distance of $12\frac{1}{2}$ miles N. 24° W. from Foul island summit.

(*d*) A bank, with a depth of 8 fathoms over it, situated at a distance of $12\frac{1}{10}$ miles N. 31° W. from Foul island summit. There may be less water on this bank.

(*e*) Vestal shoal. The least water obtained over this shoal was [redacted] feet situated at a distance of $6\frac{9}{10}$ miles S. 79° E., from Foul island summit.

(*f*) Brougham shoal. Less than 6 feet was obtained over this shoal, situated at a distance of $4\frac{6}{10}$ miles N. 14° E. from Foul island summit.

The sea breaks over the above shoals when it is rough, and there are many tide rips in this vicinity.

Approximate position, Foul island summit, lat. 18° 3′ N., long. 94° 6′ E.

CAUTION WHEN APPROACHING GERMAN COASTS AND HARBOURS.

No. 168 (third publication).—The British Admiralty has given notice (No. 348 of 1907) that it may be necessary, under certain circumstances, such as manœuvres, ordinary exercises, or for other causes to prohibit entrance into German harbours by night.

Within German coastal waters, therefore, when it is seen that search-lights are in operation or signals are being made the meaning of which is not understood, the harbours must be approached with increased caution. When possible, it is recommended to anchor until daylight, as obstructions may exist outside the harbours, or the entrances may be entirely closed.

When a harbour entrance is closed, four *red* lights, placed vertically, will be exhibited from a conspicuous place in or near the approach to the harbour, and the fact of the harbour being closed will be reported to vessels approaching by patrol-ships stationed in the offing.

It will be advisable to employ pilots when the above signals are observed, as they will be acquainted with the proper course to pursue.

Semaphore anchorage—Sunken wrecks of the "Norma" and "Jessie Darling."

No. 269 (first publication).—With reference to Notice to Mariners No. 225, dated 18th May 1907, issued by this office, the President of the Marine Board, Port Adelaide, has given further notice (No. 2 of 1907) that the sunken wrecks of the *Norma* and *Jessie Darling* are lying in a position with the Light-house on Wonga Shoal bearing East, distant one and a half miles, and the structure of the Old Light-house with fixed light bearing N.E., distant three miles approximately.

Until the obstructions are removed, or further notice is given, the S.S. *Argyle* will be moored to mark the danger S.S.W. 600 ft. from the wreck, and will show the following signals:—

By day.—Three balls on a yard 20ft above the sea, two placed vertically at one end and one at the other, the single ball being on the side nearest the wreck.

By Night.—Three white lights similarly arranged, but not the ordinary riding light.

In addition to the wreck-marking vessel mentioned above, a large conical-shaped buoy painted green, with the word "WRECK" in white letters, from which is exhibited a green occulting light, will be moored close to the south side of the abovementioned wrecks.

During the time that the wreck-marking vessel is anchored near the wrecks the pilot on turn will, from sunset to sunrise, be stationed with the launch at the wreck-marking vessel, instead of at the Signal station, and will from there proceed to carry out his duties.

Both the marks mentioned should be given a wide berth by vessels navigating the vicinity.

This affects Admiralty Charts Nos. 1752 and 2389 A & B.

Outer buoy, S. 62° E. (true).

No. 1 buoy, N. 25° W. (true).

The new buoy is painted black and white, and is on the south side of Abdulla bank. Vessels bound out will pass it on their starboard side, whilst those bound inward will pass it on their port hand.

BAY OF BENGAL—Burma coast.

Sandoway—Drunken Sailor buoy removed for the monsoon.

No. 251 (second publication).—The Principal Port Officer, Burma, has given notice, dated 18th May 1907 that the Drunken Sailor buoy off Sandoway has been removed for the south-west monsoon.

AUSTRALIA, SOUTH—Gulf St. Vincent.

Semaphore anchorage—Sunken wrecks of the "Norma" and "Jessie Darling."

No. 225 (third publication).—The President of the Marine Board, Port Adelaide has given Notice (No. 1 of 1907) that the sunken wrecks of the *Norma* and *Jessie Darling* are lying in a position with the light-house on the Wonga Shoal bearing east half-north, distant about one and three-quarter miles, and the Semaphore Jetty light-house (green) bearing east by south approximately.

Until the obstructions are removed, or further notice is given, the steam-launch *Lady Diana* will be moored to mark the danger and will show the following signals :—

BY DAY.—Three balls on a yard 20 feet above the sea, two placed vertically at one end and one at the other, the single ball being on the side nearest the wreck.

BY NIGHT.—Three white lights similarly arranged, but not the ordinary riding light

This Notice affects Admiralty Charts 2589, A and B.

BAY OF BENGAL—Burma coast.

Caution—*Volcanic eruptions—Newly-formed island.*

No. 226 (third publication).—With reference to notice to Mariners No. 34, dated 26th January 1907, issued by this office, the Principal Port Officer, Burma, has given further notice that the newly-formed volcanic island to the northward of Cheduba Island is washing away and disappearing by the action of sea. The island is now 100 yards long. On sounding round it was found that a new mud bank with 15 feet over it has formed about half a mile to the eastward with deep water between it and the Mud island. New disturbance has apparently taken place causing another shoal, as discoloured water from Mud island stretches 4 to 5 miles to south-west. Masters of vessels are hereby warned to give the island a wide berth.

St. L. S. Warden, Comdr., R.I.M.,
Port Officer, Calcutta.

Semaphore anchorage—Sunken wrecks of the "Norma" and "Jessie Darling."

No. 269 (second publication).—With reference to Notice to Mariners No. 225, dated 18th May 1907, issued by this office, the President of the Marine Board, Port Adelaide, has given further notice (No. 2 of 1907) that the sunken wrecks of the *Norma* and *Jessie Darling* are lying in a position with the Light-house on Wonga Shoal bearing East, distant one and a half miles, and the structure of the Old Light-house with fixed light bearing N.E., distant three miles approximately.

Until the obstructions are removed, or further notice is given, the S.S. *Argyle* will be moored to mark the danger S.S.W. 600 ft. from the wreck, and will show the following signals:—

By day.—Three balls on a yard 20ft above the sea, two placed vertically at one end and one at the other, the single ball being on the side nearest the wreck.

By Night.—Three white lights similarly arranged, but not the ordinary riding light.

In addition to the wreck-marking vessel mentioned above, a large conical-shaped buoy painted green, with the word "WRECK" in white letters, from which is exhibited a green occulting light, will be moored close to the south side of the abovementioned wrecks.

During the time that the wreck-marking vessel is anchored near the wrecks the pilot on turn will, from sunset to sunrise, be stationed with the launch at the wreck-marking vessel, instead of at the Signal station, and will from there proceed to carry out his duties.

Both the marks mentioned should be given a wide berth by vessels navigating the vicinity.

This affects Admiralty Charts Nos. 1752 and 2389 A & B.

Semaphore anchorage—Sunken wrecks of the "Norma" and "Jessie Darling."

No. 269 (third publication).—With reference to Notice to Mariners No. 225, dated 13th May 1907, issued by this office, the President of the Marine Board, Port Adelaide, has given further notice (No. 2 of 1907) that the sunken wrecks of the *Norma* and *Jessie Darling* are lying in a position with the Light-house on Wonga Shoal bearing East, distant one and a half miles, and the structure of the Old Light-house with fixed light bearing N.E., distant three miles approximately.

Until the obstructions are removed, or further notice is given, the S.S. *Argyle* will be moored to mark the danger S.S.W. 600 ft. from the wreck, and will show the following signals:—

By day.—Three balls on a yard 20ft above the sea, two placed vertically at one end and one at the other, the single ball being on the side nearest the wreck.

By Night.—Three white lights similarly arranged, but not the ordinary riding light.

In addition to the wreck-marking vessel mentioned above, a large conical-shaped buoy painted green, with the word "WRECK" in white letters, from which is exhibited a green occulting light, will be moored close to the south side of the abovementioned wrecks.

During the time that the wreck-marking vessel is anchored near the wrecks the pilot on turn will, from sunset to sunrise, be stationed with the launch at the wreck-marking vessel, instead of at the Signal station, and will from there proceed to carry out his duties.

Both the marks mentioned should be given a wide berth by vessels navigating the vicinity.

This affects Admiralty Charts Nos. 1752 and 2389 A & B.

JAPAN—Liu Kiu island.

Marsh reef—Non-existence of Kasari bay—Shoals in.

No. 292 (first publication).—The British Admiralty has given notice (No. 673 of 1907) that a thorough but unsuccessful search has been made for Marsh reef to the southward of Kikai zima, no bottom being obtained in and around the assigned position with from 100 to 150 fathoms of line. The local fishermen also have no knowledge of any reef in this locality with the exception of Ogame reef. It is considered, therefore, that this reef has no existence, and it has in consequence been expunged from the charts.

Approximate position, lat. 28° 12½′ N., long 129° 54½′ E.

Also, that several shoals are reported to exist in the anchorage off Akaogi, Kasari bay. Vessels must, therefore, navigate these waters with caution. A note to this effect has been placed on the chart.

Approximate position, Akaogi, lat. 28° 24½′ N., long. 129° 38½′ E.

This Notice affects the following Admiralty Charts:—China sea, No. 1963; Amoy to Nagasaki, No. 2412; Amami o sima group, No. 3573: Also Sailing Directions for Japan, etc., 1904, page 293; and Supplement, 1906, page 19.

JAPAN, SOUTH COAST—Osumi islands.

Tanega shima, south point—Bank, and non-existence of reported dangers.

No. 293 (first publication).—The British Admiralty has given notice (No. 674 of 1907) of the existence of the undermentioned bank and of the non-existence of certain reported dangers off the south point of Tanega shima:—

1. A bank named Tsuridashi, with a depth of 6½ fathoms over it, situated in a position from which Kadokura zaki ▲ bears N. 68° W., distant 17 cables, and the outer rock (56 feet) off Otake zaki N. 72° E. This bank is composed of rock and sand, and has depths of from 13 to 14 fathoms around it.
   Approximate position, lat. 30° 20½′ N., long. 130° 54½′ E.
2. A search was made for the reported danger shown on the chart at a distance of 5 miles S. 7° W. from Kadokura zaki ▲, and marked E.D., without finding any indication of shoal water, a depth of over 22 fathoms, sand and shells being obtained over the position.
3. The 8-fathom bank shown on the chart at a distance of 8 miles S. 2° E. from Kadokura zaki ▲, and marked P.D., could not be found, depths of from 28 to 45 fathoms, sand and shells being obtained over the position.

These dangers (2), (3) have, therefore, been expunged from the chart.

(Variation 5° Westerly in 1907.)

This Notice affects the following Admiralty Charts:—China sea, No. 1963; Japan, No. 2547; Amoy to Nagasaki, No. 2412; Oosumi to Kaikyo to Oshima, with plan of Osumi islands, No. 1648: Also, Sailing Directions for Japan, 1904, page 296; and Supplement, 1906, page 20.
